Contents include: Detailed index for 1986-1987; Data for November 1986 Meudon carte synoptique, Solar flares, Solar radio bursts at fixed frequencies, Solar x-ray radiation from GOES satellite, and Active prominences and filaments.

48685 **(RRK—86-41) On some propagators of a scalar wave in a (n+1)-dimensional spacetime.** Nariai, Hidekazu. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Oct 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703041.

This is a sequel to the previous paper in 1978, which dealt with propagators for a quantized scalar field in some isotropic universe. In so doing, I have used the geodesic bi-scalar $\sigma(x,x')$ obtained in our recent paper RRK 86 - 37. Our result will be useful in the dimensional regularization of a quantized scalar field in any curved spacetime of the same type.

48686 **(RRK—86-43) Number count-redshift relation in universe models with nonzero cosmological constant.** Tomita, Kenji. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Oct 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703043.

The selection of universe models has so far been performed by comparing mainly the theoretical redshift - magnitude relation with the observational data (Sandage 1961, Baum 1962, Tomita and Hayashi 1963 and Solheim 1966), but the evolutionary changes in the absolute luminosity of sources have made their unambiguous selection difficult. Loh and Spillar's (1986a, b) recent photometric data on the number count of galaxies and their redshifts are very appropriate to their selection, because the evolution of galaxies have little influence on the number count - redshift relation. In this Letter we shall extend Loh and Spillar's (1986b) analysis in the case of the cosmological constant $\Lambda = 0$ to the case of Λ not $= 0$ and show whether the Lemaitre models can be consistent with their data or not.

48687 **(UCRL—95525) Adiabatic supernova expansion into the circumstellar medium.** Band, D.L.; Liang, E.P. (Lawrence Livermore National Lab., CA (USA)). 8 Jun 1987. Contract W-7405-ENG-48. 7p. (CONF-8706201—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014241.

From 101. International Astronomics Union colloquium on interaction of supernova remnants with the interstellar medium; Penticon, Canada (8 Jun 1987).

We perform one dimensional numerical simulations with a Lagrangian hydrodynamics code of the adiabatic expansion of a supernova into the surrounding medium. The early expansion follows Chevalier's analytic self-similar solution until the reverse shock reaches the ejecta core. We follow the expansion as it evolves towards the adiabatic blast wave phase. Some memory of the earlier phases of expansion is retained in the interior even when the outer regions expand as a blast wave. We find the results are sensitive to the initial configuration of the ejecta and to the placement of grid-points. 6 refs., 2 figs.

48688 **Cometary cloud in the solar system and the Resibois—Prigogine singular invariants of motion.** Petrosky, T.Y. (Center for Studies in Statistical Mechanics, University of Texas at Austin, Austin, Texas 78712). *Journal of Statistical Physics;* **48**: No. 3, 1363-1372(Sep 1987).

A relation between nonintegrability of nonlinear dynamical systems with a continuous Fourier spectrum and irreversibility is investigated in terms of the Lie-algebraic formalism. Resibois and Prigogine's singular invariants of motion play an essential role. As an application of the formalism, we solve the restricted three-body problem for the case of nearly parabolic motion of the third body. This gives a model of the motion of a comet in the solar system. The results indicate that there is (deterministic) chaos in the motion of a comet in a nearly parabolic orbit. A possible physical implication of the chaotic motion is the existence of a cometary cloud surrounding the solar system. The theoretical results are compared with numerical results, and show good agreement.

48689 **Second catalog of gamma-ray bursts - 1978-1980 localizations from the interplanetary network.** Atteia, J.L.; Barat, C.; Hurley, K.; Niel, M.; Vedrenne, G.; Evans, W.D.; Fenimore, E.E.; Cline, T.; Desai, U.; Teegarden, B. (Centre d'Etude Spatiale des Rayonnements, Toulouse, France; Los Alamos National Lab., NM; NASA, Goddard Space Flight Center, Greenbelt, MD). *Astrophysical Journal, Supplement Series;* **64**: 305-317(May 1987).

A catalog of 84 gamma-ray bursts which occurred between September 14, 1978 and February 13, 1980 is presented. The data presented consist of earth crossing times, given to about the nearest second, and time histories, in the tens of keV to MeV range, for all 84 events, as well as localizations for 80 of the events. The localizations, derived from arrival-time analysis, are given as single error boxes, double error boxes, or annuli of location, and, where possible, have been compared to the Konus localizations. They range in size from less than a square arcminute to over 1000 square degrees. The fluences of the bursts cataloged are in the range 3 x 10 to the -7th ergs/sq cm and above. 32 references.

48690 **(AD-A—182190/9/XAB) Quadrennial review of the magnetotail.** Huang, C.Y. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). Apr 1987. 14p. NTIS, PC A02/MF A01.

Pub. in Reviews of Geophysics, Vol. 25, No. 3, 529-540(Apr 1987).

There has been a great deal of interest in the magnetotail during the past quadrennial period. This has been in part due to the passage of ISEE 3 through the distant magnetotail. The investigation of the region from 60 to 220 RE from the earth has contribut-

ed much to our understanding of tail structure and dynamical response to geomagnetic activity. As always the question of substorms and the nature of energy transfer is a focus for many publications. At the same time the region earthward of 35 RE was thoroughly investigated, using observations gained by the ISEE 1 and 2, and IMP 8 spacecraft. Case studies of selected events and statistical analyses were carried out. Multi-spacecraft correlations using low altitude or geosynchronous satellite data, simultaneously sampled with magnetotail observations, attempt to separate temporal from spatial variations, and thus provide a global description of the energy-transfer process. In this respect the global imaging provided by the Dynamics Explorer 1 satellite will doubtless be a powerful tool in future studies. Currently, a workshop (CDAW 8) utilizing imaging, solar wind, and tail observations is being planned.

48691 **(AD-A—182292/3/XAB) Determination of ionospheric electron-density profiles from satellite uv (ultraviolet) emission measurements.** Decker, D.T.; Daniell, R.E.; Jasperse, J.R.; Strickland, D.J. (Air Force Geophysics Lab., Hanscom AFB, MA (USA)). 1986. 9p. (AFGL-TR—87-0187). NTIS, PC A02/MF A01.

Pub. in SPIE, Ultraviolet Technology, Vol. 687, 73-80(1986).

This paper addresses the problem of using satellite ultraviolet measurements to deduce the ionospheric electron density profile (EDP). The ionospheric processes that produce the ultraviolet emissions differ from region to region, so it is necessary to consider separate approaches for the various ionospheric subregions. The authors discuss approaches suitable for (1) the midlatitude daytime ionosphere, (2) the midlatitude nighttime ionosphere, and (3) the undisturbed auroral E layer.

Kratkie Soobshcheniya po Fizike.; (no.11).

In Plasma physics. Collection.

Experimental data on measurements a daily variation of cosmic rays (CR) in the statosphere in different period are presented. Different mechanism of formation of a strong (— 4%) observed variation are discussed. Strong daily variations of CR intensity in the stratosphere couldn't be referred to the known mechanisms of daily variations (temperature effect, CR anizotropy effect). Probably, daily variation cause is existence of hypothetic pulsations of CR intensity in the stratosphere with a period of 160 min, typical of variations of many important for CR the Sun and magnetic field characteristics. 8 refs.; 2 figs.

48693 (N—87-24247, pp vp) **Auroral particles.** Evans, D.S. Jun 1987. NTIS, PC A18/MF A01. (NASA-CP—2464; REPT—87B0055; NAS—1.55:2464; CONF-8504313—).

From Essays in space science; Greenbelt, MD, USA (23 Apr 1985).

The problems concerning the aurora posed prior to the war are now either solved in principle or were restated in a more fundamental form. The pre-war hypothesis concerning the nature of the auroral particles and their energies was fully confirmed, with the exception that helium and oxygen ions were identified as participating in the auroral particle precipitation in addition to the protons. The nature of the near-Earth energization processes affecting auroral particles was clarified. Charged particle trajectories in various electric field geometries were modeled. The physical problems have now moved from determining the nature and geometry of the electric fields, which accelerate charged particles near the Earth, to accounting for the existence of these electric fields as a natural consequence of the solar wind's interaction with Earth. Ultimately the reward in continuing the work in auroral and magnetospheric particle dynamics will be a deeper understanding of the subtleties of classical electricity and magnetism as applied to situations not blessed with well-defined and invariant geometries.

48694 **(OUP—87-12) Electrodynamics of the polar cusp ionosphere. A case study.** Sandholt, P.E.; Lybekk, B.; Egeland, A.; Bythrow, P.F.; Hardy, D.A. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1987. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87752520.

Satellite measurements of magnetic field and ion drift components above auroral structures observed from the ground permits detailed investigations of auroral electrodynamics in the cusp ionosphere. Information on Birkeland currents, Poynting flux, height-integrated Pedersen conductivity and Joule heat dissipation rate has been derived. Intermediate scale (10's of km) structures of enhanced electron precipitation with peak energy fluxes — 5 ergs/cm/sup 2/ sec (5.10/sup -3/ W/m/sup 2/) and average energy — 0.1 keV were associated with strong, red-dominated auroral forms (I 630.0 nm≅ 5 kR) with typical spectral ratio I 630.0/nm/I557.7 nm ≅ 5. Within these forms strong northward electric fields with peak values of — 200 mV/m and Birkeland current densities — 10 μA/m/sup 2/ were observed. Rather complex patterns of Birkeland currents were connected to these structures. Both downward and upward directed Poynting fluxes associated with the Birkeland currents were inferred, at different latitudes within the cusp. The downward flux is dissipated as ionospheric Joule heating. Indications of additional dissipation and/or source mechanisms associated with the Poynting flux are observed in some limited regions. From correlated latitudinal variations in electric and magnetic field components, the Joule heat dissipation rate wihtin one of the auroral forms could be estimated. The dissipation rate in the center of this structure was found to be — 5 times higher than the particle energy input rate. The satellite pass occurred within an interval (IMF B/sub z/ < 0) characterized by a series of short-lived (few minutes) poleward moving auroral structures, each appearing at the cusp equatorward boundary. 21 refs.

48695 **(PB—87-203998/XAB) TIROS-N/NOAA A-J space environment monitor subsystem. Technical memo.** Seale, R.A.; Bushnell, R.H. (National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.). Apr 1987. 117p. (NOAA-TM-ERL-SEL—75). NTIS, PC A06/MF A01.

The Space Environment Monitor (SEM), which is incorporated as a subsystem in the TIROS-N and NOAA A-J satellites, is described. The SEM consists of a Total Energy Detector (TED), a Medium Energy Proton and Electron Detector (MEPED), a High Energy Proton and Alpha Detector (HEPAD) and a Data Processing Unit (DPU). The detectors are intended to provide near-real-time particle data for use in the Space Environment Service Center of National Oceanic and Atmospheric Administration (NOAA) and to provide a long-term scientific data base. Telemeter codes, data reduction, and test instructions are given.

Pub. in Physical Review A, Vol. 35, No. 9, 3725-3740(1 May 1987).

The Fock-Tani representation is adapted to use of Jacobi coordinates useful in theory of 3-body charge transfer. This representation is applied to calculation of charge transfer cross sections for collisions involving several types of ions and 2-body bound states.

48698 **(AD-A—182302/0/XAB) Ion-dipolar molecule rate coefficients.** Morgan, W.L.; Bates, D.R. (Queen's Univ., Belfast, Northern Ireland (UK). Dept. of Applied Mathematics and Theoretical Physics). 15 Mar 1987. 6p. NTIS, PC A02/MF A01.

Pub. in Astrophysical Jnl., Vol. 314, 817-821(15 Mar 1987).

Using the semiclassical adiabatic invariance method, extensive computations are performed on the cross sections and rate coefficients for hitting collisions between ions and linear polar molecules. The results are parameterized so that the cross sections and rate coefficients for any polarizability, dipole moment, reduced mass, and temperature can easily be calculated. Some computations are also performed for collisions involving symmetrical top polar molecules in low (J, K) levels. The results show that the (1,1) rate coefficients are rather greater than are the (1,0) rate coefficients (which are as for a linear polar molecule), especially at low temperatures.

48699 **(AD-A—182457/2/XAB) Excitations during collisionally-induced electron detachment of negative ions. Final report, 1 August 1983-31 December 1986.** Menendez, M.G. (Georgia Univ., Athens (USA). Dept. of Physics). Jun 1987. 20p. NTIS, PC A02/MF A01.

This research has had its main thrust the detailed investigation of the electron-loss processes of H^- in collisions with neutral atoms (mainly He) and some measurements associated with projectile excitation in ion-atom collisions. Measurements were made on the energy spectrum of detached electrons at a laboratory scattering angle of zero in coincidence with Lyman-alpha photons from the excitation and subsequent decay of H(2p) produced during the process, H- + He becoming H(2p) + e- + He*, at 0.5-MeV incident ion energy. It was found that this electron energy distribution mimics the so-called very sharp peak feature of the doubly differential cross section previously measured under e- and H coincidence conditions. This result shows that excitation of H is responsible for the very sharp peak and that the detached electron energy distribution associated with H(2p) is significantly different from the distribution associated with the production of H(1s).

48700 **(AD-A—182638/7/XAB) Theory of half-collision cross sections.** Girardeau, M.D. (Oregon Univ., Eugene (USA)). 1986. 11p. (QFT—15). NTIS, PC A02/MF A01.

Pub. in International Jnl. of Quantum Chemistry, Vol. 29, 1483-1492(1986).

The Lippman-Schwinger quantum theory of collisions is generalized so as to become applicable to decay of metastable states, and used to derive a general formula for the decay cross section.

48701 **(ANL-PHY—87-1) Proceedings of the workshop on opportunities for atomic physics using slow, highly-charged ions.** (Argonne National Lab., IL (USA)). 1987. Contract W-31109-ENG-38. 298p. (CONF-870152—). NTIS, PC A13/MF A01; 1; GPO Dep. File Number DE87013991.

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

The study of atomic physics with highly-charged ions is an area of intense activity at the present time because of a convergence of theoretical interest and advances in experimental techniques. The purpose of the Argonne "Workshop on Opportunities for Atomic Physics Using Slow, Highly-Charged Ions" was to bring together atomic, nuclear, and accelerator physicists in order to identify what new facilities would be most useful for the atomic physics community. The program included discussion of existing once-through machines, advanced ion sources, recoil ion techniques, ion traps, and cooler rings. One of the topics of the Workshop was to discuss possible improvement to the ANL Tandem-Linac facility (ATLAS) to enhance the capability for slowing down ions after they are stripped to a high-charge state (the Accel/Decel technique). Another topic was the opportunity for atomic physics provided by the ECR ion source which is being built for the Uranium Upgrade of ATLAS. 18 analytics were prepared for the individual papers in this volume.

48702 (ANL-PHY—87-1, pp 1-15) **Status of QED [Quantum Electrodynamics] in atomic physics.** Sapirstein, J. (Univ. of Notre Dame, IN). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

This paper presents a discussion of QED. QED effects, as applied to atomic physics, are defined. The hyperfine splitting of muonium is discussed. Lamb shifts in hydrogen and large Z one-electron atoms are also explored. Many-body effects that can be investigated in two and three or more electron systems are discussed. (JDH)

48703 (ANL-PHY—87-1, pp 17-36) **Accurate x-ray spectroscopy.** Deslattes, R.D. (National Bureau of Standards, Gaithersburg, MD). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

Heavy ion accelerators are the most flexible and readily accessible sources of highly charged ions. These having only one or two remaining electrons have spectra whose accurate measurement is of considerable theoretical significance. Certain features of ion production by accelerators tend to limit the accuracy which can be realized in measurement of these spectra. This report aims to provide background about spectroscopic limitations and discuss how accelerator operations may be selected to permit attaining intrinsically limited data.

48704 (ANL-PHY—87-1, pp 37-47) **Spectroscopy of highly ionized atoms.** Livingston, A.E. (Notre Dame Univ., IN). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

The atomic structure and decay characteristics of excited states in multiply ionized atoms represent a fertile testing ground for atomic calculations ranging from accurate ab initio theory for few-electron systems to practical semi-empirical approaches for many-electron species. Excitation of fast ions by thin foils generally produces the highest ionization stages for heavy ions in laboratory sources. The associated characteristics of spectroscopic purity and high time resolution provide unique capabilities for studying the atomic properties of highly-ionized atoms. This report is limited to a brief discussion of three classes of atomic systems that are experiencing current theoretical and experimental interest: precision structure of helium-like ions, fine structure of doubly-excited states, and lifetimes of metastable states. Specific measurements in each of these types of systems are mentioned, with emphasis on the relation to studies involving slow, highly-charged ions.

48705 (ANL-PHY—87-1, pp 49-73) **Experiments with recoil ions and other considerations.** Cocke, C.L. (Kansas State Univ., Manhattan). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

Some opportunities in collisions physics with slow, multiply charged ions are addressed. A distinction between inner and outer shell collisions is drawn. The applicability of recoil ion sources to outer shell collision systems is discussed, with emphasis on the quality of the beam desired. An example of an inner shell collision is discussed, and the usefulness of not pushing the collision energy too low is pointed out.

48706 (ANL-PHY—87-1, pp 75-88) **Collective behavior of multiply-excited states of atoms.** Lin, C.D. (Argonne National Lab., IL; Kansas State Univ., Manhattan). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

This paper is a synopsis of a talk presented during the workshop. The first part of the talk emphasizes that doubly-excited states and multiply-excited states are produced easily in multiply-charged ion-atom collisions. Data show that the peaks for single

capture can be separated in the energy gain spectroscopy. By using the coincidence technique, it is possible to show that multiple capture up to four electrons in a single collision can occur. The energy gain spectra for capture of one (k = 1), two (k = 2), three and four electrons are shown. The energy resolution of these energy-gain spectra is not adequate for resolving the different doubly- or multiply-excited states. The zero-degree spectroscopy advanced recently can achieve energy resolution of a fraction of one electron volt. These are now opportunities to study doubly-excited states systematically.

48707 (ANL-PHY—87-1, pp 101-124) **Multi-charged ion measurements in ion traps.** Church, D.A. (Texas A and M Univ., College Station). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

The production and confinement of multi-charged ions in ion traps at electronvolt energies are described, as well as recent experiments in which ions are externally injected into Penning traps. Possibilities for cooling externally-injected ions are discussed. Electron transfer measurements using confined multi-charged ions are reviewed. 58 refs., 10 figs.

48708 (ANL-PHY—87-1, pp 125-133) **High charge state, ion-atom collision experiments using accel-decel.** Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Graham, W.G. (Western Michigan Univ., Kalamazoo; Univ. of Ulster, Coleraine, Northern Ireland, United Kingdom). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

Recent studies of $_{16}S^{13+}$ + He collisions between 2.5 and 200 MeV, which were made using the accel-decel technique with the Brookhaven National Laboratory coupled MP tandem Van de Graaff accelerators, are discussed. Cross sections were measured for single electron-capture and -loss as well as K x rays correlated to electron-capture. Other planned ion-atom collision experiments requiring accel-decel are also presented.

48709 (ANL-PHY—87-1, pp 135-148) **Optical spectroscopy of slow, highly ionized atoms.** Lembo, L.J.; Danzmann, K.; Meyerhof, W.E.; Hansch, T.W. (Stanford Univ., CA). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

We have begun a research program, finally aiming at high-resolution laser spectroscopy of slow, highly-charged ions. The first phase of the program was devoted to the development of the Stanford Recoil Ion Source to produce the HQLE ions. During the second stage we have been studying the population of Rydberg levels by electron capture processes using wavelength spectra and polarization measurements. Emission spectra in the visible and near ultraviolet have been observed for transitions between Rydberg states of highly charged neon ions (Ne/sup q^+/ with q = 10 to 5), following electron capture from Na. Structure appears in those spectra for which the incoming ions carry L-shell core electrons. The optical emission cross sections are much smaller for these ions, and the radiation is significantly depolarized relative to ions whose transitions are seen as structureless. These effects are attributed to the inhibition of Stark mixing by core interactions.

48710 (ANL-PHY—87-1, pp 149-161) **Atomic physics at the LBL ECR [Electron Cyclotron Resonance] ion source.** Prior, M.H. (Lawrence Berkeley Lab., CA). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—). Contract AC03-76SF00098.

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

Atomic physics research with low energy, highly charged ions has been carried out at LBL using slow recoil ions produced by fast heavy ion impact on gas targets. This work has included electron capture collision studies and spectroscopy of two-electron ions, at the SuperHILAC and determination of recoil production cross-sections using U ion beams at the Bevalac. The author has participated in some of this work and outgrowths of all these efforts are continuing. Recently a program was begun to take advantage of the multiply charged ion beams available from the LBL Electron Cyclotron Resonance (ECR) ion source for atomic physics research. The charge states available from a modern ECR source are approximately similar to those from the recoil technique, but the currents available are generally higher and the range of elements is not restricted to those found in gases. Practically speaking, although an ECR is not without its degree of complexity and cost, these are substantially below those of a heavy ion accelerator complex. For the very lowest energies, i.e., a few eV, the recoil technique will remain attractive, and details of the recoil ion production process are interesting topics of study.

48711 (ANL-PHY—87-1, pp 183-195) **Science with multiply-charged ions at Brookhaven National Laboratory.** Jones, K.W.; Johnson, B.M.; Meron, M.; Thieberger, P. (Brookhaven National Lab., Upton, NY). 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—). Contract AC02-76CH00016.

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

The production of multiply-charged heavy ions at Brookhaven National Laboratory and their use in different types of experiments are discussed. The main facilities that are used are the Double MP Tandem Van de Graaff and the National Synchrotron Light Source. The capabilities of a versatile Atomic Physics Facility based on a combination of the two facilities and a possible new heavy-ion storage ring are summarized. It is emphasized that the production of heavy ions and the relevant science necessitates very flexible and diverse apparatus.

48712 (ANL-PHY—87-1, pp 291-299) **Atomic physics at ATLAS [Argonne Tandem-Linac Accelerator System].** Dunford, R.W. 1987. NTIS, PC A13/MF A01. File Number DE87013991. (CONF-870152—).

From Workshop on opportunities for atomic physics using slow, highly-charged ions; Argonne, IL, USA (12 Jan 1987).

This report lists the atomic physics experiments that are currently in progress at Argonne Tandem-Linear Accelerator System (ATLAS); future experiments that are being planned for the facility are described. Finally, the program of atomic physics experiments being planned for the ECR ion source is described.

48713 **(CONF-8706176—3) Cold highly ionized ions: Comparison of energies of recoil ions produced by heavy ions and by synchrotron radiation x rays.** Sellin, I.A.; Levin, J.C.; O, C.S.; Cederquist, H.; Elston, S.B.; Short, R.T.; Schmidt-Boecking, H. (Tennessee Univ., Knoxville (USA). Dept. of Physics; Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 22p. NTIS, PC A02. File Number DE87014792.

From Workshop and symposium on the physics of low energy, stored, and trapped particles; Stockholm, Sweden (14 Jun 1987).

The energies of highly excited, high-charge-state recoil ions produced by fast heavy-ion impact on target atoms ("hammer" method) have been compared with the energies of similar-charge-state recoil ions produced by vacancy cascades subsequent to inner-shell photoabsorption of tuned synchrotron radiation x rays ("scalpel" method). These comparisons show that the "hammer" method leads to recoil ion temperatures typically 4 orders of magnitude lower than those which occur in plasma sources in which ions of similar ionization and excitation states have comparable abundance, while the "scalpel" method leads to temperatures up to 6 orders of magnitude lower. Advantages and drawbacks of each method for potential precision spectroscopy of stored or trapped high charge state ions, and for production of extracted beams of low emittance for use in secondary ion-atom collision studies at eV to keV energies are discussed. 20 refs.

48714 **(DOE/ER/53217—1) [Theoretical atomic physics for fusion]: 1986 annual [progress] report.** (Auburn Univ., AL (USA)). 1986. Contract FG05-86ER53217. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014579.

This report lists experiments completed at Auburn University in 1986 in theoretical/experimental atomic physics. The projects

include the following topics: (1) electron-impact ionization of iron; (2) electron-impact ionization cross sections of calcium; (3) dielectronic recombination of beryllium-like atomic ions; (4) dielectronic recombination of iron ions; and (5) electron-impact ionization of Xe^{9+}. (JDH)

48715 (DOE/ER/60420—1, pp 547-554) **Electron impact cross sections and spatial aspects of electron energy degradation in water vapor.** Dayashankar; Suh, S.T.; Green, A.E.S. (Univ. of Florida, Gainesville). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Using a comprehensive set of electron cross sections, they have carried out a Monte Carlo study of the spatial and energetic aspects of electron degradation in the energy range from 30 eV to 1 MeV. The results are given in terms of a four-dimensional spatial yield spectral distribution. This is represented by a simple approximate analytic form which is convenient to use for calculating the spatial distribution of the initial species created due to electron energy degradation. They also investigate the sensitivity of these electron transport results to some of the input cross sections. They have specifically examined the influence of the assumed form of cross sections for vibrational states on the gross yields. They conclude that in transport calculations it is important to use approximate forms with reasonable asymptotic limits. Finally, they call attention to molecular processes which are important in microdosimetry but whose cross sections are particularly uncertain.

48716 (DOE/ER/60420—1, pp 627-633) **X-ray incoherent scattering factor for molecular nitrogen as determined by high energy electron scattering.** Ketkar, S.N.; Bonham, R.A. (Indiana Univ., Bloomington). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

A beam of high energy electrons, 25 keV, was scattered off an effusive gas jet of molecular nitrogen, and the energy loss spectrum from 0 to 800 eV was measured for scattering angles ranging from 0.3° to 2.0°. The energy loss spectra were converted to relative generalized oscillator strength (GOS) distributions and Bethe sum rule normalized to an absolute intensity scale. The x-ray incoherent scattering factor, S(K), as a function of momentum transfer, K, was determined by the use of the S(-1,K) GOS sum rule and compared with the predictions of theory. The effect of electron correlation on S(K) was determined by comparison of the experiment with molecular near Hartree-Fock calculations. Results from an extensive CI calculation were found to be in agreement with their experimental results, but proposed scaling of the CI theory appears to be incorrect.

48717 (DOE/ER/60514—1) **Direct infrared absorption of clusters in pulsed molecular beams: First progress report, May 1, 1986 to July 31, 1987.** Muenter, J.S. (Rochester Univ., NY (USA). Dept. of Chemistry). 1987. Contract FG02-87ER60514. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014802.

This report describes accomplishments over the past year in research supported by this grant, and also outlines plans for the next year. The principal goal for future work is the continued development of a new molecular beam infrared absorption spectrometer, and the application of this instrument to the study of cluster molecules of atmospheric importance. Current results presented here document the present capabilities of this program. This report also describes the completion of previous work on excited vibrational states of stable molecules. Several reprints of journal articles are enclosed.

48718 (IAE—4269/1) **On possibility of the μHe/sup +/(2s1/2)He/sub 4/ and μHe/sup +/(2s1/2)He/sub 6/ symmetrical complex production in helium atmosphere.** Grechukhin, D.P.; Romanov, S.V.; Soldatov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1986. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702894.

A hypothesis of the μHe/sup +/(2S 1/2)He/sub n/ symmetrical complex production in pure helium atmosphere is discussed in connection with studying the possibility setting-up an experiments on observation of P-odd effects in the 2s1/2 -> 1s1/2 muon γ-transition caused by a neutral weak interaction of a muon and a nucleus. Within the framework of a relativistic version of the Xα-scattered wave method the conversion rate of 2s1/2 -> 1s1/2 muon transition on the electron shell of the complexes are estimated for n=4 (tetrahedron) and n=6 (octahedron). It is shown that the rate of such process exceeds the value of total rate of the μHe/sup +/(2s1/2) decay in pure helium atmosphere at 7-50 atm pressure that is specified by the experimenters several tens of times, but it agrees with the results of independent measurements carried out at 6 atm pressure. 33 refs.; 5 tabs.

48719 (INIS-SU—415, pp 18-24) **Hadronic atom in the Lee model.** Belyaev, V.B.; Solovtsova, O.P. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780178. (N—18-86).

In JINR rapid communications. Collection.

The hadronic atom model is considered. The strong interaction of light particle with "nuclei" is described by the Lee model. The applicability of Deser's formula for the energy shift in such an atom is discussed. It is shown that for some mass ranges of the particles involved the Deser formula is violated. 7 refs.; 2 figs.

48720 (LBL—23710) **Systematic studies of molecular vibrational anharmonicity and vibration-rotation interaction by self-consistent-field higher derivative methods: Applications to asymmetric and symmetric top and linear polyatomic molecules.** Clabo, D.A. Jr. (Lawrence Berkeley Lab., CA (USA)). Apr 1987. Contract AC03-76SF00098. 195p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE87014691.

Inclusion of the anharmonicity normal mode vibrations [i.e., the third and fourth (and higher) derivatives of a molecular Born-Oppenheimer potential energy surface] is necessary in order to theoretically reproduce experimental fundamental vibrational frequencies of a molecule. Although ab initio determinations of harmonic vibrational frequencies may give errors of only a few percent by the inclusion of electron correlation within a large basis set for small molecules, in general, molecular fundamental vibrational frequencies are more often available from high resolution vibration-rotation spectra. Recently developed analytic third derivatives methods for self-consistent-field (SCF) wavefunctions have made it possible to examine with previously unavailable accuracy and computational efficiency the anharmonic force fields of small molecules.

48721 (PPPL—2464) **Nonperturbative analysis of the two-level atom: Applications to multiphoton excitation.** Duvall, R.E.; Valeo, E.J.; Oberman, C.R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Aug 1987. Contract AC02-76CH03073. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000113.

Selective excitation in an atomic system subjected to a slowly varying external electromagnetic field is studied using a two-level model. Time evolution of the system is found using an approach which is nonperturbative in the field strength. There is no constraint to small values of the applied field, that is, the field (in appropriate energy units) need not be small compared to the difference in energies of the two levels. Rather, we prey upon the fact that the situation of interest to us is where the frequency of the exciting field is small compared to the frequency associated with the level difference. Transition probabilities and resonance conditions are found which circumscribe both the large and small field limits. In the weak field limit the previous results of high-order perturbation theory are readily recovered. For a monochromatic field the characteristic features of resonance excitation at high harmonic

number of the applied field are (a) extremely narrow resonance widths and (b) shifts in resonance positions which are strong functions of field intensity. Because of this sensitivity, we are able to demonstrate that when slow temporal evolution of the field amplitude is taken into account (e.g., due to finite pulse duration) the appropriate mean excitation rate is that due to the uncorrelated contribution of many resonances. The results of this analysis are used to estimate excitation rates in a specific atomic system, Cd^{12+}, which are then compared to multiphoton ionization rates. Our calculations suggest that the ionization rate exceeds the excitation rate by several orders of magnitude. 15 refs., 3 figs.

48722 **(UCID—21114) Time-dependent field equations for paraxial relativistic electron beams: Beam Research Program.** Sharp, W.M.; Yu, S.S.; Lee, E.P. (Lawrence Livermore National Lab., CA (USA)). 20 Jul 1987. Contract W-7405-ENG-48. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000240.

A simplified set of field equations for a paraxial relativistic electron beam is presented. These equations for the beam electrostatic potential phi and pinch potential Phi identical to A/sub z/ - phi retain previously neglected time-dependent terms and for axisymmetric beams reduce exactly to Maxwell's equations.

48723 **Matching beams from relativistic electron guns into solenoidal transport systems.** Miller, R.B.; Poukey, J.W.; Shope, S.L.; Mazarakis, M.G. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Applied Physics;* **62**: No. 9, 3535-3538(1 Nov 1987).

In this paper we develop a new approach for controlling the electron trajectories in a relativistic electron beam diode which is based on appropriately contouring an externally generated, axial magnetic field. The technique provides a convenient method of matching a beam produced by a shielded source injector into a uniform solenoidal transport system of a linear induction accelerator. To illustrate the method, we analyze a simple diode geometry and compare the analytical results with trajectory code calculations.

48724 **Measurement and modeling of nitrogen resonance line profiles from an electrodeless discharge lamp.** Wood, D.R.; Skinner, G.B.; Lifshitz, A. (Departments of Physics and Chemistry, Wright State University, Dayton, Ohio 45435). *Journal of Chemical Physics;* **87**: No. 9, 5092-5096(1 Nov 1987).

Experimental profiles of the 1200 A resonance triplet of atomic nitrogen were measured for a variety of operating conditions of an end-on electrodeless lamp, and corresponding absorption curves were calculated. Each source profile was determined by fitting parameters to an empirical two-layer model, then convoluting with the instrumental function for comparison with experimental data. Each three-component profile was fitted with three adjustable parameters: an absorption parameter for each of the two layers and a third absorption parameter to adjust for radiation trapping. Curves of absorption as a function of atom concentration, calculated from these profiles, are very similar to the shock tube calibrations of Thielen and Roth in which a source of similar design has been used.

48725 **Multiphoton ionization studies of benzene in tetramethylsilane and n-pentane solutions.** Faidas, H.; Siomos, K. (Atomic, Molecular, and High Voltage Physics Group, Health and Safety Research Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831-6123). *Journal of Chemical Physics;* **87**: No. 9, 5097-5104(1 Nov 1987). Contract AC05-84OR21400.

The multiphoton ionization spectra of dilute solutions (approx. $<10^{-3}$ M) of benzene in tetramethylsilane (TMSi) and n-pentane (n-Pt) have been measured using linearly polarized light over the laser excitation wavelength (λ/sub exc/) region from 360 to 560 nm. Spectra measured with circularly polarized light are also reported for 460 <λ/sub exc/<540 nm. The order of the multiphoton ionization mechanisms that occur in different λ/sub exc/ regions has been determined, and their importance is discussed together with the observed polarization behavior. The polarization ratio and the "apparent" order of the ionization process were found to depend on the laser intensity. The ionization threshold of benzene in TMSi was estimated to lie between 6.6 and 5.9 eV, while in n-Pt between 7.36 and 6.8 eV.

48726 **Resonance structure in the vibrationally resolved photoelectron branching ratios and angular distributions of the $2\pi p1$ channel of NO.** Southworth, S.H.; Parr, A.C.; Hardis, J.E.; Dehmer, J.L. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **87**: No. 9, 5125-5130(1 Nov 1987). Contract W-31-109-ENG-38.

We report on vibrationally resolved measurements of photoelectron angular distributions and branching ratios for $NO^+(2\pi^{-1})X\ ^1\Sigma^+$ using synchrotron radiation over $h\nu = 11.5$—26 eV. Normally weak vibrational levels are strongly enhanced below 18 eV, and the photoelectron asymmetry parameters and branching ratios display a vibrationally dependent, broad spectral structure over $h\nu \simeq 11$—18 eV. These observations may reflect the presence of the expected σ shape resonance, however, various interchannel coupling mechanisms may also be involved. Resonance structure in the photoelectron asymmetry parameters is also observed in the $h\nu \simeq 19$—22 eV region. This structure is likely associated with Rydberg excitations from the 4σ orbital.

48727 **Direct measurement of rotational energy transfer rate constants for $H^{35}Cl$ (v = 1).** Rohlfing, E.A.; Chandler, D.W.; Parker, D.H. (Combustion Research Facility, Sandia National Laboratories, Livermore, California 94550). *Journal of Chemical Physics;* **87**: No. 9, 5229-5237(1 Nov 1987).

We investigate the rotational energy transfer of $H^{35}Cl$ (v = 1) in collisions with thermal HCl at 298 K. Rotationally state-selective excitation of v = 1 over J = 1—6 is achieved by stimulated Raman pumping, and the rotational relaxation from the initially pumped level is monitored via 2+1 resonantly enhanced multiphoton ionization (REMPI) through the $E\ ^1\Sigma^+$—$X\ ^1\Sigma^+0$—1 band. The ions are detected in a time-of-flight mass spectrometer in order to ensure that only relaxation of $H^{35}Cl$ is observed. We present empirical correction factors for determining relative rotational populations from the REMPI spectral line intensities and extract the rate constants for rotational energy transfer from the time-dependent populations using numerical techniques. The excellent sensitivity of the REMPI technique makes it possible to monitor the relaxation on very short collisional time scales (<0.1 hard sphere collision) and thereby enables us to determine the rate constants for both single quantum and multiquanta rotational transitions directly, without the use of a simplifying model for the matrix of rate constants. The measured rate constants illustrate the importance of multiquanta transitions for HCl; such transitions account for —30% of the total population loss from a given rotational level. We compare our rate constants to those obtained in previous measurements on HCl (v = 1) and HF (v = 2). We find that the rate constants are not adequately described by models based solely on the rotational energy defect of the vibrationally excited molecule.

48728 **Observation of Autler-Townes splitting in the multiphoton ionization of H_2: Measurement of vibronic transition moments between excited electronic states.** Quesada, M.A.; Lau, A.M.F.; Parker, D.H.; Chandler, D.W. (Department of Chemistry, University of California, Santa Cruz, California 95064). *Physical Review [Section] A: General Physics;* **36**: No. 8, 4107-4110(15 Oct 1987).

We report the first observation of Autler-Townes splitting in multiphoton ionization of molecules and its application to measure vibronic transition moments between excited electronic states. The effect was observed in the two-color four-photon ionization of H_2 via the resonant levels $E,F\ ^1\Sigma/sub\ g/^+$, v = 6, J = 1 and $D\ ^1Pi/sub\ u/$, v = 2, J = 2. Calculations give good fits to the observed spectra. They yield a vibronic transition moment of 2.0 +- 0.5 a.u. between the above excited states, in agreement with the ab initio value 1.97 a.u. calculated by Huo and Jaffe.

48729 **Evaluation of cross section for electron capture by positrons.** Deb, N.C.; McGuire, J.H.; Sil, N.C. (Department of Physics, Kansas State University, Manhattan, Kansas 66506). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3707-3714(15 Oct 1987).

We present an improved method for the calculation of positronium-formation cross section from one-electron atomic targets of arbitrary charge Z/sub T/. The calculation is complete through second order in the collisional potentials. We use this technique to calculate the positronium-formation cross sections for 1s-1s electron capture from atomic hydrogen.

48730 **Distorted-wave calculations of the electron-impact ionization of highly ionized Na-like ions.** Griffin, D.C.; Pindzola, M.S.; Bottcher, C. (Joint Institute for Laboratory Astrophysics, University of Colorado National Bureau of Standards, Boulder, Colorado 80309). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3642-3653(15 Oct 1987).

We report on distorted-wave calculations of the electron-impact ionization cross sections and rate coefficients for the Na-like ions Ti/sup 11+/, Cr/sup 13+/, Fe/sup 15+/, and Ni/sup 17+/. The cross sections for direct ionization out of the 3s, 2p, and 2s subshells were determined using the configuration-average, distorted-wave approximation. In addition, excitation-autoionization contributions originating from inner-shell excitations of the type $2s^22p^63s \rightarrow 2s^22p^53snl$ (n = 3,4,5) and $2s^22p^63s \rightarrow 2s2p^63snl$ (n = 3,4) were calculated by employing the distorted-wave approximation and configuration-interaction, bound-state wave functions. Near threshold, the total-ionization cross sections in all four ions are enhanced by approximately a factor of 5 through excitation autoionization. These excitation-autoionization contributions are large, even though they have been substantially reduced by radiative decay to the bound states of the initial ion. Furthermore, although electron correlation has a minimal effect on the excitation cross sections, the magnitude of the branching ratios for autoionization is quite sensitive to configuration interaction in the autoionizing levels. This is especially true for the 2p→3d excitations, where configuration interaction between $2p^53s3d$ and $2p^53p^2$ can increase the magnitude of the autoionizing rates for levels within the $2p^63s3d$ configuration by as much as three orders of magnitude. Thus, for example, in the case of the 2p→3d excitation in Ni/sup 17+/, correlation increases the overall branching ratio for autoionization from 0.27 to 0.53.

48731 **L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions.** Andrews, M.C.; McDaniel, F.D.; Duggan, J.L.; Miller, P.D.; Pepmiller, P.L.; Krause, H.F.; Rosseel, T.M.; Rayburn, L.A.; Mehta, R.; Lapicki, G.; and others. (Department of Physics, North Texas State University, Denton, Texas 76203). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3699-3706(15 Oct 1987).

L- and M-shell x-ray production cross sections have been measured for thin solid targets of neodymium, gadolinium, holmium, ytterbium, gold, and lead by 25-MeV /sub //sub <1/ $_6{}^{12}$C/sup q/$^+$ (q = 4,5,6) and by 32-MeV /sub //sub <1/ $_8{}^{16}$O/sup q/$^+$ (q = 5,7,8). The cross sections were determined from measurements made with thin targets (less than 2.25 $\mu g/cm^2$). For projectiles with one or two K-shell vacancies, the target x-ray production cross sections were found to be enhanced over those for projectiles without a K-shell vacancy. The sum of direct ionization to the continuum (DI) plus electron capture (EC) to the L,M,N,. . . shells and EC to the K shell of the projectile have been extracted from the data. The results are compared to the predictions of first Born theories, i.e., plane-wave Born approximation for DI and Oppenheimer-Brinkman-Kramers formula of Nikolaev for EC, and to the ECPSSR that accounts for energy loss and Coulomb deflection of the projectile as well as for relativistic and perturbed stationary states of inner-shell electrons.

48732 **Interference between direct and rearrangement mechanisms for double ionization.** McGuire, J.H.; Burgdoerfer, J. (Department of Physics, Kansas State University, Manhattan, Kansas 66506). *Physical Review [Section] A: General Physics;* **36**: No. 8, 4089-4090(15 Oct 1987).

In double ionization at very high collision velocities Becker has pointed out that so-called direct mechanism obeys the dipole selection rule while the rearrangement mechanism is a monopole transition, and since s and p waves cannot interfere in total cross sections, interference between these mechanisms is forbidden. It is shown here that interference is possible due to dipole-forbidden contributions to the direct mechanism or rearrangement process.

48733 **Soft x-ray absorption cross section of argon determined by a variable absorber technique.** Jang, B.X.; Kirz, J. (State University of New York at Stony Brook, Physics Department, Stony Brook, New York 11794). *Applied Optics;* **26**: No. 18, 3823-3826(15 Sep 1987).

The x-ray absorption cross section of argon was measured in the 1.3—3.8-nm wavelength region. To correct for the presence of higher orders in the monochromator output, a variable pressure technqiue is used. The results are in good agreement with semiempirical calculations and earlier measurements.

Kratkie Soobshcheniya po Fizike.; (no.9).

In Experimental and theoretical physics. Collection.

Behaviour of dynamic spin susceptibility of superfluid /sup 3/He-A was investigated in case when the distribution function of Fermi one-particle excitations (helium atoms) is deviated from thermodynamic equilibrium. It is shown that with growth of nonequilibrium degree in the system of one-particle excitations the paramagnon attenuation decreases and changes the sign at some critical value of nonequilibrium - "paramagnon" instability of superfluid Fermi-liquid takes place. 10 refs.

48736 **(LA-UR—87-2613) The evolution of HOBO.** Clark, R.A. (Los Alamos National Lab., NM (USA)). Apr 1987. Contract W-7405-ENG-36. 7p. (CONF-8704168—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014742.

From Workshop on particle methods in fluid dynamics and plasma physics; Los Alamos, NM, USA (13 Apr 1987).

HOBO is a free-Lagrangian hydrodynamics code which has been under development at Los Alamos for several years. It was based on free-Lagrangian tracer points and finite difference approximations to the equations of motion for fluid flow. This method will be reviewed briefly here. The use of an independent time step at each point is also described. This technique increases the speed of the code by factors of 10 to 20. How the code has been modified to achieve energy and momentum conservation and how this effects the independent time step is also included, as well as the explicit tracking of material interfaces.

From 18. conference on low temperature physics; Kyoto, Japan (20 Aug 1987).

The ^{3}He A → B transition is remarkable for a number of reasons. Because of the small bulk free energy difference between the two phases, the probability of homogeneous thermal nucleation of the B phase is vanishingly small. Thus the experimental fact that

the B phase nucleates readily from the A phase is not understood. The A → B transition is also remarkable in that when it occurs after cooling from above the critical temperature, it occurs in an extreme state of supercooling known as hypercooling. In this situation, the velocity of propagation of the A-B phase interface is controlled by microscopic phenomena rather than by thermal diffusion. We briefly review our recent work on both these topics, including the velocity of propagation of the A-B interface through hypercooled ^{3}He-A, a search for cosmic-ray-induced B-phase nucleation, and preliminary observations of B-phase nucleation locations and temperatures. 15 refs.

From IUTAM symposium on vortex motion; Tokyo, Japan (28 Sep 1987).

The concept of point vortex motion, a classical model in the theory of two-dimensional, incompressible fluid mechanics, was introduced by Helmholtz in 1858. Exploration of the solutions to these equations has made fitful progress since that time as the point vortex model has been brought to bear on various physical situations: atomic structure, large-scale weather patterns, "vortex street" wakes, vortex lattices in superfluids and superconductors, etc. The point vortex equations also provide an interesting example of transition to chaotic behavior. We give a brief historical introduction to these topics and develop two of them in particular to the point of current understanding: steadily moving configurations of point vortices; and collision dynamics of vortex pairs. 26 refs.

48739 **(LA-UR—87-2897) FLIP [fluid-implicit-particle]: A low-dissipation, particle-in-cell method for fluid flow.** Brackbill, J.U.; Kothe, D.B.; Ruppel, H.M. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 24p. (CONF-8704168—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014745.

From Workshop on particle methods in fluid dynamics and plasma physics; Los Alamos, NM, USA (13 Apr 1987).

Since convective transport is the largest source of computational diffusion, FLIP (fluid-implicit-particle) eliminates convection, and uses instead a Lagrangian formulation. In FLIP, as in PIC, particles represent the fluid: a grid is used only to calculate interactions among particles. FLIP is an adaptation to fluid flows of the implicit moment method for plasma simulation. The particles carry coordinates, momentum, mass and energy; everything necessary to describe the fluid. Using the particle data, Lagrangian moment equations solved on a grid advance the particle variables from time step to time step. An adaptive grid and implicit time differencing extend the method to singular and low-speed flows. Aspects of FLIP's properties are illustrated by calculations of the Rayleigh-Taylor instability, an unstable, subsonic stream, and a supersonic jet. The results demonstrate FLIP's applicability to the many problems where low dissipation is crucial to correct modeling. 21 refs.

48740 **Nearly monodisperse fluids. I. Monte Carlo simulations of Lennard-Jones particles in a semigrand ensemble.** Kofke, D.A.; Glandt, E.D. (Department of Chemical Engineering, University of Pennsylvania, Philadelphia, Pennsylvania 19104-6393). *Journal of Chemical Physics;* **87**: No. 8, 4881-4890(15 Oct 1987).

A hybrid, semigrand ensemble is applied to the simulation of mixtures of very many components. The independent variables are temperature, density, and the distribution of activity ratios. The system samples different compositions, with particles changing species identities during the simulation. Thus, the method is particularly well suited for applications to polydisperse mixtures. Results are presented for the simulation of mixtures of Lennard-Jones particles continuously varying in size and energy parameters. Four system sizes are used: 108, 216, 343, and 512 particles. The effect of degree of polydispersity is investigated by varying the width of the imposed distribution of activity ratios, which is Gaussian. It is found that very large systems are needed to describe wide distributions, due to the presence of ever-larger particles. A limit on sizes eventually arises from the competition of energetic and entropic effects. Methods for determining phase equilibrium for these mixtures are also discussed.

48741 **Superfluid plasmas: Multivelocity nonlinear hydrodynamics of superfluid solutions with charged condensates coupled electromagnetically.** Holm, D.D.; Kupershmidt, B.A. (Theoretical Division and Center for Nonlinear Studies, Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3947-3956(15 Oct 1987).

Four levels of nonlinear hydrodynamic description are presented for a nondissipative multicondensate solution of superfluids with vorticity. First, the multivelocity superfluid (MVSF) theory is extended to the case of a multivelocity superfluid plasma (MVSP), in which some of the superfluid condensates (protons, say) are charged and coupled electromagnetically to an additional, normal, charged fluid (electrons). The resulting drag-current density is derived due to the electromagnetic coupling of the condensates with the normal fluids. For the case of one charged condensate, the MVSP equations simplify to what we call superfluid Hall magnetohydrodynamics (SHMHD) in the approximation that displacement current and electron inertia are negligible, and local charge neutrality is imposed. The contribution of the charged condensate to the Hall drift force is determined. In turn, neglecting the Hall effect in SHMHD gives the equations of superfluid magnetohydrodynamics (SMHD). Each set of equations (MVSF, MVSP, SHMHD, and SMHD) is shown to be Hamiltonian and to possess a Poisson bracket associated with the dual space of a corresponding semidirect-product Lie algebra with a generalized two-cocycle defined on it. Topological conservation laws (helicities) associated with the kernels of these Lie algebras are also discussed as well as those associated physically with generalized Kelvin theorems for conservation of superfluid circulation around closed loops moving with the normal fluid.

48742 **Ground-state phases of polarized deuterium species.** Panoff, R.M.; Clark, J.W. (Department of Physics, Kansas State University, Manhattan, Kansas 66506). *Physical Review [Section] B: Condensed Matter;* **36**: No. 10, 5527-5539(1 Oct 1987).

Microscopic prediction of the ground-state phase of electron-spin-aligned bulk atomic deuterium (Darrow-down) is attempted, based on the variational Monte Carlo method. The accurate pair potential of Kolos and Wolniewicz is assumed, and three versions of Darrow-down are considered, which, respectively, involve one, two, and three equally occupied nuclear spin states. The most definitive results on the zero-temperature equations of state of these systems are obtained with optimized ground-state trial wave functions incorporating Jastrow pair correlations, triplet correlations, and momentum-dependent backflow effects. The species Darrow-down$_3$ is bound already at the pure Jastrow level, while the energy expectation value of Darrow-down$_2$ dips below zero upon supplementing the Jastrow description by triplets and momentum-dependent backflow. The variational energy of Darrow-down$_1$ remains positive under all current refinements of the ground-state trial function. We conclude that the systems Darrow-down$_3$ and Darrow-down$_2$, if they could be manufactured and stabilized at relevant densities, would be Fermi liquids at sufficiently low temperature; on the other hand, it is likely that Darrow-down$_1$ would remain gaseous down to absolute zero.

48743 **Structural relaxation in dense hard-sphere fluids.** Ladd, A.J.C.; Edward Alley, W.; Alder, B.J. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Statistical Physics;* **48**: No. 3, 1147-1156(Sep 1987). Contract W-7405-ENG-48.

The long-time decay of the shear-stress autocorrelation function is shown to be quantitatively related to the decay of correlations between the orientation of "bonds" connecting colliding pairs of particles. Within computational uncertainties, we find that orientational correlations in high-density fluids decay as a "stretched" exponential in time, with an exponent that is independent of densi-

ty. However, at low densities the decay is exponential. In two-dimensional systems the decay is exponential, even at high density.

48744 Rigorous upper bounds for transport due to passive advection by inhomogeneous turbulence. Krommes, J.A.; Smith, R.A. (Princeton University, Plasma Physics Laboratory, P.O. Box 451, Princeton, New Jersey 08544-0451). *Annals of Physics (New York);* 177: No. 2, 246-329(1 Aug 1987).

A variational procedure, due originally to Howard and explored by Busse and others for self-consistent turbulence problems, is employed to determine rigorous upper bounds for the advection of a passive scalar through an inhomogeneous turbulent slab with arbitrary generalized Reynolds number R and Kubo number K. In the basic version of the method, the steady-state energy balance is used as a constraint; the resulting bound, though rigorous, is independent of K. A pedagogical reference model (one dimension, K = ∞) is described in detail; the bound compares favorably with the exact solution. The direct-interaction approximation is also worked out for this model; it is somewhat more accurate than the bound, but requires considerably more labor to solve. For the basic bound, a general formalism is presented for several dimensions, finite correlation length, and reasonably general boundary conditions. Part of the general method, in which a Green's function technique is employed, applies to self-consistent as well as to passive problems and thereby generalizes previous results in the fluid literature. The formalism is extended for the first time to include time-dependent constraints, and a bound is deduced which explicitly depends on K and has the correct physical scalings in all regimes of R and K. Two applications from the theory of turbulent plasmas are described: flux in velocity space, and test particle transport in stochastic magnetic fields. For the velocity space problem, the simplest bound reproduces Dupree's original scaling for the strong turbulence diffusion coefficient.

48745 Influence of a heated leading edge on boundary layer growth, stability, and transition. Landrum, D.B.; Macha, J.M. (Sandia National Labs., Albuquerque, NM). *AIAA (American Institute of Aeronautics and Astronautics) Journal;* 12(Jun 1987). (AIAA-Paper—87-1259; CONF-870622—).

From 19. fluid dynamics, plasma dynamics, and laser conference; Honolulu, HI, USA (8 Jun 1987).

This paper presents the results of a combined theoretical and experimental study of the influence of a heated leading edge on the growth, stability, and transition of a two-dimensional boundary layer. The findings are directly applicable to aircraft wings and nacelles that use surface heating for anti-icing protection. The potential effects of the non-adiabatic condition are particularly important for laminar-flow sections where even small perturbations can result in significantly degraded aerodynamic performance. The results of the study give new insight to the fundamental coupling between streamwise pressure gradient and surface heat flux in laminar and transitional boundary layers. 13 references.

From International Europhysics conference on high energy physics; Uppsala, Sweden (25 Jun 1987).

The statistics for the OZI forbidden reaction $\pi^- p \rightarrow$ phi phi n have been doubled to a total of 6658 events, allowing extension of the phi phi partial wave analysis. A three-pole K-matrix fit was also obtained and Breit Wigners parameters deduced. Mass spectra, amplitudes from the partial wave analysis, and Argand diagrams for each wave are given. (LEW)

48748 (CEA-N—2505) Study of the production of muon pairs at the Petra e/sup +/e/sup -/ collider: measurements of the cross section and of the electroweak asymmetry. Ould Saada, F. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique des Particules Elementaires). Nov 1986. 267p. (In French). NTIS (US Sales Only), PC A12/MF A01. File Number DE87752580.

The production of muon pairs is studied using the CELLO detector operating on the e/sup +/e/sup -/ collider PETRA at the DESY laboratory in Hamburg (West Germany). An integrated luminosity of 45 pb/sup -1/ has been accumulated between $\sqrt{S}$ = 38.3 GeV and $\sqrt{S}$ = 46.8 GeV in the center of mass system. At these energies the interferences between the photon and the neutral intermediate boson Z/sup 0/ gives rise to a sizeable forward-backward charge asymmetry. The total cross-section measured at different energies follows the 1/S dependence predicted by quantum electrodynamics. The asymmetries measured at the average energies of $\langle\sqrt{S}\rangle$ = 39 GeV and $\langle\sqrt{S}\rangle$ = 44 GeV are in good agreement with the values predicted by the Standard Model, -11.3% and -15.3% respectively. The results obtained are compatible with those other PETRA experiments.

48749 (DOE/ER/02289—T5) [High energy experimental physics]: Progress report. Rosen, J. (Northwestern Univ., Evanston, IL (USA)). 1987. Contract AC02-76ER02289. 171p. NTIS, PC A08. File Number DE87013516.

This report discusses experiments done at Fermilab. Studies are done on the production of charm particles in hadronic interactions, drift chambers, Fastbus routines and microcodes for High Energy Physics experimental application. Also Budget and future experimental proposals are considered. (LSP)

48750 (EFI—812(39)-85) Exotic baryon resonances. Modern status. Possibilities to search and investigate. Bagdasaryan, L.S.; Galumyan, P.I.; Grigoryan, A.A.; Kazaryan, S.P.; Khachatryan, G.N.; Oganesyan, A.G.; Vartapetyan, H.H. (Erevanskij Fizicheskij Inst. (USSR)). 1985. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87702883.

A possibility to investigate the exotic baryon resonances with qqqqq quark composition, in the systems $p\pi$/sup +/π/sup +/, $\Lambda\pi$/sup -/π/sup -/, Σ/sup -/π/sup -/, etc. possessing exotic quantum numbers of isospin is considered. The most favourable reactions and kinematical regions where an effective search for the exotic baryons is possible are grounded. The contribution of the background subprocesses to the investigated systems is analyzed in various reactions and momenta configurations of the particles. The analysis shows that the search for the I=5/2 resonances in the system $p\pi$/sup +/π/sup +/(Δ/sup ++/π/sup +/) is more reasonable in the π/sup +/p-interaction process, this system carrying the main portion of momentum in the lab. system. The exotic hyperons with S=-1 srangeness and I=2 isospin are to be searched in the fast-flying systems $\Lambda\pi$/sup -/π/sup -/ (Σ*/sup -/(1385)π/sup -/

) and Σ/sup -/π/sup -/ produced in the reactions on the K/sup -/ beams. The cross sections of the production of the E/sub 55/-baryon (J/sup p/=5/2/sup +/, I=5/2) in the π/sup +/p -> E/sub 55//sup +++/π- and π/sup +/p -> E/sub 55//sup ++++/ x processes are theoretically estimated. The estimations show that in the experiments with the OMEGA spectometer at CERN one can get a substantial increase in the statistics as compared to that available, thus providing a detailed analysis of the pπ/sup +/π/sup +/ system on the high confidence level. The question of investigation of the exotic baryon Regge trajectories in the processes of the inclusive production of ordinary (nonexotic) Δ/sup ++/(1232), Σ*/sup +/(1385)- and Σ/sup +/-resonances in the π/sup -/-beam fragmentation region is also considered. 31 refs.

48751 **(IFVE-OEF—85-93) Relative yields of the eta mesons produced by 10 GeV pions and kaons.** Akimenko, S.A.; Belousov, V.I.; Blik, A.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 8p. (In Russian). (SERP-E—102). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702897.

The relative yield of eta-mesons produced by positive kaons and pions in the beam fragmentation region X/sub F/ > 0.5 was measured by means of the lead glass Cerenkov hodoscope. The data relation to the singlet-octet mixing angle value and some dynamic details of the eta-production are discussed in frames of the quark fusion model. 10 refs.; 3 figs.

48752 **(IFVE-OEF—86-132) Oscillations of polarization asymmetry in the π/sup -/parrow up -> π/sup 0/n reaction in the range of tau ≦ 3(GeV/c)/sup 2/.** Apokin, V.D.; Arestov, Yu.I.; Belikov, N.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 4p. (In Russian). (SERP-E—149). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702898.

Submitted to the journal Sov. J. Nucl. Phys. .

The polarization asymmetry in the π/sup -/p -> π/sup 0/n reaction up to t — 3 (GeV/c)/sup 2/ has been measured for the first time. The measurements have been carried out at 40 GeV/c. The asymmetry oscillations have been observed at t ≦ 3 (GeV/c)/sup 2/. The results are compared with theoretical models. 10 refs.; 1 fig.; 1 tab.

48753 **(IFVE-OEF—86-155) Observation of a narrow meson with a mass of 1750 MeV decaying into etaeta pair.** Aldi, D.; Binon, F.; Brikman, K. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702899.

Submitted to the journal Zh. Ehksp. Teor. Fiz. .

A narrow meson is observed in π/sup -/p collisions at 38 GeV/c which decays into etaeta pair. The experiment has been performed at the Serpukhov accelerator using GAMS-2000 multiphoton hodoscope spectrometer. The mass of this new meson state is 1750 +- 8 MeV. Its width is less than 50 MeV. The spin-parity is J/sup PC/=0/sup ++/ or, less probable, 2/sup ++/; the isospin and G-parity is O/sup +/. The production cross section σ x BR is found to be 3.5 +- 1.5 nb. The t-dependence of the cross section is described by exp(b-bart) with the slope b-bar=3.8 +- 1.5 (GeV/c)/sup -2/. 11 refs.; 3 figs.

48754 **(IFVE-OEIPK—85-20) Study on the multiple pion production in the nondiffraction exclusive K/sup -/p interactions at 32.1 Gev/c.** Patalakha, D.I.; Bumazhnov, V.A.; Bogolyubskij, M.Yu. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702900.

Submitted to the journal Sov. J. Nucl. Phys. .

The multipion production in the exclusive nondiffractive reactions K/sup -/p -> K/sup -/pl (π/sup +/π/sup -/), 1 ≦ l ≦ 4, at 32 GeV/c is studied. The diffractive component in reactions K/sup -/p -> K/sup -/p π/sup +/π/sup -/ and K/sup -/p -> K/sup -/p2 (π/sup +/π/sup -/) was selected by the maximum rapidity gap method. It is shown, that an independent emission model (IEM) with the leading particle effect taken into account can reproduce the main features of the longitudinal and transverse momenta distributions of pions. However the π/sup -/-mesons emitted in the forward hemisphere of the c.m.s. are systematically more fast than it is predicted by IEM. The azimuthal correlations between the transverse momenta of the pions and the leading hadrons are also studied. 11 refs.; 8 figs.; 2 tabs.

48755 **(IFVE-OEIPK—86-158) Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers.** Aziz, T.; Bailli, D.L.; Banerzh'e, S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702901.

Submitted to the journal Sov. J. Nucl. Phys. .

The inclusive production of strange meson and baryon resonances in 360 GeV/c pp interactions have been studied. Cross sections for K*+(892) are estimated to be 4.42 +- 0.62 mb and 2.54 +- 0.47 mb, and those for Σ/sup +/(1385) and Σ/sup -/(1385) are 0.67 +- 0.11 mb and 0.26 +- 0.07 mb, respectively. Longitudinal and transverse momentum distributions for K*(892) and Σ(1385) are presented as well as for their decay products K/sub s//sup 0/ and Λ. It is shown that approximately 50 % of all K/sub s//sup 0/ are decay products of K*, and more than 28 % of all Λ originate from Σ*/sup +-/ decays. Distributions over X/sub F/ and p/sub T//sup 2/ variables of indirect K/sub s//sup 0/ and Λ mainly reproduce the shape of the corresponding distributions for all K/sub s//sup 0/ and Λ. 31 refs.; 8 figs.; 2 tabs.

48756 **(IFVE-OEIPK—86-168) Neutral and charged D/sup */ meson production in pi /sup -/p interactions at 360 Gev/c.** Agyular-Benitez, M.; Allison, V.V.; Bagg, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702902.

Submitted to the jornal Sov. J. Nucl. Phys. .

The inclusive cross sections for forward D* meson production at 360 GeV/c in π/sup -/p interactions are determined: (π/sup -/p -> D*/sup +-/ + X; x/sub F/ > 0)= (5.0+2.3)-(5.0-1.8) μb, (π/sup -/p -> D*/sup 0/ + X; x/sub F/ > 0) = (7.3 +- 2.9) μb. The D* mesons are produced centrally, without any significant non-central component. D* production dominates the total charm D meson production and, in particular, saturates D/sup 0/ production. 8 refs.; 5 figs.

48757 **(IFVE-ONF—85-188) Neutral strange particle production in neutrino interactions of charged current at energy of 3-30 GeV.** Ammosov, V.V.; Ardashev, E.N.; Ivanilov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702903.

Submitted to the journal Zeit. Phys. .

Neutral strange particle production in neutrino interactions with nuclei in the SCAT bubble chamber has been studied. The neutrino energy dependence and hadron system invariant mass square dependence of yields for K/sup 0/-mesons and Λ-hyperons has been discussed. The estimations of total yields of strange and charm particles have been made. The behaviour of inclusive spectra for neutral strange particle has been investigated. 20 refs.; 6 figs.; 5 tabs.

48758 **(IFVE-ONF—86-94) Inclusive production of rho/sup 0/ and K/sup *0/ mesons in the ν-bar/sub μ/N charged-current interactions.** Ammosov, V.V.; Burtovoj, V.S.; Gapienko, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703237.

Submitted to the journal Yad. Fiz. .

Inclusive rho/sup 0/ and K*/sup 0/ production has been studied in ν-bar/sub μ/N charged current interactions, using a sample of 4030 events obtained in 15-ft bubble chamber filled with a 64% Ne-H/sub 2/ mixture and exposed in the FNAL wide-band antineutrino beam. An average multiplicities of 0.13 +- 0.02 rho/sup 0/ and 0.049 +- 0.014 K*/sup 0/ per event at a mean hadronic mass W of 4.3 GeV are obtained. Corresponding ratios of these mean multiplicities to ones of π/sup -/ and K/sup 0/ mesons are equal <n(rho/sup 0/) >/<n(π/sup -/)>=0.070 +- 0.015 and <n(K*/sup 0/)>/>n(K/sup 0/)>0.26 +- 0.08. The rho/sup 0/ production properties are studied in terms of various kinematical variables. The experimental results are compared with those obtained from (anti)-neutrino-proton interactions and with predictions of the Lund fragmentation model. 27 refs.; 7 figs.

48759 **(IFVE-ONF—86-135) Study on the inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons in quark jet of ν-barN interaction of charged current.** Ammosov, V.V.; Burtovoj, V.S.; Gapienko, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703238.

Submitted to the journal Sov. J. Nucl. Phys. .

Inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons have been studied in the antineutrino charged current induced quark jet, using a sample of 3000 events obtained in the Fermilab 15-ft bubble chamber, Z-distributions of the rho/sup 0/, K*/sup 0/ mesons and N(rho/sup 0/)/N(π/sup 0/), N(K*/sup 0/)/N(rho/sup 0/) ratios in the jet are measured. The fraction of leading charged pions resulting from the rho/sup 0/ decays are estimated. The experimental data are compared with predictions of the Lund fragmentation model. 18 refs.; 5 figs.

48760 **(IFVE-ONF—86-160) Charged current antineutrino-induced coherent negative pion production off neon.** Ammosov, V.V.; Bel'kov, A.A.; Asratyan, A.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703240.

Submitted to the journal Sov. J. Nucl. Phys. .

Antineutrino scattering off neon nuclei have been used to select 61 +- 12 events of negative pion coherent production. The obtained experimental data have been compared with theoretical predictions and with results of some other experiments. The values obtained for coherent production of negative pions at different antineutrino energies do not contradict the experimental results and theoretical model predictions. 14 refs.; 5 figs.

48761 **(ITEF—53-1985) Correlations of cumulative hadrons in hadron-nuclear interactions.** Bayukov, Yu.D.; Vlasov, A.V.; Vorob'ev, L.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 19p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703273.

Dependences of correlation coefficient R/sub pp/ of cumulative protons on their energy in π/sup -/A interaction with incidence π/sup -/-meson momenta of 2.5 GeV/c (on Al, Cu, V nuclei) and 5.0 GeV/c (on V nucleus), as well as R/sub pd/ and R/sub ppp/, are investigated. Conclusions are made that R/sub pp/ dependence on total energy of secondary particles is weak. R/sub pp/ in π/sup -/V interactions increases with an increase in π/sup -/-meson initial momentum. For the above-mentioned initial momenta of π/sup -/-mesons R/sub pp/ values in π/sup -/A interactions are lower than in pA interactions at 7.5 GeV/c. R/sub pd/ was measured in the pPb reaction at 7.5 GeV/c. Correlation coefficients of R/sub pd/ and R/sub pp/ are similar. 13 refs.; 4 figs.

48762 **(ITEF—76-1986) Study on the baryon exchange π/sup +/ + p -> Δ/sup ++/ + rho/sup 0/ reaction at 3.94 GeV/c.** Aref'ev, A.V.; Bayukov, Yu.D.; Grishuk, Yu.G. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 23p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703275.

The reaction of simultaneous resonance production of Δ/sup ++/ and rho/sup 0/ on hydrogen is studied at 3.94 GeV/c π/sup +/-meson momentum in the range of variation of transferred momentum squared 0 $\leqq$ U' = U/sub max/ - U $\leqq$ 0.6 GeV/sup 2/. The measured parameters of the differential cross section dσ/dU'=A x exp (-BxU') of production reaction of Δ and rho resonances are equal to B=1.77 +- 0.3 GeV/sup 2/; A=26.6 +- 4.0 μb/GeV/sup 2/. The resonances are produced in baryon exchange reaction. 12 refs.; 12 figs.

48763 **(ITEF—97-1985) Search for the charm particles in neutrino experiment with nuclear photoemulsion placed inside the Fermilab 15-foot bubble chamber.** Vojvodik, L.; Smart, V.; Vajsenberg, A.O. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 27p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87703278.

Results of experiment on search for charmed particle decay are presented. Cryogenically sensitive BR-2 nuclear photoemulsion placed inside the Fermilab 15-foot bubble chamber was exposed to the wide-band muon neutrinos beam. Analysis of five detected short-lived particles decay, four of which are identified as decays of D/sup +/, D/sup 0/, D/sup 0/ and Λ/sub c//sup +//F/sup +/ charmed particles, is presented. 10 refs.; 5 figs.; 2 tabs.

48764 **(ITEF—130-1986) Production of cumulative protons with 0.6-1.83 GeV/c momenta.** Boyarinov, S.V.; Gerzon, S.A.; Kats, M.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 22p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703286.

Invariant cross sections of cumulative proton production on Be, Al, Cu, Ta nuclei with large cumulative numbers up to X=4 have been measured. Directions for the interaction of an incident proton with more than six nuclear nucleons and for the change in the character of the invariant cross section dependence on the transverse momentum at X $\simeq$ 1.8 are obtained. 22 refs.; 11 figs.

48765 **(ITEF—150-1986) Search for the exotic baryon resonances with isospin I=5/2 in the π/sup +/p -> pπ/sup +/π/sup +/π/sup -/ reaction at π/sup +/ meson momentum of 3.94 GeV/c.** Aref'ev, A.V.; Bayukov, Yu.D.; Grishuk, Yu.G. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703289.

For the first time, in the π/sup +/p -> pπ/sup +/π/sup +/π- reaction at 3.94 Gev/c initial momentum an experimental evidence has been observed for exotic resonances with I=5/2 isospin and masses of 1.48 +- 0.02 and 1.65 +- 0.03 GeV in π/sup -/-backward production. In the transfer momentum interval u' < 0.1 GeV/sup 2/ production cross sections for M/sub 1/=1.48 and M/sub 2/=1.65 GeV/c/sup 2/ resonance equal, respectively, σ/sub 1/=0.35 +- 0.08 σ/sub 2/=0.37 +- 0.13 μb. 7 refs.; 9 figs.

48766 **(LAL—86-29) Observation of eta/sub c/ -> rho/sup 0/rho/sup 0/ and review of other eta/sub c/ decay modes.** Jean-Marie, B. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Oct 1986. 4p. (CONF-860701—85). NTIS (US Sales Only), PC A02/MF A01. File Number DE87752584.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Branching ratio measurements for eta/sub /c decays into PHIPHI, K/sup +/K/sup -/eta/sup 0/, K/sup 0//sub S/K/sup +-/π/sup -+/, pantip are presented. For the previously unobserved rho/sup 0/rho/sup 0/ mode a preliminary measurement is reported. The dominant contribution of the rho/sup 0/rho/sup 0/ intermediate state to the eta/sub c/ decay into 4π/sup +-/ is evidenced by a multichannel analysis and strongly supported by the study of pseudoscalar contribution and rho mass cuts. 8 refs.

48767 **(LAL—86-37) Recent results on jet-physics and QCD tests by UA1 and UA2 at the CERN proton-antiproton collider.** Fayard, L. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). Nov 1986. 24p. (CONF-860977—3). NTIS (US Sales Only), PC A02/MF A01. File Number DE87752585.

From Antiproton '86: European symposium on nucleon-antinucleon interactions; Thessalonika, Greece (1 Sep 1986).

The jet cross-sections of the UA1 and UA2 experiments at CERN are discussed and compared with the predictions of QCD at order α/sub s//sup 2/ (inclusive and two-jet cross sections), α/sub s//sup 2/ (three-jet events), α/sub s//sup 4/ (four-jet events). Inclusive cross-section has been measured for production of high-P/sub T/ direct photons and is compared with QCD predictions. A status report is given on the search for the decay of the intermediate vector bosons W and Z into a quark-antiquark pair. 13 figs., 39 refs.

48768 **(LBL—23548) rho$^0\gamma$ production in photon photon interactions.** Derby, K.A. (Lawrence Berkeley Lab., CA (USA)). Aug 1987. Contract AC03-76SF00098. 104p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE88000474.

The subject of this dissertation is the production of the rho$^0\omega$ final state in photon photon interactions. The production of the rho$^0\omega$ final state has been of interest primarily because of its similarity to the related process $\gamma\gamma \rightarrow$ rho^{0}rho^0. The cross section for rho^{0}rho^0 production demonstrates a peaking near threshold, the mechanism of which has been the subject of considerable speculation. The data sample used for the analysis was obtained using the TPC detector facility at the PEP e^+e^- storage ring, and corresponds to an integrated e^+e^- luminosity of 64 pb^{-1} at 29 GeV center of mass energy. Our estimate of the rho$^0\omega$ cross section is compared to the predictions of several models which have been used to account for the observed rho^{0}rho^0 cross section. The experimental results are consistent with the predictions of a threshold enhancement model, as well as those of a four quark (qq anti q anti q) resonance model. However, they disagree with the predictions of a t-channel factorization approach.

48769 (LBL-PUB—615, pp A.19-A.27) **High energy elementary particle physics.** Emmanuelli, J.L. Sep 1986. NTIS, PC A11/MF A01. File Number DE87012028.

In Lawrence Berkeley Laboratory, Jackson State University, Ana G. Mendez Educational Foundation Consortium: Progress report, October 1985-September 1986.

This research focuses on cryo-cycling testing of kapton covered multilayer board in order to observe the behavior and continuity of the signal traces of each board at low temperature conditions, which is a requirement of the liquid argon calorimetry.

48770 **(SLAC-PUB—4386) Experimental studies of electromagnetic properties of few body systems.** Bosted, P.E. (American Univ., Washington, DC; Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Aug 1987. Contract AC03-76SF00515. 8p. (CONF-8706200—1). NTIS, PC A02. File Number DE87014610.

From CEBAF summer workshop; Newport News, VA, USA (22 Jun 1987).

An overview is given of some recent and planned experiments which have or will substantially increase our knowledge of the electromagnetic properties of few body systems. Specific examples include the proton and neutron elastic form factors, the deuteron elastic form factors, deuteron threshold electrodisintegration and quasi-elastic scattering, deuteron photodisintegration, and finally measurements of cross sections in deep inelastic scattering from hydrogen, deuterium, and iron. 47 refs., 13 figs. (DWL)

48771 **Search for neutral heavy leptons from ν - N scattering.** Mishra, S.R.; Auchincloss, P.; Blair, R.; Haber, C.; Leung, W.C.; Ruiz, M.; Oltman, E.; Sciulli, F.J.; Shaevitz, M.H.; Smith, W.H.; and others. (Columbia University, New York, New York 10027). *Physical Review Letters;* **59**: No. 13, 1397-1400(28 Sep 1987).

Results are presented on a search for neutral heavy leptons that couple to muon neutrinos in high-energy neutrino-nucleon interactions (E/sub ν/ = 30—230 GeV). No evidence for such particles is observed. We obtain upper limits on the coupling of neutral neavy leptons to ν/sub μ/ below Fermi strength in the mass range 0.25—14 GeV/c^2.

48772 **New results on the E(1420)/iota(1460) meson in hadroproduction.** Chung, S.U. (Brookhaven National Lab., Upton, NY 11973). pp 725-728 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC02-76CH00016.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

A mini-review, with emphasis on new results, is given on the status of the hadroproduced E(1420)/iota (1460) meson in the decay channels eta$\pi\pi$ and KK-barπ. The BNL data at twice the statistics of the previously published event sample show clearly a J/sup PG/ = 0/sup -+/ $\delta(980)\pi$ state with a phase motion characteristic of a resonance.

48773 **Some advanced accelerator projects and ideas.** Sessler, A. (Lawrence Berkeley Lab., Berkeley, CA 94720). pp 1523-1527 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author discusses projects and ideas represented, as follows: The motivation is to secure high gradients to reduce power to a reasonable amount, and reduce the length as a consequence of the high gradient; a promising solution is offered by a possibility of having a free electron laser in conjunction with induction units resulting in the following steps: A free electron laser (FEL) to generate high peak power (30 GHz, 10 times the frequency at SLAC, so the wave length is one centimeter instead of ten centimeters); translate this radiation to a conventional high gradient accelerator structure, a conventional linac so that it results in stability and all the positive things known about ordinary linacs; this becomes a power source; use induction units to pump up low energy beams and accelerate little bunches of $10^{\prime\prime}$ electrons up to a few hundred GeV; the schematic of such a system is exemplified with a low energy beam which is a kilo-amp of tens of MeVs; between the FEL sections, energy returns with induction units; and wave guides take rf power to a conventional linac structure - a high gradient linac structure.

6452 Particle Interactions And Properties - Theoretical

48774 **(CEA-N—2479-Rev.1) Survey of research in elementary particle physics.** Baton, J.P.; Cohen-Tannoudji, G. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique des Particules Elementaires). Oct 1986. 170p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE87752575.

These notes are devoted to the current trends in elementary particle physics. They are not intended for the training of experts in the field. After a brief historical survey, one discusses the difficulties which have made necessary to move from classical physics to relativistic quantum physics. The main concepts of this new theory are rapidly presented. The experimental methods are discussed within a few typical experiments, already performed or scheduled. The main questions which are still unsolved are rapidly mentioned.

48775 **(DOE/ER/40200—099) Angular distribution of W boson pairs at a heavy Z-resonance.** Nandi, S.; Rizzo, T.G. (Oklahoma State Univ., Stillwater (USA). Dept. of Physics; Texas Univ., Austin (USA). Center for Particle Theory). May 1987. Contract FG05-85ER40215;W-7405-ENG-82;FG05-85ER40200. 15p. (IS-J—2503). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014585.

In theories with an extra U(1) gauge boson (Z_θ) at low energies. W boson pairs may be produced copiously by the process $e^+e^- \rightarrow Z_\theta \rightarrow W^+W^-$ at the Z_θ-resonance. We show that the angular distribution of the W pairs (produced at the Z_θ-resonance) is very different from that in the standard model, at the same center of mass energy, where it is dominated by t-channel neutrino exchange. These distributions will also be useful in distinguishing amcng the various models containing an extra Z-boson.

48776 **(DOE/ER/40200—100) Gluon production of gauge bosons.** Dicus, D.A.; Kao, Chung; Repko, W.W. (Texas Univ., Austin (USA). Center for Particle Theory; Michigan State Univ., East Lansing (USA). Dept. of Physics and Astronomy). Jun 1987. Contract FG05-85ER40200. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014590.

We determine the contribution to $pp \rightarrow ZZ + X$ from gluon gluon $\rightarrow$ ZZ by evaluating the relevant box diagrams.

48777 **(DOE/ER/40200—104) E_6 exotic quark production in ep collisions.** Hewett, J.L. (Texas Univ., Austin (USA). Center for Particle Theory). Jun 1987. Contract FG05-85ER40200. 15p. (IS-J—2501). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014588.

We examine the possibility of producing exotic quarks from E_6 theories via flavor changing couplings in high energy ep collisions at HERA and the proposed LEP x LHC. We find that the rate is rather small and very mixing angle dependent. Assuming maximal mixing, the production rates are $\simeq$10 to 30 events per year at HERA (for masses up to 100 GeV) and $\simeq$200 events per year at LEP x LHC (for masses up to 300 GeV).

48778 **(DOE/ER/40200—114) Research program in elementary particle theory: Progress report, January 1, 1987-December 1987.** Sudarshan, E.C.G.; Dicus, D.A. (Texas Univ., Austin (USA). Center for Particle Theory). Aug 1987. Contract FG05-85ER40200. 89p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE88000159.

Progress is reported in the areas of: strings and gauge theories, mathematical physics and quantum optics, high energy physics phenomenology, quantum chromodynamic sum rules, and application of particle physics to astrophysics. Titles of DOE reports resulting from this research are listed, and the research histories of the scientific staff of the Center for Particle Theory are given. (LEW)

48779 **(DOE/ER/40252—2) Theoretical studies of phenomenological models of nuclear chromodynamics: Progress report, January 1, 1987-December 31, 1987.** Parmentola, J.A. (West Virginia Univ., Morgantown (USA)). Sep 1987. Contract FG05-86ER40252. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014901.

During the second year of this research program significant progress has been made on the following research problems: (1) in computing nucleon electric form factors and pion-nucleon scattering in our pionic nontopological soliton model; (2) in computing meson-soliton scattering in a topological soliton model in 1 + 1 dimensions; (3) on the completion of a thesis which involved the establishment of a quantitative connection between a free relativistic and free nonrelativistic quantum field theory of scalar bosons.

48780 **(DOE/ER/40272—39) Exotic (E_6) particles in e^+e^- annihilation.** del Aguila, F.; Laermann, E.; Zerwas, P. (Florida Univ., Gainesville (USA). Dept. of Physics). Apr 1987. Contract FG05-86ER40272. 59p. (UFTP—87-11). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014591.

Fermion mixing is analyzed in (E_6) extensions of the standard model. Cross sections and signatures for the production in present and future e^+e^- colliders are discussed in detail.

48781 **(IFVE-OTF—85-10) Inclusive spectra in hard processes.** Kiselev, A.V.; Petrov, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703248.

The hadron inclusive spectrum in deep inelastic lepton-hadron scattering is calculated. By comparing it with the analogous distribution in e/sup +/e/sup -/-annihilation, it is concluded that the inclusive spectrum of soft hadrons is described in hard processes by the universal function. 9 refs.

48782 **(IFVE-OTF—85-68) Description of the total cross sections rise in the gluon dominance model.** Dzhaparidze, G.Sh.; Yushchenko, O.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702904.

Proceeding from the gluon dominance model, a simple scheme to describe the increase of total cross sections is proposed. This increase is described by the quantities characterising the quark-gluon structure of a hadron, namely, by the valence quark number and the momentum fraction of a hadron carried by partons. The present scheme allows one to obtain the numerical relations for the growing parts of σ/sub tot/ for various particles. 22 refs.; 1 fig.; 2 tabs.

48783 **(IFVE-OTF—85-113) Possibility to test the excited quark hypothesis and define the quark quantum numbers.** Gershtejn, S.S.; Jickia, G.V.; Pirogov, Yu.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703249.

Submitted to the journal Sov. J. Nucl. Phys. .

In the framework of the hypothesis of an excited quark of spin 1/2 or 3/2, a systematic study is given to the exotic events at Spp-barS collider with a large missing transverse momentum and a hard jet (or several jets) accompanied or not by a charged lepton. The helicity production and decay amplitudes of the excited quark and the corresponding most general effective Lagrangians is analyzed. The jet angular distributions, transverse spectra of the missing momentum and charged leptons, as well as two- and three-particle correlations have been calculated. With aim to establish the existence of a heavy object, responcible for the exotic events, the investigation of its nature and the properties, the general procedure for analyzing the experimental data are considered. 22 refs.; 6 figs.

48784 **(IFVE-OTF—85-122) Theoretical group nature of an impact parameter and elastic scattering of hadrons.** Vall, A.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703250.

The impact parameter group has been obtained and studied on the basis of classical expressions for the vector components of minimum distance between two free spinless particles. The matrix elements of the main continuous unitary series have been calculated, they are quite a natural basis for elastic amplitude expansion. The final dimensional nonunitary series of the SO(2.1) group is shown to be able to describe scattering processes with impact parameter conservation. The corresponding elastic amplitude has been calculated and studied. 12 refs.

48785 **(IFVE-OTF—85-170) String model of hadrons and their interactions.** Borodulin, V.I.; Pron'ko, G.P.; Razumov, A.V.; Soloviev, L.D.; Zorin, O.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 16p. (CONF-850721—28). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703251.

From International Europhysics conference on high energy physics; Bari, Italy (18 Jul 1985).

Submitted to the International conference on high energy physics, Bari, Italy, Jul 18-24, 1985.

The present work studies the model of mesons belonging to the leading Regge trajectories. The model is based on the theory of the straight-line string. The quantum theory of such a string and its second quantization have been constructed. Account of massive quarks with a spin and flavour permits to elaborate the model so that the comparison with experiment will be possible. 5 refs.; 3 figs.; 2 tabs.

48786 **(IFVE-OTF—85-180) Gluonic structure and strong interactions of hadrons at high energies.** Kiselev, A.V.; Petrov, V.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703252.

Submitted to the journal Yad. Fiz. .

Observable consequences of the gluon dominance hypothesis for very high energy collisions of hadrons are presented. Possible relation of the Pomeranchuk trajectory to glueballs is discussed. 17 refs.

48787 **(IFVE-OTF—86-50) Model for dynamical chiral symmetry breaking and quark condensate.** Nekrasov, M.L.; Rochev, V.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703254.

Submitted to the journal Theor. Math. Phys. .

In the framework of the model, proposed earlier to describe nonperturbative QCD, the singularity of the type 1/k/sup 4/ in the gluon propagator is shown to result in dynamical chiral symmetry breaking and appearance of quark condensate. The value, obtained for quark condensate, is close to the phenomenological one. 12 refs.

48788 **(IFVE-OTF—86-89) Inverse scattering method and one-zone approximation in relativistic string theory.** Pron'ko, G.P.; Razumov, A.V.; Solov'ev, L.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703255.

Consistent quantization of a relativistic string in four-dimensional space-time has been considered in the framework of the inverse scattering method. A one-zone (straightline) approximation and its application for the description of meson decay are discussed. 13 refs.

48789 **(IFVE-OTF—86-99) Effective way of reconstructing structure functions on their moments.** Batunin, A.V.; Kartvelishvili, V.G. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703256.

To improve significantly the accuracy is proposed to reconstruct the structure functions not using the first, second and subsequent moments, but the specially chosen moment set. On the basis of the computered structure functions the calculations of the parton luminosity, heavy quark and lepton pair production, W/sup +-/- and Z/sup 0/-boson and higgs-boson productions are made in pp- and p-barp-interactions for the expected UNK energies. 10 refs.; 6 figs.; 2 tabs.

48790 **(IFVE-OTF—86-100) Comparison of hadron multiplicities in gluon and quark jets.** Dzhaparidze, G.Sh. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 4p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703257.

The ratio r of hadron multiplicities in gluon and quark jets is considered. The asymptotic value r=9/4 is shown to decrease due to heavy quark-effects. The estimation of r following from perturbative QCD, explains the PEP data. 7 refs.

48791 **(IFVE-OTF—86-123) Infrared asymptotics of gluonic Green functions in covariant gauge.** Arbuzov, B.A.; Boos, Eh.Eh.; Davydychev, A.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703258.

Submitted to the journal Theor. Math. Phys. .

The problem of compatibility of singular infrared asymptotics of the gluon propagator D(k) — M/sup 2//k/sup 4/ and the corresponding gluonic vertices and Schwinger-Dyson equations in the covariant gauge is studied. For asymptotics under discussion the most infrared singular two-loop terms are evaluated. The particular covariant gauge is shown to exist in which the selfconsistent description in the infrared region of the lower gluonic and gost Green functions is realized. 17 refs.

48792 **(IFVE-OTF—86-152) Meson mass spectrum in generalized quark field model.** Khrushchev, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703260.

Submitted to the journal Sov. J. Nucl. Phys. .

A hadron model with independent constituents, described by bilocal fields is considered. Equations describing the biological field with values belonging to Grassmann algebra are proposed. In the "instanteneous interaction" approximation mass formulae for light mesons and the spectrum of radially excited states for π, rho, K- and K*-mesons have been obtained. 9 refs.; 1 tab.

48793 **(IFVE-OTF—86-153) On account for contribution from anomalous Zγll interaction in e/sup +/e/sup -/ -> $\nu\nu$-barγ process.** Komachenko, Yu.Ya.; Larin, V.N.; Tikhonin, F.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703261.

A contribution from anomalous Zγll interaction in e/sup +/ e/sup -/ -> $\nu\nu$-bar γ process has been considered. It is shown that at high energies such an interaction will make up a considerable background for exPeriments on determining the number of neutrino types. 16 refs.

48794 (INIS-SU—409, pp 26-29) **On properties of the third pseudoscalar isosinglet.** Efrosinin, V.P.; Zaikin, D.A. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780002.

Kratkie Soobshcheniya po Fizike.; (no.10).

In Experimental and theoretical physics. Collection.

The mass range for possible detection of the ground state of the third O/sup -/ isosinglet eta" is determined. The situation with the description of electromagnetic decays of pseudoscalar isosinglets is discussed. 14 refs.; 2 figs.; 2 tabs.

48795 (INIS-SU—409, pp 30-32) **Off-mass-shell behaviour of πN amplitude and parameters of pion-nuclear optical potential.** Efrosinin, V.P.; Zaikin, D.A.; Osipchuk, I.I. (AN SSSR, Moscow. Inst. Yadernykh Issledovanij). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780002.

Kratkie Soobshcheniya po Fizike.; (no.10).

In Experimental and theoretical physics. Collection.

The calculation of two-nucleon parameters of s-wave part of pion-nuclear optical potential is performed. The importance of taking into account the off-mass behaviour of πN-amplitude in this calculation is stressed. 11 refs.; 2 figs.; 1 tab.

48796 (INIS-SU—413, pp 39-43) **Pions polarizability and H(1190) meson.** L'vov, A.I.; Petrun'kin, V.A. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE88780003.

Kratkie Soobshcheniya po Fizike.; (no.12).

In Quantum radiophysics. Collection.

Saturation of sum rules (SR) for α/sub π/ and β/sub π/ pion polarizabilities is performed. It is shown, that the account of H

meson with the width G/sub H->$\gamma\pi$/ — 2 MeV eliminates divergence between SR and chiral model predictions. The found values $(\alpha+\beta)$/sub π(sup +-)/ — 0.03; $(\alpha+\beta)$/sub π(sup 0)/ — 1.3; α/sub π(sup +-)/ — 5 (in 10/sup -43/ cm/sup 3/ units) agree with the experimental data. 20 refs.; 1 tab.

Kratkie Soobshcheniya po Fizike.; (no.12).

In Quantum radiophysics. Collection.

Pomeron trajectory and vector meson trajectory type in the time-like region is found within the framework of the approach, taking account of the relativistic kinematics. The reason for the qualitative difference of their properties under low energies is discovered and assessment of masses and dimensions of tensor gluonium and light vector mesons is made. 7 refs.; 1 fig.

48798 (INIS-SU—415, pp 5-17) **Unique algorithm for calculation of inclusive cross sections of particle production with big transverse momenta and of cumulative type hadrons.** Stavinskij, V.S. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780178. (N—18-86).

In JINR rapid communications. Collection.

Unique algorithm is proposed for calculating inclusive cross sections of particle production with big transverse momenta and cumulative type hadrons. A possibility of unique description of these processes is due to introduction of a new argument - of minimal energy of colliding constituents needed for the production of observed particle. 26 refs.; 3 figs.; 2 tabs.

48799 (INIS-SU—416, pp 19-26) **Description of multiple processes on the basis of triangulation in the velocity space.** Baldin, A.M.; Baldin, A.A. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of High Energy; AN SSSR, Moscow. Inst. Yadernykh Issledovanij). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780179. (N—17-86).

In JINR rapid communications. Collection.

A method of the construction of polyhedrons in the relative four-velocity space is suggested which gives a complete description of multiple processes. A method of the consideration of a general case, when the total number of the relative velocity variables exceeds the number of the degrees of freedom, is also given. The account of the particular features of the polyhedrons due to the clusterization in the velocity space, as well as the account of the existence of intermediate asymptotics and the correlation depletion principle makes it possible to propose an algorithm for processing much larger bulk of experimental information on multiple processes as compared to the inclusive approach. 7 refs.; 1 tab.

48800 (INIS-SU—416, pp 27-31) **Decay of K/sub S//sup 0/ -> $\gamma\gamma$ in the chiral theory.** Bel'kov, A.A.; Kalinovskij, Yu.L.; Pervushin, V.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij; Gomel'skij Politekhnicheskij Inst., Byelorussian SSR; Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Theoretical Physics). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780179. (N—17-86).

In JINR rapid communications. Collection.

The decay of K/sub S//sup 0/ -> $\gamma\gamma$ is considered in the framework of the chiral theory. The Lagrangian of weak interaction stricktly satisfies the rule $\Delta T=1/2$ and has the current form. The meson currents are a nonlinear realization of SU(3)xSU(3) - chiral symmetry. No additional phenomenological parameter is needed to take into account the mechanism of K/sub S//sup 0/ -> {2K, 2π} -> $\gamma\gamma$. Estimation of the decay branching ratio is found W(K/sub S//sup 0/ -> $\gamma\gamma$)/W(K/sub S//sup 0/ -> all)=7.9x10/sup -7/; W(K/sub L//sup 0/ -> $\gamma\gamma$)/W(K/sub S//sup 0/ -> $\gamma\gamma$)=8.3. 16 refs.; 4 figs.

Kratkie Soobshcheniya po Fizike.; (no.8).

In Experimental and theoretical physics. Collection.

Mixing of radical excitations of pseudoscalar isosinglets with n=2 is investigated. The ideal charater of their mixing in contrast to mixing in ground state is shown. The results presented testify in favour of interpretation of the first radial excitations of pseudoscalar isosinglets according to which eta(1275) is (n=2)-combination state of nonstrange quarks (u-baru+d-bard) $\sqrt{}$ with slight impurities s-bars and gg, whereas i (1440) represents practically completely the two-gluon state with n=2. The third isosinglet state with n=2 is s (1700)-meson consisting of a pair of strange quark and antiquark. 9 refs.

48805 (INS—573) **Present status of composite models in particle physics. Minimal composite model of 'elementary' particles and fields.** Terazawa, Hidezumi. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Mar 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702913.

The present status of composite models in particle physics is reviewed with emphasis on the minimal composite model. The subjects to discuss include 1) minimal composite model, 2) generations, 3) mass spectrum and 4) Miyazawa's SUSY and Nambu's SUSY.

48806 (INS—581) **Repetition of the quark-lepton states in a supersymmetric composite model with complementarity.** Yamada, Hirofumi; Yasue, Masaki. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Apr 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702915.

In a supersymmetric composite model based on an SU(4)/sub sc//sup loc/ confining theory, complementarity is used to support the symmetry-breaking pattern and spectrum of massless particles in a confining phase. The model is found to accommodate two generations of quarks and leptons as quasi Nambu-Goldstone fermions and another two generations as chiral fermions. Masses of composite particles are examined and the quark-lepton generations

are classified according to possible mass splittings. The suppression of dangerous flavor-changing interactions is also considered.

48807 **(INS—594) Dynamical aspects of supersymmetric composite models of quarks and leptons.** Yasue, Masaki. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jul 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702919.

Chiral symmetry breakings and spectrum of light composite particles including quarks and leptons are discussed in supersymmetric confining theories based on SU(N)/sub sc//sup loc/ with M-flavors for N ≦ M and with an extra antisymmetric 6/sub sc/ field for N = 4.

48808 **(INS—597) Symmetry breaking by Wilson loops and mass quantization.** Midorikawa, Shoichi; Tomiya, Mitsuyoshi. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jul 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702922.

Gauge symmetry breaking by the twisted boundary conditions is studied in a simple model. It is shown that these conditions can be obtained from singular gauge transformations on the vacuum and that the masses of vector bosons associated with the symmetry breaking is quantized due to the singular gauge transformations.

48809 **(INS—601) Relation between the masses of the first and second generations of quarks in a minimal composite model.** Terazawa, H. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Aug 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702924.

A specific picture in a minimal composite model for the generation of quarks in which quarks are two- and four-body composites in the first and second generation leads to the mass relation of m/sub c//m/sub s/ = (4 m/sub d/ - m/sub u/)/(4 m/sub u/ - m/sub d/), which may explain the largeness of m/sub c//m/sub s/.

48810 **(INS—602) Square-root sum rule for quark and lepton masses in a minimal composite model.** Terazawa, H. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Aug 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702925.

It is pointed out that the masses of quarks and leptons in the first generation may satisfy the square-root sum rule of m/sub e//sup 1/2/ - m/sub ν(sub e)//sup 1/2/ = m/sub d//sup 1/2/ - m/sub u//sup 1/2/, which suggests the quadratic form of Hamiltonian in "hypercharges" and the additivity of "hypercharges" in a minimal composite model of quarks and leptons.

48811 **(INS—603) Monopoles as probes for extra dimensions.** Midorikawa, Shoichi; Tomiya, Mitsuyoshi. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Aug 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702926.

The non-Abelian magnetic monopoles associated with symmetry breaking by the compactification of extra dimensions is considered. It is shown that the compactified space blows up inside the monopoles. It is also shown that the spherically symmetric singularity-free monopole (dyon) solutions put stringent constraints on the twisted boundary conditions of fermion fields.

48812 **(INS—607) Do quarks play an explicit role as nuclear constituents?.** Yamazaki, Toshimitsu. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Oct 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702930.

Experimental signatures for explicit roles of quarks as nuclear constituents are looked for. It is stressed that hyperons in nuclei may reveal unique information on nuclear interior and possible quark deconfinement. Future directions of hypernuclear spectroscopy are discussed.

48813 **(ITEF—44-1985) Low-energy supergravity and a light t quark.** Veselov, A.I.; Vysotskij, M.I.; Ter-Martirosyan, K.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 29p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87703272.

A simple method to construct a model of grand unification, which solves the problem of hierarchy in spontaneously violated supergravity is suggested. The N=1 supergravity has a great disadvantage since effective lagrangian L/sub eff/, describing the whole low-energy spectrum of new particles in the observable range E — M/sub W/, proved to depend on several parameters: m/sub 3/2/, γ, A, B and on the mass of the Higgs bosons. They are conditioned by the range of high energies E — M/sub p/ and are not known either theoretically or experimentally. Therefore, these parameters are considered to be assigned at E — M/sub x/, and renormgroup equations are used to determine all the coefficients in L/sub eff/ on the particle mass shell at E — 10/sup 2/ GeV. Thus, it is possible to "calculate" only conventionally the masses of new particles (i.e. of all supersymmetric partners of conventional particles): quarkino, gluino, leptino and Higgsino-Wiggsino (i.e. Z- and W-bozino) - i.e. to obtain their values for a certain range of values of four abovementioned parameters. The selected range $\mu' << m/sub 3/2/$ in the sector of leptino-quarkino scalar neutrino ν-tilde/sub tau,μ,e/ proved to be the lightest ones, and neutral Higgsino H-tilde/sub 0/ with masses of several GeV - the lightest ones among fermions. This particle is stable and it must be present among new particles decay products. 16 refs.; 3 tabs.

48814 **(ITEF—106-1986) A-dependence of conversed particles in high energy hadron-nucleus interactions.** Sibirtsev, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703282.

The A-dependence of conservated particles in high energy hadron-nucleus collisions is discussed in the framework of analytical solution of hadron evolution process equation. A-dependence was shown is significantly differ from A/sup 1/3/ usually expected by propagation of conservated particles through the nucleus tube. It was also shown that the cross section of hadron-nuclear nucleon interaction is about 3 times less than the hadron-free nucleon interaction one. 3 refs.; 6 figs.

48815 **(ITEF—119-1985) Angular correlations of particles produced in the π/sup -/p->K/sup 0/π/sup +-/ +X, π/sup -/p->K/sup 0/K/sup 0/-bar+X, π/sup -/p->K/sup 0/Λ+X reactions at 4.5 GeV/c momentum.** Arutyunyants, G.A.; Kiselevich, I.L.; Kulakov, V.P.; Mel'nichenko, I.A.; Silaev, V.I.; Shidlovskij, A.V.; Shkarpet, V.D. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703284.

Angular distributions among transverse momenta of secondary particles as well as angular correlations in the Gottfred-Jackson system of π/sup -/p -> K/sup 0/π/sup +-/ + X, π/sup -/p -> K/sup 0/K-bar/sup 0/ + X, π/sup -/p -> K/sup 0/Λ + X reactions at 4.5 GeV/c momentum have been investigated. 5 refs.; 6 figs.; 1 tab.

48816 **(ITEP—68-1985) On two-photon width of σ-meson.** Shabalin, E.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703306.

It is shown that a natural magnitude of the radiative width of the δ meson must be Γ/sub δγγ/ — 1 keV. The reason for which the published experimental number for Γ/sub δγγ/ seems to be too low is presented. 10 refs.; 2 figs.

48817 (ITEP—71-1985) Form factor πrhoγ in perturbative QCD. Gorskij, A.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702944.

Contribution from the hard scattering mechanism to πrhoγ form factor has been obtained. The calculation at all stages were performed with gauge invariant objects only and the large cancellations between two- and three particle contributions are absent in the final result. Equations of motion which connect the moments of twist 3 wave functions have been found. An algorithm of construction the solution of these equations, which also allows one to find asymptotic wave functions has been suggested. 14 refs.; 5 figs.

48818 (ITEP—112-1986) Self-energy operator of the d-s transition and the K/sub s/ -> 2π decays. Shabalin, E.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703308.

The regularized self-energy operator of the d-s transition Σ/sub Reg//sup ds/ calculated with gluon loop corrections taken into account has a value by α/sub S/M/sub W//sup 2//(πm/sub q//sup 2/) times larger than it has in the one-loop approximation. Using a method of evaluation permissing to express the amplitude a/sub 1/2/ of K/sub S/ -> 2π decay in terms of Σ/sub Reg//sup ds/ a value of a/sub 1/2//sup th/ practically coinsiding with the experimental one are obtained. 17 refs.; 6 figs.

48819 (ITEP—142-1986) What can we know about nature of the resonance σ(980) from the data on σ production in $\gamma\gamma$ collisions. Shabalin, E.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703310.

If a true width of the resonance δ is large, as it is usual for δ in the qq-bar and q/sup 2/q-bar/sup 2/ models, the data on the process $\gamma\gamma$ -> δ -> etaπ testify to preferance of the magnitude of width Γ/sub $\delta\gamma\gamma$/(M/sub δ/) — 1.3 KeV predicted by qq-bar model as compared with a value Γ/sub δ/γ/sub γ/(M/sub δ/) << 1 KeV predicted in the framework of the q/sup 2/q-bar/sup 2/ model. 18 refs.; 3 figs.

48820 (ITEP—164-1986) Dibaryon resonance 2.9 GeV in elastic backward π/sup -/d scattering. Chuvilo, I.V.; Kondratyuk, L.A.; Radkevich, I.A.; Ralchenko, Yu.V.; Vasilets, A.V.; Shevchenko, L.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703311.

It is shown that the structure in the elastic backward π/sup -/d-scattering found by ITEP group is due to the manifestation of the dibaryon resonance (DB) with the mass of 2.9 GeV. The partial widths X/sub πd/ and X/sub pp/ are defined from the joint analysis of these and other data. It is shown that it is impossible to describe the prominent peak in the reaction pp -> dπ/sup +/ in the framework of OPE model. The structure of DB(2.9) in the MIT bag model is discussed. 25 refs.; 5 figs.

48821 (ITEP—179-1985) Elastic pp scattering in the Coulomb-nuclear interference region and low energy behaviour of p-barp scattering partial amplitudes. Kudryavtsev, A.E.; Markushin, V.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703312.

The experimental data on the low energy elastic p-barp scattering in the Coulomb-nuclear interference region and on the shift and width of the 1s level of p-barp-atom are analysed. The partial wave amplitudes for l=0.1 are extracted. The p-wave amplitude is in fair agreement with the atomic data for the 2p state and exhibits some energy structure. It is shown that the real-to-imaginary ratio of the p-barp forward elastic-scattering amplitude becomes negative in an energy interval just near p-barp-threshold. 14 refs.; 3 figs.

48822 (JINR—D-4-85-851, pp 295-303) Nucleon-nucleon interaction and the quark model. Faessler, A. (Tuebingen Univ., Germany, F.R. Inst. fuer Theoretische Physik). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The NN phase shifts are calculated using the quark model with a QCD inspired quark-quark force. The short range part of the NN force is given by quark and gluon exchange. The long range part is described by π and σ-meson exchange. The data fitted in the model are five values connected with three quarks only: the nucleon mass, the Δ mass, the root mean square radius of the charge distribution of the proton including the pion cloud, the π-N and the σ-N coupling constant at zero momentum transfer. The /sub 1/S and /sub 3/S phase shifts are nicely reproduced. The short range repulsion is decisively influenced by the node in the [42]/sub r/ relative wave function. Very important is the colour magnetic quark-quark force which enlarges the [42]/sub r/ admixture. In the OBEP's the short range repulsion is connected with the exchange of the ω-meson. But to reproduce the short range repulsion one had to blow up the ω-N coupling constant by a factor 2 to 3 compared to flavour SU/sub 3/. With quark and gluon exchange the best fit to the ω-N coupling constant lies close to the SU/sub 3/ flavour value. This fact strongly supports the notion that the real nature of the short range repulsion of the NN interaction have been found. 17 refs.; 8 figs.

48823 (JINR-E—2-86-715) Correction to deep inelastic scattering cross section ratio R=σ/sub L//σ/sub T/ in QCD. Kazakov, D.I.; Kotikov, A.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703316.

Submitted to the journal Sov. J. Nucl. Phys.

The α/sub S/ correction to the longitudinal structure function of deep inelastic scattering is calculated within QCD. It is applied to the determination of R=σ/sub L//σ/sub T/ in the framework of scheme-invariant perturbation theory. The account of nonleading contribution improves the agreement with experimental data. 14 references, 2 figures.

48824 (KFTI—86-19) Electroproduction of neutral pions on deuterons. Rekalo, M.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1986. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703330.

For a process of electroproduction of neutral pions on deuterons $e^- + d \to e^- + \pi^0 + d$ the polarization phenomena are studied. It is estimated the general dependence on azimuthal angle phi electron scattering and κ-parameter of linear polarization of virtual photon in $\gamma^* + d \to d + \pi^0$ reaction (in of one-photon mechanism validity) for the electron angular distribution asumption symmetries due to vector and tenzor polarization of deuteron target. phi- and κ dependence of different contributions into vector polarization of final deuterons is estimated under the scattering of non-polarized and longitudinal polarized electrons on non-polarized target. The analysis is given in the terms of structure functions of the $e^- + d \to e^- + \pi^0 + d$ under the condition when in the final state two particles are registrated: electron and deuteron. The expressions for structure function are obtained in the terms of 13 scalar amplitudes of the $\gamma^* + d \to d + \pi^0$ process. The analysis of the polarized phenomena near threshold is rather simplified at near the threshold of $\gamma^* + d \to d + \pi^0$ process, its amplitude is defined only by three real threshold formfactors. 29 references.

48825 (LA-UR—87-2464, pp 4.1-4.24) Weak interaction matrix elements on the lattice. 1987. NTIS, PC A08/MF A01. File Number DE87013164. (CONF-8705129—2). Contract W-7405-ENG-36.

From Workshop on lattice gauge theory using parallel processors; Beijing, China (21 May 1987).

The pseudoscalar octet is the key to our understanding a significant fraction of modern particle physics. The light pion is a manifestation of a nearly exact chiral symmetry. The kaons are a periscope to the unknown world of CP violation. How well we can explain the large enhancement of $\Delta I = 1/2$ amplitude in K decays reflects our ability to calculate strong interaction corrections to any process involving low energy gluons. In all these phenomenon, the Achilles' heel is our inability to calculate the non-leptonic matrix elements at the hadronic scale. Once the machinery to calculate matrix elements (ME) on the lattice is established, the list of problems one can address is large. As an example, only the $\Delta I = 1/2$ rule and ϵ'/ϵ is discussed in this paper.

From 18. summer school on particle physics; Gif-sur-Yvette, France (8 Sep 1986).

The decays of the J/PSI have an important part in the experimental research of glueballs. This report presents the results of several experiments after a theoretical approach about glueballs.

48827 **(LBL—23645) Excited quark production at hadron colliders.** Baur, U.; Hinchliffe, I.; Zeppenfeld, D. (Fermi National Accelerator Lab., Batavia, IL (USA); Lawrence Berkeley Lab., CA (USA); Wisconsin Univ., Madison (USA). Dept. of Physics). Jun 1987. Contract AC03-76SF00098. 9p. (CONF-8705163—7). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000211.

From From colliders to supercolliders workshop; Madison, WI, USA (11 May 1987).

Composite models generally predict the existence of excited quark and lepton states. We consider the production and experimental signatures of excited quarks Q* of spin and isospin 1/2 at hadron colliders and estimate the background for those channels which are most promising for Q* identification. Multi-TeV pp-colliders will give access to such particles with masses up to several TeV.

48828 **(OUP—87-15) On the s->d self energy transition —α/sub s/ G/sub F/ and the relevance for the ΔI=1/2 and ε'/ε puzzles.** Eeg, J.O. (Oslo Univ. (Norway). Fysisk Inst.). May 1987. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752525.

The s->d self energy transitions diagrams —α/sub s/G/sub F/ or /sup s/elf-penguins/sup ,/ recently proposed by Shabalin as the explanation of the $\Delta I=1/2$ rule for $K->\pi\pi$ decays, have been considered. The effect of such self-energy transition on physical amplitudes is considered in terms of a chiral quark loop model for $K->\pi$. A self-penguin contribution proportional to the dot product of the pion and kaon four momenta is found. However, this contribution can at most account for 5% of the observed $\Delta I=1/2$ amplitude. The self-penguin contribution to the CP-violating quantity ϵ'/ϵ calculated within the same framework could be as big as half of the standard penguin contribution. 20 refs.

48829 **(SLAC-PUB—4334) Searching for 4th generation fermions at high-energy e^+e^- machines.** Dorfan, J.; Van Kooten, R.J. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). May 1987. Contract AC03-76SF00515. 10p. (CONF-870278—6). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014311.

From 4. family of quarks and leptons international symposium; Santa Monica, CA, USA (26 Feb 1987).

This writeup summarizes Monte Carlo studies on the feasibility of searching for 4th family fermions at high energy e^+e^- machines. By high energy it is meant at energies beyond the Z^0; the Z^0 searches having been studied extensively by the SLC and LEP collaborations. The specific examples of $\sqrt{s} = 200$ GeV (namely LEP200) and $\sqrt{s} = 600$ GeV (in line with work being done at SLAC to investigate the potential of a future linear collider) were chosen. The studies have been performed with the four vectors produced by the models and no attempt has been made to account for the effects of finite resolution and inefficiencies due to a real detector environment.

48830 **(SLAC-PUB—4361) J/psi and Y radiative and hadronic decays.** Bloom, E.D. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jul 1987. Contract AC03-76SF00515. 20p. (CONF-870334—3). NTIS, PC A02. File Number DE87014313.

From Workshop on results and perspectives in particle physics; La Thuile, Italy (1 Mar 1987).

The search for gluonium at the J/psi and Y is discussed, as well as the search for exotics at the Y. Reactions discussed include radiative and hadronic decays of the J/psi and the search for radiative decays of the Y. Future perspectives are also briefly considered. 45 refs., 27 figs. (LEW)

48831 **B decays without final-state charm particles and CP noninvariance.** Chau, L.; Cheng, H. (Physics Department, University of California at Davis, Davis, California 95616). *Physical Review Letters;* **59**: No. 9, 958-961(31 Aug 1987).

Branching ratios and CP noninvariance of nonleptonic rare exclusive B decays without charm particles in the final state are studied. Decay channels, such as B/sub d/^{0}→K^{0}phi,K/sup */^{0}phi, B/sub s/^{0}→K-bar^{0}phi,K-bar/sup */^{0}phi, B/sub d//sub ,//sub s/→phiphi,K^{0}K-bar^0,K/sup */^{0} K-bar^0,K^{0}K-bar/sup */^{0},K/sup */^{0}K-bar/sup */^{0}, etc., that can give direct evidence for the W-loop diagrams are pointed out. Some decay modes have large (tens of percent) CP noninvariance of partial-decay-rate differences. Decays such as B/sub u/$^+$→K$^+$ rho^0, $K^+\pi^+\pi^-$,K$^+$ phi,K$^+$K$^+$K$^-$ might be of special interest because of the simplicity in the origin of their CP noninvariance and in their experimental detectability.

48832 **ε'/ε from the lattice.** Sharpe, S.R.; Gupta, R.; Guralnik, G.; Patel, A.; Kilcup, G.W. (Stanford Linear Accelerator Center, CA, USA; Los Alamos National Lab., LANL, NM, USA. Theoretical Div.; Brown Univ., Providence, RI, USA. Dept. of Physics; Cornell Univ., Ithaca, NY, USA. Newman Lab. of Physics). *Physics Letters* [*Section*] *B;* **192**: No. 1/2, 149-155(25 Jun 1987). Contract AC03-76SF00515;AC02-76ER03130.

Results from a lattice calculation of the matrix elements of the weak hamiltonian which determine ϵ' are presented. They suggest a smaller value of ϵ'/ϵ than previously estimated.

48833 **(p, n) reaction and the nucleon-nucleon force.** Bertsch, G.F.; Esbensen, H. (Michigan State Univ., East Lansing, USA. Cyclotron Lab.; Michigan State Univ., East Lansing, USA. Dept. of Physics and Astronomy; Argonne National Lab., IL, USA). *Reports on Progress in Physics;* **50**: No. 6, 607-654(Jun 1987).

The (p, n) charge exchange reaction is a powerful tool of nuclear structure physics, with spectroscopic characteristics that are closely related to the free interaction between nucleons. At proton energies in the range of 150-500 MeV, the interaction probes the spin dynamics in the charge exchange process and is particularly sensitive to nuclear pionic fields. At low energies, say less than 50 MeV bombarding energy, the reaction also probes the isovector density. An outstanding success of the reaction as a structural probe is the elucidation of the Gamow-Teller strength function in the nuclear excitation spectrum. However, the total strength found falls short of sum rule predictions by about 40%. Explanations of this quenching have been advanced along two lines, based on subnuclear degrees of freedom or on configuration mixing into high continuum states. Detailed theoretical arguments support the importance of configuration mixing. The subnuclear degrees of freedom may be comparable, but a decisive test is lacking.

48834 **Neutrino mass and the solar neutrino problem.** Wolfenstein, L. (Carnegie-Mellon Univ., Physics Dept., Pittsburgh, PA 15213). pp 893-896 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Theoretical ideas about neutrino mass based on grand-unified theories are reviewed. These give the see-saw formula in which

neutrino mass is inversely proportional to a large mass scale M. For M between 10/sup 11/ and 10/sup 15/ Gev the study of solar neutrinos appears to be the best probe of neutrino masses and mixings.

48835 **Polarization effects in hadron structure functions and in quark and gluon fragmentation.** Einhorn, M.B. (Randall Laboratory of Physics, University of Michigan, Ann Arbor, Michigan 48109-1120). *AIP (American Institute of Physics) Conference Proceedings;* **145**: No. 1, 149-153(20 Jul 1986). (CONF-8504161—).

From Workshop on polarized antiproton sources; Bodega Bay, CA, USA (18 Apr 1985).

The predictions of QCD for the evolution of the quark and gluon structure functions of a polarized proton are discussed. In fact, the parton polarizations increase with energy, for fixed Feynman x. Thus, polarized protons may be useful for the discovery or investigation of new physical phenomena at very high energy, especially if there are new interactions or particles whose behavior violates one of the natural symmetries of QCD, such as parity. The mean gluon asymmetry grows as l-scriptnQ², which implies that the orbital angular momentum of the gluons grows similarly.

48836 **Better potential for quarks.** Heller, L. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 72-82(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

It is argued on theoretical and phenomenological grounds that confinement of quarks is intrinsically a many-body interaction. The Born-Oppenheimer approximation to the bag model is shown to give rise to a static potential energy that consists of a sum of two-body Coulomb terms and a many-body confining term. Following the success of this potential in heavy QQ-bar systems it is being applied to Q²Q-bar². Preliminary calculations suggest that a dimeson bound state may exist.

48837 **Charge form factors and quark clusters.** Vary, J.P.; Coon, S.A.; Pirner, H.J. (Iowa State University, Ames, IA 50011). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 83-95(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

We present a model for nuclear charge form factors based on the quark cluster model. Different approximation schemes are presented and compared with each other and with the conventional nuclear physics approach in the important three nucleon system. One basic result stands out: the presence of six-quark clusters in the A = 3 system brings the calculated charge form factor much closer to agreement with experiment. The physical origins of the effects due to higher clusters are presented.

The exceptional Lie algebras E/sub 6/ and E/sub 8/ are realized in terms of the covariant operators transformed as scalars, spinors, vectors and an antisymmetric tensor under the subalgebra SO(10). All commutation relations are given explicity. 3 refs.

48840 **(INS—589) Symmetry breakings in supersymmetric quantum chromodynamics with N/sub color/ < N/sub flavor/.** Yasue, Masaki. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jun 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702916.

In supersymmetric quantum chromodynamics (SQCD) with N/sub color/(=N) < N/sub flavor/(=M), influences of explicit supersymmetry (SUSY)- and chiral symmetry-breakings are examined on the basis of an effective lagrangian for SQCD. The effective lagrangian reproduces symmetry-breakings consistent with complementarity in the massless SQCD and with instanton-analysis in the massive SQCD for M-N massive flavors. A chiral SU(M-N) symmetry, which remains unbroken in the massless SQCD, is broken by the SUSY- breakings even in the absence of the explicit breakings of SU(M-N). Comments are made on SQCD viewed as an underlying dynamics for composite quarks and leptons.

48841 **(RRK—86-6) Some peculiar space-times with spherical symmetry.** Nariai, H. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Feb 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703347.

As an extension of earlier papers (1950 - 1) on a peculiar solution of the vacuum Einstein equations with the cosmological constant, i.e., R/sub $\mu\nu$/ = Λg/sub $\mu\nu$/, the authors reproduce the content of a research note (dated on October 6th, 1960) on some peculiar space-times with spherical symmetry, because it includes not only the Kantowski and Sach's solution of Einstein's equations for a dust fluid without Λ, but also the one for a dust fluid with Λnot =0, in addition to the case where R/sub $\mu\nu$/ = Λg/sub $\mu\nu$/ (in similar to Nariai's solution).

48842 **Charge neutrality of atoms and magnetic monopoles.** Chu, S. (Department of Physics and Energy Sciences Program, University of California, Riverside, California 92521). *Physical Review Letters;* **59**: No. 13, 1390-1393(28 Sep 1987).

Under the assumption that charge conservation and charge quan- tization are exact, it is pointed out that the expectation values f the charges can still deviate from the exact quantized eigenvalues, as long as the charge superselection rule is not absolute. The deviations can be suppressed by a large energy scale, identified as the mass of the magnetic monopole. Existing experimental results are consistent with ΔQ/sub p/+ΔQ/sub e/≅3 x 10/sup -20/e and ΔQ/sub n/≅-3 x 10/sup -20/e, where ΔQ/sub i/ is the deviation for particle i. Implications, in particular ΔQ/sub ν//sub >//sub e//sub =/≅6 x 10/sup -20/e, are discussed.

48843 **Gaugino masses in superstring inspired models.** Dawson, S. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 319-321 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00098.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Contributions to the masses of the gauginos in models arising as low energy limits of superstring theories are considered.

48844 **(DOE/ER/40200—102) Inequivalent quantizations and fundamentally perfect spaces.** Imbo, T.D.; Sudarshan, E.C.G. (Texas Univ., Austin (USA). Center for Particle Theory). Jun 1987. Contract FG05-85ER40200. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014225.

We investigate the problem of inequivalent quantizations of a physical system with multiply connected configuration space X. For scalar quantum theory on X we show that state vectors must be single-valued if and only if the first homology group $H_1(X)$ is trivial, or equivalently the fundamental group $\pi_1(X)$ is perfect. The θ-structure of quantum gauge and gravitational theories is discussed in light of this result.

48845 **(DOE/ER/40272—34) Supersprings.** Curtright, T.L.; van Nieuwenhuizen, P. (State Univ. of New York, Stony Brook (USA). Inst. for Theoretical Physics). 1987. Contract FG05-86ER40272. 21p. (UFTP—87-6; ITP-SB—87-20; YTP—87-13). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014589.

As a covariant model of superstrings with extrinsic curvature terms, this paper proposes and analyses a Lagrangian which is quadratic in the Green-Schwarz equations of motion. Also discussed is the geometry of the superstring world-sheet from an extrinsic point of view.

48846 **(DOE/ER/40272—40) Coset representation of closed loop space in string field theory.** Oh, P. (Florida Univ., Gainesville (USA). Dept. of Physics). 1987. Contract FG05-86ER40272. 8p. (UFTP—87-12). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014592.

By taking analogy with Minkowski space, a construction of a closed loop space CM is made which is an infinite-dimensional coset space. Also included is some of its consequences.

48847 (INIS-SU—418, pp 54-57) **Radiative corrections and supersymmetry in stochastically quantized non-Abelian field theory.** Maliev, I.N. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780180.

Kratkie Soobshcheniya po Fizike.; (no.11).

In Plasma physics. Collection.

Account of radiative corrections in the limit of the gauge parameter tending to zero, results in violation of supersymmetry group and emergence of a divergent linear member in a two-point non-equilibrium Green function of non-Abelian gauge field. 7 refs.; 1 fig.

48848 **(INS—567) Screening effect in relativistic QED plasma.** Midorikawa, Shoichi; Yamaguchi, Yoshio. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Feb 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702912.

The screening phenomena are studied in the plasma of the relativistic quantum electrodynamics. Shielding lengths of both electric and magnetic fields are given as functions of the temperature and the chemical potential. Applications to heavy ion collisions are briefly discussed.

48849 **(INS—580) Renormalization group approach to QCD phase transitions.** Midorikawa, Shoichi; So, Hiroto; Yoshimoto, Seiji. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Apr 1986. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87702914.

Effective scalar theories for QCD are proposed to investigate the deconfining and chiral phase transitions. The orders of the phase transitions are determined by infrared stabilities of the fixed points. It is found that the transitions in SU(3) gauge theories are of 1st order for any number of massless flavors. The cases of SU(2) and SU(4) gauge theories are also discussed.

48850 **(ITEP—102-1986) Analytical anomaly and heterotic string in the formalism on continual integration.** Morozov, A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702946.

It is shown that P-loop statistical sums for superstring and for heterotic string may be represented as integrals over the space of moduli of Riemann surfaces. There is a similar relation between the sum of analytical functions and statistical sum, arising from continual integral, based on the supersymmetrized action of bosonic string. This relation may provide an argument against compactification on 6-dimensional tori. 9 refs.

48851 **(ITEP—116-1986) Description of a class of superstring compactifications related to semi-simple Lie algebras.** Markushevich, D.I.; Ol'shanetskij, M.A.; Perelomov, A.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703309.

A class of vacuum configurations in the superstring theory obtained by compactification of physical dimensions from ten to four is constructed. The compactification scheme involves taking quotients of tori of semisimple Lie algebras by finite symmetry group actions. The complete list of such configurations arising from actions by a Coxeter transformation is given. Some topological invariants having physical interpretations are calculated. 14 refs.; 5 figs.

48852 **(JINR-R—2-86-349) Modelling of spin-dependent quark-antiquark bound states in quasipotential approach.** Aleksandrov, L.; Karadzhov, D.; Morozov, P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703320.

The direct problem for description of spin-dependent quark-antiquark bound states is formulated in the Logunov-Tavkhelidze-Todorov quasipotential approach. A complete set of equations corresponding to all possible values of the total spin S and total momentum J is given. The regularized quasipotentials nonsingular in the vicinity of zero are constructed from the two model generating potentials: the Richardson potential and the conventional (including Coulomb and linear terms) potential. Asymptotic solutions (as $r \to 0$ and $r \to \infty$) of the total system are obtained. The numerical solution of the spin-system for charmonium and bottomium are found by the core splines method. Numerical results for the conventional model exhibit a quantitatively correct spin-splitting of quarkonium states. The spin-equation in the case S=1, J=0 gives ground-state energies w(cc-bar)=2.752 GeV, w(bb-bar)=8.991 GeV which are quite lower as compared with up-to-date experimental energies of 1^3P_0-states. 13 references, 3 tables.

48853 **(JINR-R—4-86-514) About energy degeneracy of some nucleon excited states in the Skyrme model.** Nikolaev, V.A.; Roka, Eh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703325.

The masses of nucleon excited states are calculated in the framework of SU(2) Skyrme model. Rotational and monopole vibrational degrees of freedom are taken into account. It is shown that the states..n+1,j> and ...n,j+1>, where n numbers states with a given spin ...j have practically the same energy. Such a degeneracy is observed experimentally only for the high excited states. 5 references, 1 table.

48854 **(LA-UR—87-2464) Food for thought: Five lectures on lattice gauge theory.** Gupta, R. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 169p. (CONF-8705129—2). NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87013164.

From Workshop on lattice gauge theory using parallel processors; Beijing, China (21 May 1987).

The topics covered in these lectures are the heavy anti qq potential, glueballs, the chiral transition with dynamical fermions, Weak interaction matrix elements on the lattice and Monte Carlo renormalization group. Even though for the most part these lectures are reviews, many new results and ideas are also presented. The emphasis is on critical analysis of existing data, exposing bottlenecks and a discussion of open problems. Five individual papers have been indexed separately.

48855 (LA-UR—87-2464, pp 1.1-1.28) **The heavy q anti q potential.** 1987. NTIS, PC A08/MF A01. File Number DE87013164. (CONF-8705129—2). Contract W-7405-ENG-36.

From Workshop on lattice gauge theory using parallel processors; Beijing, China (21 May 1987).

The very attempt to construct a potential to describe the interaction of quarks restricts the focus to heavy fermions. It is only when the mass m is large that one can formulate the bound state of a q anti q system as a non-relativistic problem, with binding energies calculable from a potential via the Schroedinger equation. There exist two systems, charmonium and bottomonium that are made up of heavy quarks. The goal of this paper is to derive a potential, check it against these levels, and then with it predict the anticipated toponium spectra.

48856 (LA-UR—87-2464, pp 2.1-2.23) **Glueballs.** 1987. NTIS, PC A08/MF A01. File Number DE87013164. (CONF-8705129—2). Contract W-7405-ENG-36.

From Workshop on lattice gauge theory using parallel processors; Beijing, China (21 May 1987).

The existence of glueballs are a major untested prediction of QCD. We have not been able to reliably calculate the masses (let alone the mixing with q anti q states), or understand in detail the production and decay mechanisms. What we can do is group theory and determine, if QCD is the correct theory, the quantum numbers of the vast number of glueball states. This paper investigates: The experimental status of the existence of glueballs, the lattice calculations of the glueball spectrum, sources for glueballs, better operators to describe phenomenon and the existence of 2^{++} states.

48857 (LA-UR—87-2464, pp 3.1-3.32) **QCD with dynamical fermions: The chiral transition.** 1987. NTIS, PC A08/MF A01. File Number DE87013164. (CONF-8705129—2). Contract W-7405-ENG-36.

From Workshop on lattice gauge theory using parallel processors; Beijing, China (21 May 1987).

Efficient algorithms to include dynamical fermions in numerical simulations are very important in Condensed Matter Physics, Statistical Mechanics and Lattice Gauge theories. In the last four years, considerable effort has been devoted to algorithm development. Discussed in this paper are some aspects of the exact algorithm. By and large, this paper concentrates on the status of the results for the chiral transition.

48858 (LA-UR—87-2464, pp 5.1-5.59) **Monte Carlo renormalization group.** 1987. NTIS, PC A08/MF A01. File Number DE87013164. (CONF-8705129—2). Contract W-7405-ENG-36.

From Workshop on lattice gauge theory using parallel processors; Beijing, China (21 May 1987).

This paper explores the use of the Monte Carlo renormalization group method or field and gauge theories. The topics covered are: Introduction to MCRG and its methodology, Renormalization Group Transformations for d = 4 lattice gauge theories, U(1) Lattice Gauge Theory, β-function and scaling for SU(3) Lattice Gauge Theory, Improved Actions and Methods to calculate them, Improved Monte Carlo Renormalization Group, Renormalization Group inspired Multigrid update, Measuring auto-correlations with block operators, and Effective Field Theories.

48859 (OUP—87-02) **Θ-dependent energy of a particle on a circle.** Fjeldsoe, N.; Ravndal, F. (Oslo Univ. (Norway). Fysisk Inst.). Jan 1987. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752512.

A quantum particle on a circle behaves as a random walker in imaginary time. This can be used to get an exact result for its ground state energy due to the non-trivial topology of the circle.

48860 (SLAC—313) **Restrictions on two Higgs doublet models and CP violation at the unification scale.** Athanasiu, G.G. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Apr 1987. Contract AC03-76SF00515. 41p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014696.

Bounds on charged Higgs masses and couplings in models with two Higgs doublets are examined that came from CP violation in the neutral K system. Bounds on charged Higgs masses and couplings in two Higgs doublet models are also obtained from their effects on neutral-B-meson mixing. The bounds are found to be comparable to those obtained with additional assumptions from the neutral K system. The three generation phase invariant measure of CP violation is shown to satisfy a simple and solvable renormalization group equation. Its value is seen to fall by four to eight orders of magnitude between the weak and grand unification scales in the standard model, as well as in its two Higgs and supersymmetric extensions. (LEW)

48861 (SLAC-PUB—4324) **Phenomenological implications of the blown-up orbifolds.** Cvetic, M. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). May 1987. Contract AC03-76SF00515. 14p. (CONF-8704204—1). NTIS, PC A02. File Number DE87014608.

From 8. workshop on grand unifications; Syracuse, NY, USA (16 Apr 1987).

We discuss the structure of the effective Lagrangian for the (2,2) Z/sub N/ orbifolds and the corresponding Calabi-Yau manifolds which are obtained by "blowing-up" the orbifold singularities. The method to "blow-up" such singularities is reviewed. Results are exact at the string tree-level. In particular, the question of generating an intermediate scale M/sub I/ in such models is addressed. It is shown that for Z/sub N/ orbifolds (except one) and the corresponding blown-up orbifolds which are compactified on any six-torus T^6 which can be obtained by continuously deforming T^4 circle times T^2, all the terms of the type (2727)/sup K/ are absent from the effective superpotential, thus questioning the mechanism for generating a large intermediate scale for such compactifications.

48862 **Properties of the scalar σ meson at finite density.** Bernard, V.; Meissner, U.; Zahed, I. (Centre de Recherches Nucleaires et Universite Louis Pasteur de Strasbourg, Groupe de Physique Nucleaire Theorique, Bote Postale 20, 67037 Strasbourg Cedex, France). *Physical Review Letters;* **59**: No. 9, 966-969(31 Aug 1987).

The behavior of the scalar σ meson at high density is discussed in the context of the Nambu—Jona-Lasinio model. The decrease of the σ-meson mass with increasing density suggests a softening of the equation of state at high density in most of the relativistic mean-field calculations.

48863 **Effective potential and supersymmetry breaking in superstring models.** Binetruy, P.; Dawson, S.; Hinchliffe, I.; Gaillard, M.K. (California Univ., Berkeley, USA. Dept. of Physics; Lawrence Berkeley Lab., CA, USA). *Physics Letters [Section] B;* **192**: No. 3/4, 377-384(2 Jul 1987). Contract AC03-76SF00098;AC02-76CH00016.

We study radiative corrections to an N=1 supergravity model suggested by a particular compactification of superstring theories, including non-perturbative supersymmetry breaking effects. We argue that there is a range of parameters such that the one-loop effective potential has a global minimum for finite values of the scalar fields that determine the gravitino mass. When the potential is minimized with respect to all relevant expectation values, the cosmological constant necessarily vanishes and no soft supersymmetry breaking terms are generated in the gauge non-singlet scalar potential. We also discuss the determination of the gaugino masses at one loop.

48864 **Fixed point structure of quenched, planar quantum electrodynamics.** Love, S.T. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 584-587 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515;FG05-86ER40299.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Gauge theories exhibiting a hierarchy of fermion mass scales may contain a pseudo-Nambu-Goldstone boson of spontaneously broken scale invariance. The relation between scale and chiral symmetry breaking is studied analytically in quenched, planar quantum electrodynamics in four dimensions. The model possesses a novel nonperturbative ultraviolet fixed point governing its strong coupling phase which requires the mixing of four fermion operators.

48865 **(DOE/ER/01067—26) Triangle Universities Nuclear Laboratory: Annual report, TUNL XXVI, 1 September 1986-31 August 1987.** (Duke Univ., Durham, NC (USA); North Carolina Univ., Chapel Hill (USA); North Carolina State Univ., Raleigh (USA)). 1987. Contract AS05-76ER03624;AS05-76ER02408;AC05-76ER01067. 183p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE88000262.

At TUNL particular emphasis is placed on reactions induced by polarized protons, deuterons, and neutrons. Research programs include: studies of spin-spin forces with a polarized target and tests of time reversal invariance, high resolution proton scattering on the tandem, examination of the nucleon-nucleus interactions in light nuclei, charged particle induced reactions with polarized projectiles, radiative capture reactions with polarized beams, and weak interaction studies. We also continue a major commitment to the study of the statistical properties of nuclear levels revealed by elastic and inelastic scattering experiments using ultra high energy-resolution proton beams.

48866 **(DOE/ER/40256—2) Cyclotron based nuclear science: Progress report, April 1, 1986-March 31, 1987.** (Texas A and M Univ., College Station (USA)). Aug 1987. Contract FG05-86ER40256. 142p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87014581.

This report contains descriptions of research programs at the Institute, progress on construction of the K500 cyclotron, and descriptions of new experimental devices being built to take advantage of new beams that will be available. Several milestones were reached in construction of the new cyclotron during the period. In early summer, 1986, the magnet was completed with all trim coils and shimming iron in place. During July and August, the final field maps were made, which will be used for calculations of run parameters. In the spring, one rf amplifier was completed and tested over the full frequency and power range. Also in the spring, the computer control system successfully operated positioning controls and trim coil power supplies. Final assembly of the rf system including the dees, resonators and other 2 rf amplifiers is now underway. Initial attempts at getting beam are expected in September. The design of the ECR source was completed in the fall. A beam line configuration has been designed for the K500 cyclotron which will result initially in 3 lines, with a fourth to be added in 1988. With the eminent completion of the K500, there has been considerable instrumentation development. A 4π neutron calorimeter is under construction for heavy ion reaction studies, construction is beginning on a proton spectrometer for studies of Gamow-Teller matrix elements with the (d,^{2}He) reaction, and several detector systems are being developed. During the year, the 88 inch cyclotron operated 4845 hours for research and beam development. Research programs in nuclear science scheduled 57% of the time. Atomic physics programs used 19% of the time, and a program in trace analysis scheduled 6%. An industrial testing laboratory used 18 hours. The remainder of the time was used for beam development, primarily for increasing the energy and/or intensity of heavy ion beams.

48867 **(DOE/ER/40261—2) Electron interactions with nuclei: Progress report.** McCarthy, J.S. (Virginia Univ., Charlottesville (USA). Dept. of Physics). Aug 1987. Contract FG05-86ER40261. 82p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87014587.

High energy is being conducted at the Stanford Linear Accelerator Center. This includes inclusive electron scattering, electroexcitation of the delta in nuclei, longitudinal and transverse response in the quasi-elastic region, the q^2 dependence of ^{4}He(e,e'p), deep inelastic scattering from nuclei, transverse and longitudinal response in the resonance region, nuclear physics at PEP and 1.6 GeV spectrometer properties. Additional high energy research on electron scattering on ^{3}H and ^{3}He and the nuclear structure of ^{205}Tl and ^{206}Pb are being conducted at MIT-Bates. Other activities are being carried out at Saclay and research and development for Monte Carlo studies of Hall A spectrometers for CEBAF is being conducted.

48868 **(EFI—822(49)-85) Investigation of electrons with / sup 6/Li, /sup 9/Be, /sup 12/C, /sup 28/Si nuclei in the region of quasi-elastic peak and δ/sub 33/-resonace.** Bagdasaryan, D.S.; Boyakhchyan, E.M.; Kazaryan, G.B.; Karilyan, M.D.; Markaryan, Eh.R.; Mkrtchyan, G.G.; Troshenkova, I.A. (Erevanskij Fizicheskij Inst. (USSR)). 1985. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702884.

The cross sections (e,e') for the reactions on /sup 6/Li, /sup 9/Be, /sup 2/C and /sup 28/Si nuclei are measured in the region of quasi-elastic peak and Δ/sub 33/-resonance at 1.5 and 2.0 GeV energies. Electrons scattered at angles 15.5 deg were analysed with a magnetic spectrometer. The apparatus calibration was carried out according to the process of elastic electron scattering on polyethylene hydrogen. The background was taken into account under measurements without target and at the spectrometer reversed polarity. The experimental results are in good agreement with calculations by means of shell model involving the dispersion relations for determination of nucleon cross sections in the Δ/sub 33/-resonance region. Excess of the experiment over the theory is observed at the pion production threshold.

48869 (INIS-SU—416, pp 5-12) **Momentum spectra of pions and protons in p, /sup 12/C and /sup 22/Ne collisions with emulsion nuclei at 4.5 GeV/c.** Leskin, V.A.; Tolstov, K.D. (AN Tadzhikskoj SSR, Dushanbe. Fiziko-Tekhnicheskij Inst.; Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of High Energy). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780179. (N—17-86).

In JINR rapid communications. Collection.

In inelastic p, /sup 12/C and /sup 22/Ne collisions with emulsion nuclei at 4.5 GeV/c per nucleon the shower particles are separated into π/sup +-/-mesons and protons that have undergone inelastic interaction. In the case of /sup 12/C and /sup 22/Ne nuclei, the p, d and t projectile fragments conserving their energy are also separated. The ratios for the yields of these particles and the momentum, emission angle and rapidity distributions of π/sup +-/ and protons have been obtained. The average momenta of π-mesons for all projectiles are close to their values in nucleon-nucleon collisions. A weak dependence of the momenta and rapidities of mesons and interacting protons on the number of nucleons on their way in the target nucleus is shown. 7 refs.; 5 figs.; 4 tabs.

48870 (INIS-SU—416, pp 13-18) **Measurement of /sup 19/F nucleus interaction at 4 GeV/c per nucleon.** Golovin, V.M.; Golutvin, I.A.; Dolya, S.N. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780179. (N—17-86).

In JINR rapid communications. Collection.

The cross sections of /sup 19/F nucleus interaction with the nuclei of different elements at 4 GeV/c x nucleon momentum in reactions are measured. In the finite state of these reactions the fragment with charge $Z \leqq 8$ is formed. The experiment apparatus comprises a transmission detector where the nuclei trajectory at the target input has been measured with proportional chambers whereas the nuclear charge before and after the target has been measured by Cherenkov counters. Experimental data obtained with accuracy - 2% are presented for carbon, aluminium, copper, indium, tungsten, bismuth and uranium targets. The dependence of cross sections on atomic number of the target coincides except of cross section of interaction with heavy targets. 14 refs.; 4 figs.; 1 tab.

48871 **(INS—606) Three-body coupled-channel theory of scattering and breakup of light and heavy ions.** Kamimura, M.; Kameyama, H.; Kawai, M.; Sakuragi, Y.; Iseri, Y.; Yahiro, M.; Tanifuji, M. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Sep 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702929.

It is shown that the method of coupled discretized continuum channels (CDCC) based on the three-body model for direct reactions is very successful in explaining the following, recently developed experiments using deuteron, /sup 6/Li and /sup 7/Li projectiles whose breakup threshold energies are very low: (i) Precise measurement of all the possible analyzing powers in elastic scattering of polarized deuteron at 56 MeV, (ii) scattering of polarized deuteron at intermediate energies, (iii) deuteron projectile breakup at 56 MeV, (iv) scattering of polarized /sup 7/Li at 20 and 44 MeV and (v) projectile breakup of /sup 6/Li at 178 MeV and /sup 7/Li at 70 MeV. The CDCC analyses of those data are made transparently with no adjustable parameters.

48872 **(ITEF—165-1986) Production of deuterons and tritium nuclei with the 0.6-1.83 GeV/c momenta on Be, Al, Cu, Ta nuclei at the 119 deg angle by 10 GeV protons.** Boyarinov, S.V.; Gerzon, S.A.; Kiselev, Yu.T.; Leksin, G.A.; Martem'yanov, A.N.; Novikov, V.L.; Semenov, S.V.; Terekhov, Yu.V.; Shejnkman, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703299.

Invariant production cross sections of cumulative deuterons and tritium nuclei on Be, Al, Cu, Ta nuclei in the previously unstudied momentum range from 0.6 to 1.83 GeV/c are measured. It is shown that the invariant production cross sections of deuterons and tritium nuclei on heavy nuclei are well described by the fusion model. The contribution of another mechanism, possibly pick-up, is noticeable for deuteron production cross section with < 0.6 GeV/ cxnucleon momentum on Be nuclei. 15 refs.; 11 figs.

48873 (JINR—D-4-85-851, pp 51-82) **Experimental investigation of single-particle modes at high excitation energy.** Gales, S. (Paris-11 Univ., 91 - Orsay, France. Inst. de Physique Nucleaire). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Review of present knowledge of the so-called giant single-particle (or single-hole) resonances is given. These giant resonances are the response of a nucleus to an external field acting on its single-particle degrees of freedom. With the help of transfer reactions investigated at high incident energies, empirical knowledge of the single-particle response function has been greatly enhanced. Inner-neutron hole strengths have been observed in a variety of one nucleon pick-up reactions for a wide range of medium and heavy nuclei. New spectroscopic tools like the use of polarized beams or the investigation of (p, pn) reactions, have or will proved their validity. More decisive progress is expected in the near future by the development of the decay studies. Strength functions of high-lying states could be directly deduced from exclusive experiments without any assumption on the underlying background or on the reaction mechanism. From the theoretical side, the correct description of the form factor of deeply-bound or high-lying particle states are highly desirable whereas in the framework of the reaction theory, the explanation of the underlying background is still to come. Both the quasiparticle-phonon nuclear model and the selt-consistent approaches have reached a good qualitative agreement with the empirical systematics. Moreover the link between single-particle and collective degrees of freedom in the nucleus has been established in order to explain the damping of high-lying single-particle strengths. 59 refs.; 39 figs.

48875 **(PB—87-201794/XAB) Model for the nuclear effects of the d-t-muon fusing state.** Danos, M.; Biedenharn, L.C.; Stahlhofen, A.A. (National Bureau of Standards, Washington, DC (USA)). Apr 1987. 26p. (NBSIR—87/3532). NTIS, PC A03/MF A01.

A simple model is constructed which is used to illustrate the interplay between the strong nuclear forces and the Coulomb molecular forces in the description of the resonant d-t-muon fusion process.

48876 **Measurement of the A dependence of the EMC effect and R in deep-inelastic electron scattering from nuclei.** Rock, S.E. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 166-172(15 Sep 1985). (CONF-8503120—). Contract AC03-76SF00515.

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

Measurement of the A dependence of deep inelastic electron scattering have been made for a wide range of x and Q^2 values. The ratio R = σ/sub L//σ/sub T/ is found to depend on A. Implications for the structure functions are discussed.

48877 **Electromagnetic meson production.** Bernstein, A.M. (Physics Department and Laboratory for Nuclear Science, Massachusetts Institute of Technology, Cambridge, MA 02139). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 271-295(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

Electro- and photo-production of pions and Kaons are compared. The similarities and differences in the production mechanisms are discussed, including the special role of the delta in pion production. The topics that are discussed include; 1) inclusive experiments in the delta region with photons and electrons. The results have been surprising in that the cross section per nucleon is constant for all nuclei that have been studied starting with ^{4}He; 2) A test of the reaction mechanism for photo-pion production. New high quality data obtained primarily at Bates which will strongly test theoretical models are presented; 3) The prospects for electromagnetic production of K^+ mesons forming bound hyper-nuclear states is presented. These studies which will depend on a high intensity, high duty cycle, electron accelerator of over 3 GeV should produce data which is complimentary to a Kaon factory.

From 6. Adriatic international conference on nuclear physics; Dubrovnik, Yugoslavia (15 Jun 1987).

QCD lattice calculations predict that, at sufficiently high energy densities, hadronic matter undergoes a transition to a new phase of matter, the quark-gluon plasma, in which quarks and gluons are deconfined over a relatively large volume. It has been suggested that collisions between heavy nuclei at ultrarelativistic

energies may produce the energy densities, estimated to be greater than 2 to 3 GeV/fm^3, necessary for this phase transition to occur. An important goal of the first experiments with ultrarelativistic heavy-ion beams at the SPS accelerator at CERN is to investigate the extent to which this suggestion is correct. The primary experimental quantity used for estimating the energy density is the transverse energy, E/sub T/. We present here energies measured at zero degrees, together with transverse energy measurements. Estimates of attained energy densities and preliminary transverse momentum distributions of neutral products are also presented. 24 refs., 7 figs.

48879 (INIS-SU—416, pp 36-40) **On the study of the / sup 7/Be(n,p)/sup 7/Li reaction in the neutron energy range from 0.025 to 500 eV.** Gledenov, Yu.M.; Zvarova, T.S.; Mitrikov, M.P.; Mitrikova, R.S.; Popov, Yu.P.; Salatskij, V.I.; Fung Van Duan. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780179. (N—17-86).

In JINR rapid communications. Collection.

The first measurement of the energy dependence of the /sup 7/Be(n, p)/sup 7/Li reaction cross section has been carried out using a non-standard procedure of identification of low energy charged particles with the ionization chamber with two grids. As a result there were obtained the thermal cross section and the energy dependence of investigated reaction cross section in the neutron energy range up to 0.5 keV. It was shown that at neutron energies below 140 eV the cross section followed the 1/v law, where v was the neutron velocity. Two independent series of measurements have revealed a deviation from the 1/v law in the region E/sub n/ — 140-200 eV which might have probably been ascribed to the presence of a narrow resonance on neutrons with orbital momenta different from zero. The question about the resonance responsible for the large (5 x 10/sup 4/ b) thermal cross section remains still open. 12 refs.; 2 figs.

48880 (INS—596) **Scattering of polarized /sup 7/Li by / sup 120/Sn and projectile-target spin-dependent interactions.** Sakuragi, Y.; Yahiro, M.; Kamimura, M.; Tanifuji, M. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jul 1986. 57p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87702921.

Scattering of /sup 7/Li by /sup 120/Sn targets at E/sub lab/ = 44 MeV is investigated in the coupled-channel frame by taking account of the projectile virtual excitations to the lowest three excited states. Calculations are performed by the cluster-folding (CF) interactions and the double-folding (DF) one. Both interactions reproduce very well the expeimental data on the cross section, the vector analyzing power, the second-rank tensor ones and the third-rank tensor one in elastic and projectile inelastic scattering, although some differences are found between the CF results and the DF ones. In the calculation, the virtual excitations of the projectile are important for most of the analyzing powers and the spin-orbit interaction is indispensable for the vector analyzing power. These features are in contrast to those in /sup 7/Li - /sup 58/Ni scattering at 20 MeV and are interpreted as over-Coulomb-barrier effects. The scattering amplitudes and the analyzing powers are investigated by the invariant amplitude method, which provides a key connecting the spin-dependent interactions to the analyzing powers. The method proposes an important relationship between the tensor analyzing powers, which is useful in analyses of both theoretical and experimental results. Finally, it is found that in the elastic scattering the second-rank tensor analyzing powers are proportional to the strength of the second-rank tensor interaction and the vector and third-rank tensor analyzing powers to the square or cube of the strength of this interaction, while in the inelastic scattering the cross section is proportional to the square of the strength of the tensor interaction, other quantities being weakly dependent on the strength.

48881 (KFTI—86-24) **Carbon photodisintegration with nucleon pair production in intermediate energy range.** Voloshchuk, V.I.; Dogyust, I.V.; Kirichenko, V.V.; Khodyachikh, A.F. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1986. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703333.

Using diffusion chamber, installed on a beam of bremsstrahlung gamma-quanta with the maximum energy of 150 MeV, reactions of carbon photodisintegration with the nucleon pairs production have been studied. It is shown that at the energies exceeding 50 MeV electric dipole interaction of gamma-quanta with correlated neutron-proton pairs of a nucleus takes place. Cross sections of reactions with the yield of two protons both with neutrons knocked out and without neutron participation constitute (7.71 +- 0.15)% of cross sections of the reactions with np-pairs in the final state. Cross sections of gamma-quanta absorption by correlated pp-pairs do not exceed (0.29 +- 0.20)% of cross sections with np-pair yield. Conventional quasideuteron model described satisfactorily the dependence of integral photoabsorption cross section on the energy. 11 references, 4 figures, 1 table.

48882 **Isovector couplings for nucleon charge-exchange reactions at intermediate energies.** Love, W.G.; Nakayama, K.; Franey, M.A. (Department of Physics and Astronomy, University of Georgia, Athens, Georgia 30602). *Physical Review Letters;* **59**: No. 13, 1401-1404(28 Sep 1987).

The isovector parts of the effective nucleon-nucleon interaction are studied by examination of the reaction /sup 14/C(p,n) at intermediate energies near zero momentum transfer with use of recently developed G-matrix and free—t-matrix interactions. The spin-independent coupling (V/sub tau/) exhibits a strong energy and density dependence which, in the case of the G matrix based on the Bonn potential, significantly improves the agreement between calculated values of chemical bondV/sub σ//sub tau//V/ sub tau/chemical bond^2 at q = 0 and those recently extracted from the reaction /sup 14/C(p,n).

48883 **(γ,p) and (π,p) reactions in the Δ (1232) resonance region.** Matthews, J.L. (Massachusetts Institute of Technology, Cambridge, MA 02139). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 296-311(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

A sample of the available experimental data on (γ,p) and (π,p) reactions in complex nuclei is presented, together with a few recent results on the (γ,np) and (π^+,pp) processes. The data are seen to provide information on photon and pion interaction mechanisms in the Δ (1232) resonance region.

48884 **Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei.** Brady, F.P.; Christie, W.B.; Romero, J.L.; Tull, C.E.; Webb, M.L.; Crawford, H.W.; Greiner, D.E.; Lindstrom, P.J.; Sann, H. (University of California, Davis, CA 95616). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 382-383(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

The charge and transverse momentum distributions for the heavy-ion reactions with 1.2 GeV per nucleon 139-La incident on 12-C, 16-O, and 40-Ar targets are presented. Fragment momentum isotropy predicted in some models does not appear in these results.

6514 Nuclear Properties And Reactions, A=20-38, Experimental

48885 (INS—593) **Unitary three-body calculation of nucleon-nucleon scattering. Improved model for πN P/sub 33/ interaction.** Tanabe, H.; Ohta, K. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jul 1986. 62p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87702918.

We calculate nucleon-nucleon elastic scattering phase parameters based on a unitary, relativistic, pion-exchange model. The results are highly dependent on the off-shell amplitudes of πN scattering. The isobar-dominated model for the P/sub 33/ interaction leads to too small pion production rates owing to its strong suppression of off-shell pions. We propose to expand the idea of the Δ-isobar model in such a manner as to incorporate a background (non-pole) interaction. The two-potential model, which was first applied to the P/sub 11/ partial wave by Mizutani and Koltun, is applied also to the P/sub 33/ wave. Our phenomenological model

for πN interaction in the P/sub 33/ partial wave differs from the conventional model only in its off-shell extrapolation, and has two different variants for the πN -> Δ vertex. The three-body approach of Kloet and Silbar is extended such that the background interactions can be included straightfowardly. We make detailed comparisons of the new model with the conventional one and find that our model adequately reproduces the /sup 1/D/sub 2/ phase parameters as well as those of peripheral partial waves. We also find that the longitudinal total cross section difference Δσ/sub L/ (pp -> NNπ) comes closer to the data compared to Kloet and Silbar. We discuss about the backward pion propagation in the three-body calculation, and the Pauli-principle violating states for the background P/sub 11/ interaction.

48886 (CONF-870970—3) Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay. Toth, K.S.; Nitschke, J.M.; Wilmarth, P.A.; Ellis-Akovali, Y.A.; Sousa, D.C.; Vierinen, K.; Moltz, D.M.; Gilat, J.; Rao, N.M. (Oak Ridge National Lab., TN (USA); Lawrence Berkeley Lab., CA (USA)). 1987. Contract AC05-84OR21400. 4p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014797.

From 5. international conference on nuclei far from stability; Lake Rosseau, Canada (14 Sep 1987).

Progress is reported for a collaborative program, involving researchers from the Lawrence Berkeley and Oak Ridge National Laboratories, which has now been in progress at the SuperHILAC OASIS on-line facility for more than two years. In these investigations properties of short lived nuclei near the N = 82 neutron shell have been studied, their decays being assayed with particle, gamma ray, x ray, and positron detectors. Nuclides investigated so far were produced in ^{58}Ni bombardments of ^{96}Ru, ^{94}Mo, and ^{92}Mo. The focus of the study has been primarily two-fold: (1) to gain insight into the nature of the sharp peaks seen in the delayed proton spectra that accompany the beta decays of N = 81 even Z precursors, and (2) to investigate low lying states in nuclei near N = 82, levels whose structures should be describable by shell model analyses. 9 refs., 2 figs. (DWL)

48887 (CONF-8703121—6) Double beta decay experiment using ^{100}Mo. Alston-Garnjost, M.; Dougherty, B.L.; Kenney, R.W.; Krivicich, J.M.; Tripp, R.D.; Nicholson, H.W.; Dieterle, B.D.; Leavitt, C.P. (Lawrence Berkeley Lab., CA (USA); Mount Holyoke Coll., South Hadley, MA (USA); New Mexico Univ., Albuquerque (USA)). 1987. Contract AC02-78ER04831;AC03-76SF00098. 9p. NTIS, PC A02. File Number DE87014069.

From Telemark IV - neutrino mass and neutrino astrophysics; Ashland, WI, USA (16 Mar 1987).

We have started a search for double beta decay of ^{100}Mo using lithium drifted silicon Si(Li) detectors and thin molybdenum (Mo) foils. The experiment is located in the Consolidated Silver mine at Osburn, Idaho. We present preliminary results comparing a prototype array above ground to the array below ground, both without Mo foils. We also present data from an underground run with ^{100}Mo foils which gives a half-life limit for the Majoron decay mode of ^{100}Mo greater than 5 x 10^{19} years (68% confidence level) equivalent to 8 x 10^{20} years for ^{76}Ge. 4 refs., 8 figs.

Schuster Lab.; Institut Laue-Langevin, 38 - Grenoble (France); Daresbury Lab. (UK)). 1987. Contract AC02-76CH00016. 4p. (CONF-8708101—9). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014918.

From 6. international symposium on capture gamma-ray spectroscopy; Leuven, Belgium (31 Aug 1987).

An extensive study of the level structure of ^{189}Os has been carried out using the (n,γ) and (n,e-) reactions. The use of the Average Resonance Capture technique ensures that the complete set of 1/2-, 3/2- states has been established up to 1500 keV in excitation energy and secondary γ-rays have been measured in singles and coincidence to build up the detailed level scheme. 7 refs., 2 figs.

48889 (CONF-870970—2) Nuclear structure effects on alpha reduced widths. Toth, K.S.; Ellis-Akovali, Y.A.; Kim, H.J.; McConnell, J.W. (Oak Ridge National Lab., TN (USA); UNISOR, Oak Ridge, TN (USA); Lawrence Berkeley Lab., CA (USA)). 1987. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014796.

From 5. international conference on nuclei far from stability; Lake Rosseau, Canada (14 Sep 1987).

A review of α widths for s-wave transitions is presented together with a discussion of the following topics: (1) a new determination of the ^{219}Ra half-life and its relation to reflection asymmetry in nuclei near N = 130, (2) a measurement of the ^{194}Pb α-decay rate and the influence of the Z = 82 gap on neutron-deficient Pb nuclei, and (3) an up-date of α-decay-rate systematics for isotopes in the rare earth and medium-weight mass regions. 16 refs., 6 figs.

48890 (CONF-8706193—1) Energetic M1 transitions as a probe of nuclear collectivity at high temperatures. Baktash, C. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014564.

From International conference on nuclear shapes; Crete, Greece (28 Jun 1987).

At ORNL, we have recently utilized the Spin Spectrometer setup to investigate the differential effects of increasing spin and excitation energy on nuclear shape and collectivity in ^{158}Yb. Along the yrast line of this and other N = 88 nuclei, weakly prolate shapes gradually give way to triaxial, and then finally to non-collective oblate shapes as the spin approaches 40 h-bar. However, above the yrast line, large deformation and collectivity once again sets in. This is evidenced by the emergence of a broad quadrupole structure (E/sub γ/ ≃ 1.2 MeV) in the continuum gamma-ray spectra that grows with increasing temperature. The short (sub ps) lifetimes of these transitions attest to the collective nature of these structures. The emergence and growth of the quadrupole structure at high excitation energies is closely correlated with the appearance of energetic (E/sub γ/ ≃ 2.5 MeV), fast M1 transitions which form another broad structure in the continuum spectra. From the centroid of the M1 bump, a quadrupole deformation parameter of 0.35 is inferred. Because of this sensitivity, these energetic M1 transitions provide a unique probe of nuclear shape in the excitation energy range of ≃ 3 to 10 MeV. 6 refs., 2 figs.

48891 (CONF-8708123—1) Nuclear collectivity at high spins determined from lifetime measurements. Johnson, N. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014408.

From International conference on nuclear structure through static and dynamic moments; Melbourne, Australia (25 Aug 1987).

Doppler-shift recoil-distance lifetime measurements have been performed on several nuclei whose Fermi surfaces ranged from the bottom to the middle of the i/sub 13/2/ neutron shell. The collective behavior deduced from the data is interpreted in terms of evolving triaxiality at high rotational frequencies as a result of the shape-driving influence of i/sub 13/2/ quasineutrons, in general agreement with both cranked shell model and self-consistent theories. Evidence is also presented for influence from h/sub 9/2/ protons at very low rotational frequencies in light tungsten nuclei. 21 refs., 8 figs.

48892 (INIS-mf—10663) Study of the new M1 orbital mode in /sup 154/Gd and the structure of the Majorana interaction in the interacting boson model (IBM). Hartmann, U. (Technische Hochschule Darmstadt (Germany, F.R.). Inst. fuer Kernphysik). Aug 1986. 116p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE87752619.

For the detection of the new M1 orbital mode in /sup 154/Gd the excitation energy range between E/sub x/=1.7 and 4.0

MeV was studied with high-resolution electron scattering. Altogether eight spectra with incident energies between E/sub 0/=20 and 50 MeV and scattering angles between Θ=117/sup 0/ and 165/sup 0/ were taken up. The new orbital mode could be detected at an excitation energy of E/sub x/=2.936 MeV with a transition strength of B(M1,k)arrow up = 0.85 +- 0.10 μ/sub N//sup 2/. In the excitation energy range studied nine magnetic dipole excitation with a transition strength of altogether 4.3 μ/sub N//sup 2/ were found. The search for further members of the k/sup π/=1/sup +/ band the bandhead of which is the new orbital mode yielded clear hints to a mixed-symmetric J/sup π/=2/sup +/ state, but no to a magnetic octupole excitation. For the nuclei /sup 154/Sm, /sup 154/Gd, /sup 156/Gd, /sup 158/Gd, /sup 164/Dy, and /sup 168/Er the parameters of the IBM Hamiltonian were determined which contains the pairing, quadrupole, and Majorana force. For the Majorana-force strength parameter a systematic was established which encloses also the nuclei /sup 46/Ti, /sup 110/Pd, /sup 232/Th, and /sup 238/U. By this systematic the excitation energy of the new orbital mode can be predicted. By means of the performed calculations the symmetry properties of nuclei could be illustrated in the framework of the IBM for the first time by means of an equilateral triangle. The edges of the triangle correspond thereby to the limiting cases of a vibrator, rotator, respectively γ-unstable nucleus.

48893 (JINR-R—4-86-756) Mechanism of neutron inelastic scattering on the ^{164,166,168,170}Er isotopes. Grigor'ev, E.P.; Ivanova, S.P.; Kabesas, R.; Miko, G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703326.

Submitted to the journal Izv. AN SSSR, Ser. Fiz.

Cross sections of neutron inelastic scattering on $^{164, 166, 168, 170}$Er isotopes are calculated with taking into account both direct and compound nucleus processes. The calculations are given on the base of the axial and nonaxial rotator models. It is shown that the theoretical cross sections are in accordance with the experimental data, but for correct understanding of anharmonicity it is necessary to have more precise measurements. 18 references, 4 tables.

48894 (OUP—87-08) Particle-vibration coupled states in /sup 161/Dy. Ramsoey, T.; Atac, A.; Engeland, T.; Guttormsen, M.; Rekstad, J.; Loevhoeiden, G.; Thorsteinsen, T.F.; Vaagen, J.S. (Oslo Univ. (Norway). Fysisk Inst.). Mar 1987. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752513.

States in /sup 161/Dy have been populated using the inelastic (tau,tau') reaction. Strong particle groups in the 0.9 MeV excitation region are interpreted to arise from a coupling of an odd particle in the [642]5/2/sup +/ Nilsson orbital to a γ-vibration of the even core. The 1/2/sup +/ and 3/2/sup +/ members of the antialigned particle-vibration sequence are found to interact with states from the N=4 and N=6 oscillator shell, thus modifying previous conclusions on the ΔN=2 coupling. The particle-vibration states are discussed within a particle-core model. 16 refs.

48895 (OUP—87-10) Decay of hot dysprosium nuclei. Atac, A.; Rekstad, J.; Guttormsen M.; Messelt, S.; Ramsoey, T.; Thorsteinsen, T.F.; Loevhoeiden, G.; Roedland, T. (Oslo Univ. (Norway). Fysisk Inst.). Mar 1987. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752514.

The γ-decay following the /sup 162,163/Dy(/sup 3/He,αxn) reactions with E/sub (sup 3)He/=45 MeV has been studied. Non-statistical γ-radiation with energies of E/sub γ/≃1 MeV and ≃2 MeV is found for various residual nuclei. The properties of these γ-ray bumps depend on the number of emitted neutrons and reveal an odd-even mass dependence. New techniques to extract average neutron energies as a function of excitation energy and of the number of emitted neutrons are employed. The deduced neutron energies are consistent with Fermi-gas model predictions. 11 refs.

The relation binding the probability of the reaction (μ/sup -/, pxn) with (N-Z)/A parameter, where A,N,Z-number of nucleons, neutrons and protons in a nucleus is established. The relation is applicable to reactions (μ/sup -/, pxn) with stable as well as radioactive nuclei (nuclear fission fragments). 8 refs.; 2 figs.

48899 (JINR-E—7-86-732) Experimental study of α-fission fragment correlations in the ^{232}Th(^{12}C,αf) reaction. Augustynyak, W.; Borcea, C.; Lewitowicz, M.; Nguen Hoai Chau; Penionzhkevich, Yu.E.; Sandukovski, V.G.; Chojnacki, S.; Sowinski, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703318.

Submitted to the journal J. Phys. G: Nucl. Phys.

Inclusive and correlation spectra of alpha particles and fission fragments were measured for the ^{232}Th+^{12}C (85 MeV) reaction, with the aim of separating different mechanism contribution. At backward angles α emission can be explained for by the evaporation processes. At forward angles the most important contribution is given by the break-up-fusion process. Mass distributions for compound nuclei ^{244}Cm (E*=58 MeV, ff coincidences), and ^{240}Pu(E*=37 MeV, ff/sub α/ coincidences) were obtained. In the case of ^{240}Pu mass distribution has a shape different from those obtained in light ion reactions at the same excitation energy idicating the strong influence of the entrance channel. The dependence of the mass distribution shape on the α-particle energy is also examined. The weak dependence of this shape on the α particle energy seems to be a combined effect of the projectile α cluster structure and of the Q values of different contributing exit channels. 16 references, 8 figures.

From Saturne workshop; La Londe-les-Maures, France (10 Nov 1986).

Experimental indications leading to the thought of a very excited nucleus fragmentation are resumed. Theoretical approaches are briefly described; they are used to explain the phenomenon in showing off they are based on a minimum information principle. This model is based on time dependent Thomas-Fermi calculation which allows the mean field effect description, and with a site-bound percolation model which allows the fluctuation description.

From 25. winter school on nuclear structure; Zakopane, Poland (1 May 1987).

Quasi-molecular rotational bands characterized by spin states of alternating parity connected by enhanced E1 transitions have recently been observed in several transitional nuclei around ^{224}Th. The appearance of such bands can easily be understood by assuming the absence of intrinsic parity symmetry in these nuclei. Another likely region on the chart of nuclides to find octupole-unstable nuclei is the region of nuclei around ^{146}Ba. In fact, in several Xe, Ba and Ce isotopes with n approximately equal to 88, calculations yield octupole-unstable ground states. The main goal of the present study was to calculate equilibrium deformations of doubly-even Xe, Ba, Ce, Nd, Sm and Gd nuclei with neutron numbers between 84 and 94. The method used was the Woods-Saxon-Bogolyubov cranking model method combined with the shell correction approach. The results of these calculations confirm previous expectations of octupole deformed mean fields at low and medium spins in Xe-Sm nuclei with neutron numbers around N = 86. Recent experimental data support theoretical results. 8 refs., 1 fig. (DWL)

NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014004.

From International conference on nuclear shapes; Crete, Greece (28 Jun 1987).

Alpha-particle angular distributions with respect to the spin direction of residual nuclei have been measured in heavy-ion fusion reactions. The spin direction was determined by measuring the γ-ray angular distributions, for each event, using the spin spectrometer. α-particle anisotropies have been extracted for the compound nuclear systems: ^{110}Sn*(94 MeV), ^{114}Sn*(80 MeV), ^{138}Nd*(82 MeV), ^{164}Yb*(67 MeV) and ^{170}Yb*(135 MeV) as a function of the α-particle energy and γ-ray multiplicity. The results are compared with statistical model calculations using transmission coefficients from a spherically symmetric optical model potential. The trend of the anisotropy coefficients below the evaporation Coulomb barrier is consistent with spherical emitting shapes in the case of the Sn* isotopes. Small deformation effects are suggested by the ^{138}Nd* and ^{164}Yb* data. The ^{170}Yb* data indicate a large deformation which increases considerably with increasing spin. These results are in agreement with findings for similar systems in which the decay of the giant resonances built on excited states have been studied. 16 refs., 5 figs.

48904 (DOE/ER/40334—1) Nuclear excitations and reaction mechanisms: Progress report: [1 August 1986-31 July 1987]. Fallieros, S.; Levin, F.S. (Brown Univ., Providence, RI (USA). Dept. of Physics). 1 Aug 1987. Contract FG02-87ER40334. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000063.

Completed and ongoing research includes various theoretical and numerical studies of few-nucleon systems; nuclear reaction models; photon scattering from nuclei, including sum rules and current conservation; and properties of the pion.

48905 (IAE—4281/2) Self-consistent description of magic nucleus properties by method of effective energetic functional of density. Smirnov, A.V.; Tolokonnikov, S.V.; Fayazov, R.F.; Fayans, S.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1986. 36p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87702895.

The principal characteristics of magic nuclei are calculated on the basis of simple energetic functionals of density with introduction of finite-range pair forces but only if the nucleon effective mass equals the void mass. It is shown that in such an approach binding energies, charge and mass distributions, as well as one-particle spectra can be decribed with approximately the same accuracy as in the quasi-particle Lagrange method providing a good agreement with the experimental data. 31 refs.; 14 tabs.

48906 (INDC(HUN)—023/L) Exciton cascade model for fast neutron reactions. Schram, Z.; Kluge, G.; Sailer, K. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Jun 1987. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703268.

A more sophisticated version of the exciton cascade model, treating equilibrium and pre-equilibrium particle emissions in a unique way has been developed and applied to the description of neutron induced reactions, using realistic input data. The master equation describing the nuclear relaxation process has been solved by Monte-Carlo method. The role of Pauli's exclusion principle and different estimates of the transition matrix elements between different exciton configurations are discussed. The model is free of any adjustable parameter. Good agreement of the results of calculations with experimental data has been found for some medium and heavy nuclei. 36 refs, 14 figs.

Kratkie Soobshcheniya po Fizike.; (no.12).

In Quantum radiophysics. Collection.

Quasiclassical expressions for forward scattering amplitude and total scattering cross-section are obtained using hadron-nucleus optical potentials with a strong edge absorption. The above-mentioned expressions are used in pion, kaon and antinucleon scattering on nuclei (i.e., in case of strong absorption). 3 refs.

48915 (INIS-SU—418, pp 32-34) **On a possibility of narrow dibaryon production in gamma-quanta scattering on nuclei.** Fil'kov, L.V. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780180.

Kratkie Soobshcheniya po Fizike.; (no.11).

In Plasma physics. Collection.

Gamma-quanta scattering on nuclei is shown to be used in search for narrow nonstrange dibaryons and to estimate six-quark cluster contribution to nuclei. Mechanisms of elastic and inelastic (with break up or 6q-cluster production) gamma-quantum scattering on deuterium are considered. 4 refs.; 2 figs.

48916 (INS—595) **Lateral ejection of low energy protons in high energy heavy-ion collisions.** Kitazoe, Y.; Toki, H.; Yamamura, Y.; Nagamiya, S.; Sano, M. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jul 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702920.

The lateral ejections of low energy protons in E/sub L/ = 0.8 GeV/nucleon A + A collisions are systematically studied in terms of the nuclear cascade model, from the viewpoint of the mass number and charge-multiplicity dependences. The double differential cross sections for low energy (E/sub c/ < 100 MeV) protons indicate the peaking behavior around θ/sub c/ = 90 deg in higher multiplicity events than M = 60. The cascade model without the nuclear compressional effect can cause the lateral ejection of low energy protons in the higher multiplicity events, where the nucleons in the participant region are solely responsible for this ejection. High-density nucleons are formed in La + La central collisions, while Ar + KCl central collisions give only small disturbances to the nuclei. The energy spectra of laterally ejected protons have a very strong time-dependence in La + La central collisions.

48917 (INS—599) **Recent experiments on photonuclear reactions at the Tokyo 1.3 GeV electron synchrotron.** Kato, S.; Okuno, H. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jul 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702923.

The present status, recent experimental results and plans for the near-term future of the Tokyo 1.3 GeV electron synchrotron are reviewed briefly. In the past two years, the main experimental

activity was around photo-nuclear reactions on deuteron, helium and other nuclei. Recently, a new tagged and polarized photon beam channel has been installed, which is expected to improve substantially the quality of experiments.

48918 **(INS—604) Is the saddle-point-method a proper approximation for nuclear level density?.** Sato, Hiroshi. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Sep 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702927.

The nuclear level density is formulated and studied in terms of the antisymmetrized temperature dependent density matrix of many fermions in a harmonic oscillator well. Experimentally observed characteristic features of nuclear level density are reproduced. In addition the excitation energy dependence of the level density parameter a is found. The relationship between this treatment and a conventional level density formula is discussed.

48919 **(IPNO-DRE—86-22) Neighbouring charge fragmentations in low energy fission.** Montoya, M. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Oct 1986. 11p. (CONF-8610289—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE87752583.

From Fission meeting; Arcachon, France (14 Oct 1986).

Shell and odd-even effects in fission have been largely studied until now. The structure in fragment mass, charge and kinetic energy distributions of fragments were interpreted as shell and even-odd effects. In this paper, we want to show that the discret change of fragment charge symmetry should produce also structures in those distribution. 19 refs.

48920 **(IPNO-TH—86-51) About nucleon-nucleon potential: meson exchange currents and relativistic approach of nuclear structure.** Mathiot, J.F. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Jun 1986. 194p. (In French). NTIS (US Sales Only), PC A09/MF A01. File Number DE87752342.

Various aspects of nuclear physics at intermediate energies, in connection with the description of the nucleon-nucleon potential in terms of mesons, are presented in this thesis. The meson exchange current contribution is studied in the case of the deuteron (np capture and electrodisintegration near threshold). A consistent description of these processes is discussed, with particular emphasis on the effective range of the current, for momentum transfers as large as q/sup 2/~1 (GeV/c)/sup 2/. The structure of finite nuclei and nuclear matter is then analysed in the framework of a relativistic formalism, in which the negative energy component of the nucleon wave function is explicitly taken into account. The nuclear matter saturation mechanism is studied in details and compared with the non-relativistic limit. Properties of finite nuclei are also discussed. Finally, the structure of the nucleon itself in the nuclear medium is investigated. A connection between the polarisation of the nucleon (three valence quark component), the incompressibility parameter and the mass of the first monopole excitation of the nucleon is presented.

48921 **(ITEF—86-1986) Fast hadron energy losses by excitation of nuclear matter.** Gavrilov, V.B.; Leksin, G.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703276.

A concept of deep inelastic hadron-nuclear reactions as a series of local interactions of a fast hadron with nuclear matter permits to introduce a notion of hadron specific energy losses by nuclear matter excitation. Due to nuclear scaling this value does not depend on the energy and type of an incident particle. The estimations made on the basis of experimental data on inclusive particle spectra in the nuclear fragmentation range, as well as regularities of approximation to limiting fragmentation for different nuclei lead to the value of hadron specific energy losses in the nuclear matter of about 1 GeV/fm. 29 refs.

48922 **(ITEP—69-1985) Deuteron production and space-time characteristics of high-energy hadron-nucleus reactions.** Gavrilov, V.B.; Kornienko, N.L.; Leksin, G.A.; Semenov, S.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703307.

A contribution of the coalescence to deuteron production is discussed on the basis of data on inclusive deuteron and proton production in hadron nucleus interactions. Angular dependence and A-dependence of the coefficient of two nucleon coalescence into a deuteron are analysed for 7.5 GeV/c pA and 5 GeV/c π/sup -/A interactions. The results suggest the shape of the interaction region extended alons the trajectory of the incident hadron and a successive knock-out of nucleons during propagation of the incident particle through a nucleus propagation of the incident particle through a nucleus. 24 refs.; 4 figs.

48923 **(ITEP—98-1985) Transparency, stopping power and thermalization of nuclear matter in the Ca+Ca and Nb+Nb reactions at E/A=400 MeV: classical equation of motion approach.** Kiselev, S.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702945.

Recent charged-particle exclusive data for Ca+Ca and Nb+Nb collisions at E/A=400 MeV are analyzed on the basis of the classical equation of motion model. The model reproduces the very small variation of the deflection of the projectile fragments as a function of multiplicity. The simulated head-on events demonstrate the lack of transparency although in the case of Ca+Ca the complete nuclear stopping is absent. In the central Ca+Ca collisions the thermalization inside the compression zone is not realized on the average whereas in the case Nb+Nb it takes place probably only at the end of zone life. 6 refs.; 5 figs.

48924 (JINR—D-4-85-851, pp 8-26) **Quasiparticle-phonon nuclear model.** Solov'ev, V.G. 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Main statements of the nucleus quasiparticle-phonon model (NQPPM) are described. NQPPM hamiltonian is built on the basis of the approximate solution of the nuclear many-body problem. The hamiltonian consists of the average field of neutron and proton systems in the form of Saxon-Woods potentials and interactions leading to pair correlations of the superconducting type. It is substantially that the interaction between quasiparticles is presented in a separable form. Peculiarities and advantages of NQPPM are marked. The general calculation procedure in NQPPM is given. NQPPM application for description of fragmentation of charge-exchange resonances in spherical nuclei and vibrational low-lying states in even-even deformed nuclei is considered. The conclusion is made that in the framework of NQPPM one can calculate many properties of complex nuclei at low, high and mean excitation energies. The fact that in NQPPM it is possible to obtain with a unique set of parameters good description of just a lot of nuclear characteristics in quite a wide range of excitation energy has shown that NQPPM covers correctly main features of the nuclear many-body problem. 52 refs.; 4 figs.

48925 (JINR—D-4-85-851, pp 27-50) **Single-particle motion in spherical nuclei at high excitation energies.** Stoyanov, Ch.; Vdovin, A.I.; Voronov, V.V. (Bylgarska Akademiya na Naukite, Sofia. Inst. za Yadrena Izsledvaniya i Yadrena Energetika; Joint Inst. for Nuclear Research, Dubna, USSR). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The purpose of the lecture is to look to the properties of the single-particle motion at low and high excitation energies. The examples pointed out will be based mainly on the studies within the

quasiparticle-phonon nuclear model (QPM). In recent years the model has been successfully applied to study the properties of the excited states in spherical and deformed nuclei. An impression about the mathematical frameworks of the QPM for the odd spherical nuclei is given. Some properties of the single-particle states in the average nuclear field are discussed. Based on the selected examples an impression how the single-particle states influence the behaviour of the complex quantities such as B(M2)-values and neutron strength functions is given. The description of the spreading widths of the high-lying single-particle (or hole) modes in the odd spherical nuclei is discussed. Some new results and predictions of the model and also comparison with the other theoretical approaches is presented. 50 refs.; 10 figs.

48926 (JINR—D-4-85-851, pp 104-123) **Spin modes.** Gaarde, C. (Niels Bohr Inst., Copenhagen, Denmark; Copenhagen Univ., Denmark). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The charge-exchange (p, n), (/sup 3/He, t), (d, 2p) reactions and the heavy ion charge exchange at intermediate energies and targets with A=12-208 are studied. It is noted that this reactions as a step process certainly. The energy spectra of final nuclei and angular distribution are given. The Δ-resonance energy in nuclei is considered. This reactions very selectively s isospin-spin modes of target-nucleus. 29 refs.; 18 figs.

48927 (JINR—D-4-85-851, pp 140-152) **On triplet pairing in nuclei.** Shapiro, I.S. (AN SSSR, Moscow. Fizicheskij Inst.). 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The triplet Cooper pairing (TCP) (spin of pairs S=1) in nuclei is considered. Two groups of qualitative consequences of TCP are marked: enrichment of the collective excitation spectrum and anisotropy of the triplet superfluid liquid (a drop of nuclear liquid). Enumeration of possible six superfluid phases in nuclei with TCP and strong spin-orbit coupling is given. The conclusion is made that there are physical causes for the presence of, at least, seven bad intercombining collective modes of the Cooper bose condensate types corresponding to singlet and triplet pairing in the nuclear spectra. There must be a band of good intercombining between each other levels including one- and two-quasiparticle ones over the lowest energy state in each mode. Two-slit spectrum, characterized by M1-transitions between neighbouring components of multiplet and the specific rule of intervals, may be used for the identification sign of the condensate nature for such quasiparticle excitations. It is clear that collective excitations are also possible in each phase besides quasiparticle ones. 8 refs.; 3 figs.

48928 (JINR—D-4-85-851, pp 153-172) **Microscopic foundation of the interacting boson model.** Barrett, B.R. (National Science Foundation, Washington, DC, USA). 1985. NTIS (US Sales Only), FC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The development of the proton-neutron interacting boson model (IBM) (IBM-2) has allowed a connection to be established with the microscopic nuclear shell model. The procedure, by which one relates the microscopic structure of the boson to the underlying fermion degrees of freedom, is generally referred to as the interacting boson approximation (IBA). The IBA can be viewed as a truncation of the fermion shell model to some small set of collective configurations, which can be related to the s and d bosons. It is found that the neutron-proton IBM (IBM-2) is possible understood as a wave-function truncation of the fermion shell-model space to a few, important collective degrees of freedom. By performing a Marumori mapping of either generalized-seniority or coherent fermion states into corresponding boson states the IBM-2 parameters by equating fermion and boson matrix elements are calculated. The lowest-order SD-space results were found to be inadequate, particularly for well-deformed nuclei, because of the emission of Pauli effects and of degrees of freedom outside the SD space, such as G pairs. Finally it is found that by including G pairs in the coherent-state configurations and by renormalizing the boson operatos (e.g., the boson Hamiltonian) for Pauli effects and for the influence of the g boson that quite reasonable agreement can be obtained with the empirical IBM-2 parameter values. Whether or not other degrees of freedom outside the SD space, besides the G pair, play an important role in determining the structure of the sd boson Hamiltonian is still an open question. 66 refs.; 2 figs.

48929 (JINR—D-4-85-851, pp 173-196) **Boson models of quadrupole collective motion. New about old.** Zelevinskij, V.G. (AN SSSR, Novosibirsk. Inst. Yadernoj Fiziki). 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The subject of the lecture is the low-lying excitations of even-even (e-e) spherical nuclei. The predominant role of the quadrupole mode, which determines the structure of spectra and transitions, is obvious on the background of shell periodicity and pair correlations. Typical E2-transitions are strengthened Ω — A/sup 2/ 3/ times in comparison with single particle evaluations. Together with the regularity of the whole picture it gives evidence about collectivization of quadrupole motion. The collective states are combined in bands, where the transition probability are especially great; frequencies ω of the strengthened transitions are small in comparison with pair separation energies of 2 E-bar — 2 MeV. Thus, the description of low-lying excitations of spherical nuclei has to be based on three principles: collectivity (Ω >> 1), adiabaticity (tau ident to ω/2E-bar << 1) and quadrupole symmetry. 47 refs.; 8 figs.

48930 (JINR—D-4-85-851, pp 197-207) **Mean field techniques in the interacting boson model.** Dobes, J. (Ceskoslovenska Akademie Ved, Rez. Ustav Jaderne Fyziky). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Essential ideas of application of the mean field techniques to interacting boson model (IBM) are shortly reviewed. The effects of angular momentum projection before variations are studied. Collective K=1/sup +/ states in the neutron-proton IBM (IBM-2) are studied; the IBM-2 within the mean field theory are discussed. The exact IBM-2 results are compared with approximate IBM calculations on the example of 1/sup +/ state energy and probability B(M1) for Gd isotopes. The importance of angular momentum projection is shown. 24 refs.; 2figs.

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Nuclear structure calculations are in prnciple simple: one chooses a model space defined by a few oscillator single-particle states. If one gets from somewhere the single-particle energies and the effective force for this model space one diagonalizes the many-body Hamiltonian in all possible configurations which one obtains by distributing the protons and the neutrons over the single-particle states. This approach has only one difficulty: the number of configurations is growing astronomically. The way out of this difficulty which authors are proposing is a Model for Number and Spin projected Two-quasiparticle Excitations with Realistic forces (MONSTER). The idea was to choose optimal quasiparticle states and build from these the Hartree-Fock-Bogolubov (HFB) wavefunction as a reference configuration. The angular momentum and particle number projected zero and quasiparticle state of this reference HFB wave function serves as a basis to diagonalize the many-body Hamiltonian. MONSTER has difficulties if the nature of the states changes by more than two quasiparticles relative to the HFB intrinsic reference state. This is for example the case for the second backbending in the rare earth nuclei which is due to the alignment of a h/sub 11/2/ proton pair. To describe such effects the Variation

of the single quasiparticle degrees of freedom After Mean field Projection In Realistic model spaces (VAMPIR) has performed. It is shown that one single-quasiparticle Slater determinant of VAMPIR is describing the yrast states practically equally well as the MONSTER approach. 25 refs.; 10 figs.

48932 (JINR—D-4-85-851, pp 220-235) **Equation of motion method to describe quasiparticle structures in transitional and deformed nuclei.** Doenau, F. (Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden, German Democratic Republic). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The development of the experimental techniques will supply one with more and more complete level schemes and transition matrix elements. This is a great challenge for the theorists to put the right questions and to work out the models accordingly. In this respect the method of equation of motion (EQM) seems to be a suitable approach the inherent possibilities of which are yet not fully explored. The EQM is sketched for the case of one-quasiparticle (1qp) excitation in odd-mass nuclei. The coupling of a particle to the quasrupole and pair field is treated using the IBA for the collective degrees of freedom. Physical implications are shortly discussed. The selfconsistent aspects of the theory are considered. A perturbational treatment is proposed to construct the physical subspace that is necessary to perform selfconsistent calculations of the collective core energies. The EQM is formulated for the two-quasiparticle (2qp) excitations in transitional nuclei inclusive the coupling to the collective excitations (0 qp space). EQM can be widely applied to describe the complicated interplay between collective degrees of freedom and quasiparticle configurations are concluded. 12 refs.

48933 (JINR—D-4-85-851, pp 236-244) **Macroscopic description of the collective motion in fast rotating nuclei.** Bal'butsev, E.B.; Mikhajlov, I.N. 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Application of mathematical methods developed in the theory of self-gravitating masses to solve the equations of the Fermi surface deformation (FSD) model allow to generalize the FSD model to rotating nuclei and extend the class of the phenomena described. Formalism of the FSD model, as well as the results studying the form of rotating nuclei and their oscillations: giant quadrupole resonance, giant octupole resonance, giant dipole resonance and bound to these resonances low-lying modes, are briefly described. 17 refs.; 4 figs.

48934 (JINR—D-4-85-851, pp 245-259) **Alignment effects and stable octupole deformation in the actinides.** Briancon, Ch.; Mikhajlov, I.N. (C.S.N.S.M. Orsay; Joint Inst. for Nuclear Research, Dubna, USSR). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Explicit relations between the alignment of the intrinsic octupole momentum and a new type of deformation which does not conserve the axial symmetry are established. It seems that such an octupole deformation of the nuclear shape is indeed a general property of nuclear high spin states, whatever may become the axial octupole shape with increasing rotational frequency. However the nature seems to be reticent to show such properties easily and fortunately there exists shell-effects which allow to study them at low spin but only in some exceptional cases. One should push forwards both theory and experiments in this field. From the experimental point of view, one may expect much from the new multidetection techniques although one must overcome the experimental difficulties arising from the high rate of fission products in the (HI, xn) reactions. 25 refs.; 11 figs.

48935 (JINR—D-4-85-851, pp 321-341) **Phase space in nuclear dynamics.** Toro, M. (Catania Univ., Italy. Ist. di Fisica; Istituto Nazionale di Fisica Nucleare, Catania, Italy). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

A semiclassical phase space approach to the nuclear dynamics, based on fully microscopic foundations, is presented. The starting point in the nuclear Vlasov equation derived from a phase space representation, through the Wigner transform of the density matrix, of a mean field theory like the time-dependent-Hartree-Fock (TDHF) approach. The TDHF method and its linearized version, RPA, both suffer from the drawback of being computationally very complicated and consequently not much transparent in the results. Some results for small amplitude nuclear collective motions obtained from the study of a linearized version of the nuclear Vlasov equation are shown. The solution discussed in the first part corresponds to scaling deformation modes of very collective nature where all the nucleons are moving together with distortions in momentum distribution maximum of quadrupole type. It is shown that these collective states correspond to giant resonances. In particular isovector giant dipole motions are discussed. A relevant feature of this semiclassical approach is that can be easily studied giant resonances built on any reference nuclear state. It will be used this to show how quantum fluctuations due to isovector giant dipole modes of a dinuclear system can account for the fragment charge variances in deep inelastic collisions. 31 refs.; 8 figs.

48936 (JINR—D-4-85-851, pp 124-139) **Spin excitations in nuclei.** Gareev, F.A.; Ershov, S.N.; Pyatov, N.I.; Fayans, S.A. (Joint Inst. for Nuclear Research, Dubna, USSR; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The theoretical papers devoted to the analysis of experimental data on spin excitations in nuclei at low energy transfers and momentum transfer are reviewed. Excitation of spin-isospin nuclear states in charge-exchange reactions (p, n), (/sup 3/He, t), (/sup 6/Li, /sup 6/He) on /sup 48/Ca, /sup 90/Zr, /sup 208/Pb nuclei is considered. The values of energy, probability and differential cross sections of excitation of M1 giant resonances of the above nuclei in (p, p) reactions at 201 MeV are given. The conclusion is made that the experimental data on spin excitations in nuclei accumulated by now can be described consistently within the framework of simple theoretical representations on the nuclear structure and the mechanism of nuclear reactions. 55 refs.; 4 figs.

48937 (JINR—D-4-85-851, pp 260-282) **Radiative capture of protons by medium nuclei and γ-ray strength functions.** Wilhelmi, Z. (Warsaw Univ., Poland). 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The vast amount of data on γ-ray spectra from the (p,γ) reactions in nuclei $50<A<90$ shows that the Lorentzian extrapolation of the giant dipole resonance (GDR) gives a much better fit to the observed E1 strength functions than the single particle model of Weisskopf. However the A-dependence of these radiative strength functions does not conform to Axel's predictions and seems to reveal the shell effects. The single particle model which predicts the A-dependence to be A/sup 2/3/ is also not adequate. The studies of the GDRs built on excited states have brought a proof of the Brink-Axel hypothesis and have shown that the (p, γ) reactions can be used to determine the spectroscopic factors of low-lying states in medium-mass nuclei but it is necessary to account here for the occurrence of both the DSD and CN mechanism in the investigated reaction. 56 refs.; 21 figs.

48938 (JINR—D-4-85-851, pp 283-294) **Multiquark systems and the lightest nucleus form factors.** Burov, V.V.; Luk'yanov, V.K. 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

Development of multiquark systems in the form factors of the lightest nuclei D and /sup 3/He is considered. Account of the meson exchange current contribution leads to the reduction of 6q-impurity contribution to form factor D. The assumption that 6q- and 9q-systems exist in /sup 3/He allows to describe /sup 3/He form factor in the whole region of momenta measured and transfered, taking into account the interference of channels. The table for probability values of 6q- and 9q-impurities in D and /sup 3/He, obtained during the analysis of different processes, is given. Qualitative agreement of the given probabilities between each other is marked. 36 refs.; 9 figs.

48939 (JINR—D-4-85-851, pp 304-320) **Heavy ion collisions: kinetic energy damping, nucleon emission.** Dzholos, R.V.; Ivanova, S.P. 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

The model for the description of heavy ion (HI) collisions is formulated. The collective hamiltonian, describing relative motion of colliding nuclei, their internal motion and the relation between relative motion and internal one, is constructed. It can be used both for the description of deep inelastic collisions of HI, and for the analysis of change in the internal state of colliding nuclei. The theoretical calculations of nucleon yield are obtained from the calculations of statistic nucleon and pre-equilibrium particle emission at the initial stage of the reaction. In the suggested model the main mechanism of kinetic energy dissipation is single-particle. The dependence of cross section of evaporated neutrons on the parameters of the statistical model has been investigated. Experimental data on the yield and energy dependence of cross section are reproduced in calculations. The angular anisotropy is qualitatively reproduced in calculations. Escape of nonequilibrium nucleons from a projectile particle is discussed. But high-energy neutron emission from the nucleus-target is possible. Therefore at total account the qualitative agreement can be improved. Closeness of numerical results to experimental ones gives the foundation for the statement that the supposed mechanism of nonequilibrium nucleon escape describes one of the sources of high-energy particle emission. 27 refs.; 8 figs.

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

One of the most interesting subjects in nuclear spectroscopy has been the study of two- and four-particle transfer reactions. While the possibility of reproducing the absolute value of the α-transfer cross section between heavy ions is an open question, that it is possible to account, in a quantitative way, for the trend observed in relative cross sections have been shown. The properties observed in two- and four-nucleon transfer reactions leading to the Zr isotopes can be understood in terms of the pairing vibrational model and determining the structure of the modes from one-particle stripping and pick-up reactions. Relative cross sections are also reproduced in (/sup 16/O, /sup 12/C) reactions. The comparison with the corresponding ones in (/sup 6/Li, d) reactions shows that the relative population of the different final states can be rather different in the two processes. As far as surface clustering is concerned, the pairing interaction leads, in the case of a spherical nucleus, to pairs of valence particles which are localized more closely on the nuclear surface than uncorrelated pairs are concluded. This should be responsible for larger transfer cross sections. Also in the case of deformed nuclei the inclusion of the pairing interaction leads to a large enhancement of the two- and four-particle surface clusterization and to an almost uniform distribution of the cluster probability over the nuclear surface. This is at variance with the case of particles moving in pure Nilsson orbits which are characterized by cluster probability distribution smaller in absolute value but strongly localized in space. 17 refs.; 6 figs.

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

New forms of nuclear decays detected lately: nucleon radioactivity, radioactivity with escape of nuclei, which are heavier than α-particles, and two-nucleon decay, are briefly described. Escape of protons is far from the main form of decay, at first α decay, spontaneous fission and light nucleus escape occur. Neutron-decay nuclei are determined only in the region of the lightest nuclei. Radioactive decay with complex nuclei escape represents a new phenomenon, occupying the intermediate position between α-radioactivity and fission. One of the main forms of nuclear decay, being on the stability boundary, can be two-nucleon decay. The first data on the escape of a diproton and dineutron at decay of the fixed nucleus state are obtained. 22 refs.; 9 figs.

48942 (JINR—D-4-85-851, pp 385-398) **Microscopic approach to description of heavy-particle decay of nuclei.** Kadmenskij, S.G.; Furman, V.I.; Chuvil'skij, Yu.M. (Voronezhskij Gosudarstvennyj Univ., USSR; Joint Inst. for Nuclear Research, Dubna, USSR; Moskovskij Gosudarstvennyj Univ., USSR. Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki). 1985. (In Russian). NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

A new form of radioactivity - nuclear decay in ground states with escape of particles heavier than /sup 4/He, is considered in the framework of the approach developed by authors. The approach is the generalization of the α-decay theory variant describing successfully relative and absolute probabilities of α-transitions based on nuclear shell model with configuration mixing. The results of calculations of spectroscopic factors, decay widths, decay energy for /sup 222,223,224,/ Ra decays with /sup 14/C emission, for /sup 232,233/U nuclei with /sup 24,25/Ne emission, and for /sup 231/Ra with /sup 24/Ne emission are presented. Data on α-decay of these nuclei are given for comparison. The conclusion is made that the approach developed is physically equivalent to the phenomenon studied and has the heuristic force. 22 refs.

48943 (JINR—D-4-85-851, pp 365-384) **Fission decay modes with compact shapes, heavy clusters emission and the superheavy nuclei.** Sandulescu, A. 1985. NTIS (US Sales Only), PC A18/MF A01. File Number DE88780001. (CONF-8510458—).

From International school on nuclear structure; Alushta, Ukrainian SSR (14 Oct 1985).

A new decay mode is predicted for the very heavy elements in which a nearly symmetric fragmentation with compact shapes takes place. The experimental observed total kinetic energy (TKE) distributions of fission fragments for /sup 258/Fm, /sup 259/Md, /sup 260/Md and /sup 258/No peaked either at low TKE (— 200 MeV) or high TKE (— 235 MeV) together with the very narrow symmetric mass distribution for high TKE and asymmetric mass distribution for low TKE are interpreted as evidences of such a decay mode. The proposed mechanisms can be distinguished from the spontaneous fission by coincidents measurements of fission fragments associated with no neutrons and no γ or low energy and low multiplicity γ-rays. Branching ratios of the predicted decay mode versus spontaneous fission are given which indicate that superheavy nuclei around N=164 have half lifes shorter than ms. Allso, it is shown that, if one treat the new decay modes as emission of heavy clusters one expect large enhancements due to the appearance of a pocket in the selfconsistent potential together with large hindrance factors due to the change of the deformation between the initial

and final states which make the evaluations of the half-lifes analogous with alpha decay meaningless. 9 refs.; 8 figs.

48945 (JINR-E—1-86-643) Characteristics of atomic nuclei employed as targets in high-energy nuclear collisions. Pawlak, T.; Perut, W.; Srugalska-Gola, E.; Miller, K.; Stugalski, Z. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703315.

Values determining the properties of atomic nuclei used as targets in nuclear collisions are presented. Average and maximum thicknesses of nuclear substance layers involved in the collisions at different impact parameters are calculated. The calculation is made for 24 atomic nuclei: ^{12}C, ^{14}N, ^{16}O, ^{19}F, ^{20}Ne, ^{27}Al, ^{28}Si, ^{32}S, ^{40}Ar, ^{52}Cr, ^{54}Fe, ^{59}Co, ^{64}Cu, ^{65}Zn, ^{73}Ge, ^{80}Br, ^{108}Ag, ^{127}J, ^{131}Xe, ^{181}Ta, ^{184}W, ^{197}Au, ^{207}Pb, ^{238}U. Tables containing the calculation results are presented. The tables are to be used when analyzing data on hadron-nucleus and nucleus-nucleus collisions. 12 references, 1 table.

48946 (JINR-E—4-86-396) Role of quasiparticle x phonon components in gamma-decay of high-lying states. Ponomarev, V.Yu.; Solov'ev, V.G.; Vdovin, A.I.; Stoyanov, Ch. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703317.

Submitted to the journal Phys. Lett., B.

In the framework of quasiparticle-phonon model of a nucleus the probabilities of gamma-transitions (E1, M1, E2) from a high-lying resonance-similar structure to the excitation of neutron hole state $(lg_9 2/)^{-1}$ of ^{111}Sn nucleus to the main and low-excited one-quasiparticle states have been calculated. Wave function of a highly excited state comprised the components quasiparticle x phonon and quasiparticle x two phonons. For E1-transitions $9/2^+ \rightarrow 11/2_1^-$ the main contribution to the transition is made by one-quasiparticle components of wave functions of the initial and final states. E2-transition $9/2^+ \rightarrow 7/2/\text{sub g,s/}^+$ takes place at the expense of impurities in quasiparticle x phonon states. For M1-transition from the states $9/2^+$ to the main one a strong destructive interference of contributions of one-quasiparticle and quasiparticle x phonon components is observed. Thus it is shown that components quasiparticle x phonon may play the major role in correct description of gamma-transitions from high-lying one-particle or low-lying hole states. 11 references, 2 figures.

48947 (JINR-R—2-86-629) On the mechanism of relativistic deuteron fragmentation on nuclei. Ignatenko, M.A.; Lykasov, G.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1986. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703322.

Submitted to the journal Sov. J. Nucl. Phys.

Contribution of different mechanisms of relativistic deuteron fragmentation into protons are investigated. It is shown that for the total momentum spectrum description at the same time with stripping that gives the main contribution one should take into account the intermediate π-meson production processes followed by absorption or pion rescattering by spectator-nucleon which dominate in a definite kinematic region. A possible contribution of the six quark state into the deuteron wave function can manifest itself only at a high momentum part of the proton spectrum, where other mechanism contributions are negligible. 27 references, 5 figures.

48948 (KFTI—86-18) Deuteron inelastic scattering by electrons in rest, $d+e^- \rightarrow e^-+eta+p$. Akhiezer, A.I.; Rekalo, M.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1986. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703329.

A general structure of differential cross section of high energy deuteron disintegration in their scattering by target electrons, $d+e^- \rightarrow e^-+eta+p$, is determined. The differential cross section dependence on vector and tenzor polarization is estimated. By this, the mechanism of the reaction is not concretized and deuteron is considered as an elementary particle with unit spin and a positive space parity. The developed formalism allows to estimate the connection between the differential cross section of the deuteron electrodisitegration and the disinegration of relativistic deuterons by electrons in rest. 15 references, 3 figures.

48949 (LA-UR—87-2633) Three-body forces and the trinucleons. Friar, J.L. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 15p. (CONF-8706200—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014738.

From CEBAF summer workshop; Newport News, VA, USA (22 Jun 1987).

Three-body forces are discussed in the context of classical, atomic, solid-state and nuclear physics. The basic theoretical ingredients used in the construction of such forces are reviewed. Experimental evidence for three-nucleon forces and an overview of the three-nucleon bound states are presented. 53 refs., 9 figs.

48950 (LA-UR—87-2716) Nuclear dynamics of bound eta mesons: Eta-mesic nuclei and mesic compound-nucleus resonances. Liu, L.C. (Los Alamos National Lab., NM (USA)). Jun 1987. Contract W-7405-ENG-36. 13p. (CONF-8706166—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014726.

From International symposium on medium energy physics; Beijing, China (23 Jun 1987).

The theory of eta-mesic nuclei is reviewed and the experiments designed to search for them are described. A theory of mesic compound nuclear resonances is presented which allow a study of the effects of eta-nucleus bound states on other meson-nucleus reactions in which the eta is not being observed. 7 refs., 8 figs.

48951 (LA-UR—87-2925) Relativisitic hydrodynamics and heavy ion reactions. Strottman, D. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 8p. (CONF-8705189—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014743.

From Conference on relativistic fluids; Noto, Italy (1 May 1987).

The author discusses a hydrodynamic model for describing heavy ion reactions in which the three dimensional relativistic Euler equations are solved numerically using the particle in cell method. This method allows for calculations in cases of extreme distortion and shear and provides a means for presenting graphical representations of the reaction process. The techniques are illustrated by considering the $^{20}Ne + ^{238}U$ and the $^{238}U + ^{238}u$ reactions at 393 MeV and 800 MeV laboratory energies, respectively. 16 refs., 4 figs.

48952 (LYCEN—8575) RPA spin-isospin nuclear response in the deep inelastic region. Alberico, W.M.; Molinari, A.; De Pace, A.; Johnson, M.B.; Ericson, M. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Nov 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87752591.

The spin-isospin volume responses of a finite nucleus are evaluated in the RPA frame, utilizing a harmonic oscillator basis. Particular emphasis is given to the mixing between the longitudinal and transverse couplings, which arise at the nuclear surface. We show that it reduces somewhat the contrast between the two spin responses. We compare the calculated transverse response with the experimental one extracted from deep inelastic electron scattering.

48953 **(LYCEN—8610) Nuclear binding and quark confinement.** Chanfray, G.; Pirner, H.J. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Mar 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752576.

We present a schematic solution of the color dielectric model for the nucleon and demonstrate how the nucleon can be bound in nuclear matter. The gluon field surrounding the bound nucleon is obtained from the linearized field equations of motion in the color dielectric. This schematic model of the baryon allows a comparison of the neutron and proton mass in the nucleus. We calculate the Nolen-Schiffer anomaly for several light nuclei.

48954 **(LYCEN—8614) Inclusive charge longitudinal response in finite nuclei.** Alberico, W.M.; Molinari, A.; Czerski, P.; Czerski, P.; Ericson, M. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire). Mar 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752590.

The experimental dynamic and static longitudinal structure factors of /sup 12/C, /sup 40/Ca and /sup 56/Fe are investigated with a semiclassical RPA theory. The parameters entering into the nuclear mean field (including the nucleon effective mass) and in the isoscalar and isovector particle-hole forces are set by best fitting procedures. Quite reasonable values of these quantities allow a satisfactory account of the experimental data over a wide range of momentum transfers in all the three nuclei. However, to achieve this result, the proton root mean square radius has to be increased over the conventional value of about 13% in /sup 12/C and 22% in /sup 40/Ca and /sup 56/Fe.

48955 **(UCRL—97269) Nuclear stopping and energy deposition into the central rapidity region.** Zingman, J.A. (Lawrence Livermore National Lab., CA (USA)). 3 Aug 1987. Contract W-7405-ENG-48. 12p. (CONF-870543—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014345.

From 2. workshop on experiments and detectors for relativistic heavy ion collider; Berkeley, CA, USA (25 May 1987).

Nuclear stopping and energy deposition into the central rapidity region of ultrarelativistic heavy-ion collisions are studied through the application of a model incorporating hydrodynamic baryon flow coupled to a self-consistent field calculated in the flux tube model. Ultrarelativistic heavy ion collisions are modeled in which the nuclei have passed through each other and as a result are charged and heated.

48956 **(UCRL—97270) Relativistic nuclear fluid dynamics and VUU kinetic theory.** Molitoris, J.J.; Hahn, D.; Alonso, C.; Collazo, I.; D'Alessandris, P.; McAbee, T.; Wilson, J.; Zingman, J. (Lawrence Livermore National Lab., CA (USA); Muhlenberg Coll., Allentown, PA (USA). Dept. of Physics). 24 Aug 1987. Contract W-7405-ENG-48. 19p. (CONF-870543—6). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014352.

From 2. workshop on experiments and detectors for relativistic heavy ion collider; Berkeley, CA, USA (25 May 1987).

Relativistic kinetic theory may be used to understand hot dense hadronic matter. We address the questions of collective flow and pion production in a 3 D relativistic fluid dynamic model and in the VUU microscopic theory. The GSI/LBL collective flow and pion data point to a stiff equation of state. The effect of the nuclear equation of state on the thermodynamic parameters is discussed. The properties of dense hot hadronic matter are studied in Au + Au collisions from 0.1 to 10 GeV/nucleon. 22 refs., 5 figs.

48957 **Transfer reactions at high energy and ambiguities in heavy-ion potentials.** Horen, D.J.; Fernandes, A.A.G.; Satchler, G.R.; Burks, B.L.; Auble, R.L.; Bertrand, F.E.; Gross, E.E.; Hensley, D.C.; Sayer, R.O.; Shapira, D. (Oak Ridge National Lab., TN, USA). *Zeitschrift fuer Physik A: Atomic Nuclei;* **328**: No. 2, 189-193(Oct 1987). Contract AC05-84OR21400.

The smaller impact parameters that contribute to transfer reactions between heavy ions at high energies make them more sensitive to different types of optical potentials than is the case at lower energies. This may allow one to distinguish between potentials that otherwise generate similar elastic scattering cross sections within the limited angular region over which typical elastic data are available. We cite as evidence results for nucleon transfers induced by / sup 18/O+/sup 28/Si at 352 MeV which rule out surface transparent potentials.

48958 **Abundance and systematics of nuclear superdeformed states; relation to the pseudospin and pseudo-SU(3) symmetries.** Dudek, J.; Nazarewicz, W.; Szymanski, Z.; Leander, G.A. (Centre de Recherches Nucleaires et Universite Louis Pasteur, F-67037 Strasbourg Cedex, France). *Physical Review Letters;* **59**: No. 13, 1405-1408(28 Sep 1987).

Results of a multidimensional (β_2, γ, β_4, ω, Z, and N) search for nuclear superdeformed configurations are presented. Calculations based on a realistic deformed average field give a relatively strong dependence of the "super" elongation on the particle number. This dependence is shown to be a cyclic function of the particle number. It originates from the pseudospin and pseudo-SU(3) symmetries which are obeyed approximately in a realistic average field.

48959 **Pion double charge exchange and the nuclear shell model.** Auerbach, N.; Gibbs, W.R.; Piasetzky, E. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **59**: No. 10, 1076-1079(7 Sep 1987).

The theory of analog pion double charge exchange on semimagic even-even nuclei is examined from the point of view of the nuclear shell model. It is shown that the amplitude for the reaction can be expressed as the sum of two independent functions for an entire shell. A more general relation is also discussed which is true for any shell in which the generalized seniority scheme is valid.

48960 **Excitation of the isovector giant dipole by α-particle scattering.** Shlomo, S.; Youngblood, D.H.; Udagawa, T.; Tamura, T. (Cyclotron Institute, Texas A&M University, College Station, Texas 77840). *Physical Review Letters;* **59**: No. 9, 1054-1054(31 Aug 1987).

A Comment on the Letter by R. J. Peterson, Phys. Rev. Lett. 57, 1550 (1986).

48961 **Anomalous two-neutron transfer cross sections at large separation in heavy ion reactions.** Juutinen, S.; Liu, X.T.; Soerensen, S.; Cox, B.; Kincaid, R.W.; Bingham, C.R.; Guidry, M.W.; Kernan, W.J.; Wu, C.Y.; Vogt, E. (Tennessee Univ., Knoxville, USA. Dept. of Physics; Oak Ridge National Lab., TN, USA). *Physics Letters [Section] B;* **192**: No. 3/4, 307-311(2 Jul 1987). Contract AC05-84OR21400;AS05-76ER04936.

It is shown that the average radial slope of two-particle transfer form factors for very heavy ion collisions is considerably smaller than expected. It is also demonstrated that this effect is not due to intrinsic excitation of reaction fragments, and that the average behavior masks a critical dependence of the slope on the angular momentum of the states excited in the transfer reaction.

48962 **Octupole shapes and shape changes at high spins in Ra and Th nuclei.** Nazarewicz, W.; Leander, G.A.; Dudek, J. (Joint Inst. for Heavy-Ion Research, Oak Ridge, TN, USA; UNISOR, Oak Ridge, TN, USA; Oak Ridge Associated Universities, Inc., TN, USA; Strasbourg-1 Univ., 67, France. Centre de Recherches Nucleaires). *Nuclear Physics [Section] A;* **467**: No. 3, 437-460(8 Jun 1987). Contract AS05-76ER04936;AC05-84OR21400;AC05-76OR00033.

The shapes of rotating Ra and Th nuclei ($130 \leqq N \leqq 138$) are calculated using the cranking model. The lightest isotopes have spherical ground states, but develop octupole and quadrupole deformations under rotation which remain up to very high spins. The ground states of the heavier isotopes have octupole and quadrupole deformations which persist up to intermediately high spins (I = 14-24 Planck constant). At higher spins, a transition is predicted to take place along the yrast line to shapes with similar quadrupole but no octupole deformation component.

48963 Nucleon-nucleon force from a chiral Lagrangian with omega-stabilization. Erell, A.; Eisenberg, J.M.; Silbar, R.R. (Raymond and Beverly Sackler Faculty of Exact Sciences, Tel Aviv University, 69978 Tel Aviv, Israel). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 70-71(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

Several authors have previously found that the usual Skyrme model, when applied to the nucleon-nucleon force problem, does not supply intermediate-range attraction. This serious deficiency is here overcome using a chiral-soliton model in which stabilization is provided by an omega meson in interaction with the soliton rather than by a term in the fourth power of the soliton derivative.

48964 Microscopic approaches to NN-bar annihilation potentials. Myhrer, F. (University of South Carolina, Columbia, SC 29208). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 96-107(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

The chiral quark models have given us a reasonable description of nucleons as a quark core surrounded by a meson cloud. When we scatter two nucleons we expect the large impact parameers to be dominated by meson exchanges. For nucleon-antinucleon scattering the same description is expected. However, for small impact parameters when the quark cores overlap, we expect annihilation to dominate. Therefore a study of the annihilation processes should give us information about the quark core in a nucleon. An attempt to calculate an NN-bar annihilation optical potential using chiral quark model properties will be discussed and we will show that the proton r.m.s. radius constrains the effective annihilation potential for NN-bar scattering.

48965 Experiments on eta-meson production. Peng, J.C. (Los Alamos National Laboratory, Los Alamos, NM 87545). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 255-270(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

Following a review of some highlights of eta-meson characteristics, the status of eta-meson production experiments is reviewed. The physics motivations and first results of two LAMPF experiments on (π, eta) reactions are discussed. Possible future experiments are also discussed.

48966 ^{5}He: hadrons or quarks. Gibson, B.F. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, NM 87545). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 390-391(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

An understanding of the lambda-He-5 hypernucleus in terms of standard nuclear models, i.e., mesons and nucleons, has been very successful. However, a description of this hypernucleus in terms of quarks and gluons is not yet complete.

48967 K^+ as a probe of partial deconfinement in nuclei. Siegel, P.B.; Gibbs, W.R.; Kaufmann, W.B. (Arizona State University and Los Alamos National Laboratory). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 396-397(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

S-wave phase shifts and positive-kaon scattering are discussed in term of a possible means in which to study the EMC effect.

48968 Model dependence of $pp \rightarrow np\pi^+$ spin observables. Silbar, R.R.; Tjon, J.A.; van Faassen, E.E.; Dubach, J.; Kloet, W.M. (Los Alamos National Laboratory, Los Alamos, NM 87545). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 398-399(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

Two unitary models are used to calculate the spin observables in nuclei nucleon reactions.

48969 Nuclear wave functions for three particle states. Singham, M.K. (Los Alamos National Laboratory (MP-DO/T-5) Los Alamos, NM 87575). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 400-401(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

Calculation of reduced density matrix elements for the transition between two nuclear states is discussed. Calculation of the reduced matrix elements by way of standard shell model methods is compared with a parameterized fitting procedure which begins with the nuclear wave functions in order to overcome any inherent inconsistencies.

48970 Relativistic impulse approximation for nuclear inelastic scattering. Shepard, J.R. (University of Colorado, Boulder, CO 80309). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 48-68(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

The Relativistic Impulse Approximation (RIA) for proton-nucleus elastic and inelastic scattering is contrasted with its non-relativistic counterpart (the NRIA). Differences between the two approaches are examined with special emphasis on the nuclear convection current and its generalizations which may show signatures of strong relativistic nuclear potentials. A simple extension of the RIA to meson-nucleus scattering based on the linear, spin-zero Duffin-Kemmer wave equation is considered.

48971 Energy dependence of the relativistic effects in the Dirac-equation-based models of scattering of nucleons from nuclei. Bleszynski, E.; Bleszynski, M.; Jaroszewicz, J. (Physics Department, UCLA, Los Angeles, California 90024). *AIP (American Institute of Physics) Conference Proceedings;* **133**: No. 1, 378-379(15 Sep 1985). (CONF-8503120—).

From Hadronic probes and nuclear interactions conference; Tempe, AZ, USA (11 Mar 1985).

An attempt to identify the aspects of the relativistic scattering theory which are responsible for the successful description of nucleon-nuclei scattering data is presented. Nucleon interactions in nuclei, a dependence on the energy of the incident particle, and Glauber theory are represented in this discussion.

Electron (proton) trajectory equations are obtained for various electric-field and magentic-field configurations. These trajectory equations provide the basis for calculating self-stripping, which was proposed as an important beam-attenuation process. The average relative electron-beam energy is calculated to determine the beam energy and configuration dependence of the stripping process. Results for beam attenuation due to electron beam stripping are obtained for the zero-field model and space charge field model. Proton beam stripping was shown to be negligible. Attenuation versus distance graphs are presented for various magnetic field angles and relevant beam parameters such as beam energy, beam intensity, and beam radius.

48973 (CONF-871004—1) US-Japan Cooperative Program on neutron scattering. Wilkinson, M.K.; Blume, M.; Stevens, D.K.; Iizumi, M.; Yamada, Y. (Oak Ridge National Lab., TN (USA); Brookhaven National Lab., Upton, NY (USA); USDOE, Washington, DC; Japan Atomic Energy Research Inst., Tokai, Ibaraki; Tokyo Univ. (Japan). Inst. for Solid State Physics). 1987. Contract AC05-84OR21400. 13p. (IAEA-SM—300/050). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014563.

From International conference on the utilization of multipurpose research reactors and related international co-operation; Grenoble, France (19 Oct 1987).

The US-Japan Cooperative Program on Neutron Scattering was implemented through arrangements by the United States Department of Energy with the Science and Technology Agency (STA) and the Ministry of Science, Education, and Culture (Monbusho) of Japan. It involves research collaboration in neutron scattering by Japanese scientists with scientists at Oak Ridge National Laboratory (ORNL) and Brookhaven National Laboratory (BNL) and the construction of new neutron scattering equipment at both laboratories with funds provided by the Japanese government. The United States provides neutrons in exchange for the new equipment, and other costs of the program are equally shared by the two countries. The assignments of Japanese scientists to ORNL and BNL vary in length, but they correspond to about two person years annually at each laboratory. An equal number of US scientists also participate in the research program. The main research collaboration is centered around the new equipment provided by the Japanese, but other facilities are utilized when they are needed. The new equipment includes a new type of wide-angle diffractometer and equipment for maintaining extreme sample environments at ORNL and a sophisticated polarized-beam triple-axis spectrometer at BNL. 13 refs., 3 figs.

48974 (CONF-871101—24) Neutron slowing down and transport in an infinite medium: 1, Generalized age-theory and its range of validity. Cacuci, D.G. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011664.

From Joint meeting of the American Nuclear Society and the Atomic Industrial Forum; Los Angeles, CA, USA (15 Nov 1987).

This paper presents a new analytical expression for the scalar flux in an infinite homogeneous medium. This expression is called Generalized Age-Theory. The expression for R(A) - the (mass dependent) range of validity of this Generalized Age-Theory - has also been determined.

48975 (CONF-871101—25) Neutron slowing down and transport in an infinite medium: 2, The scalar flux at large distances/small lethargies. Cacuci, D.G. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011665.

From Joint meeting of the American Nuclear Society and the Atomic Industrial Forum; Los Angeles, CA, USA (15 Nov 1987).

A companion paper has presented a Generalized Age-Theory expression for the scalar flux PSI$_0$/sup G/(x,u) due to a plane isotropic source emitting neutrons in an infinite medium with cross sections that are constant in energy. The range of validity for this Generalized Age-Theory expression has also been determined as $p = x/(2u) \leq R(A)$, where R(A), the range of validity, is a function of the scatterer's mass. The purpose of this paper is to present the expression for the scalar flux Psi$_0$/sup G/(x,u) in the complementary region in phase-space, i.e., where $p > R(A)$.

48976 (CONF-871101—33) ANSL-V: ENDF/B-V based multigroup cross-section libraries for Advanced Neutron Source (ANS) reactor studies. Ford, W.E. III; Arwood, J.W.; Greene, N.M.; Petrie, L.M.; Primm, R.T. III; Waddell, M.W.; Webster, C.C.; Westfall, R.M.; Wright, R.Q. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011675.

From Joint meeting of the American Nuclear Society and the Atomic Industrial Forum; Los Angeles, CA, USA (15 Nov 1987).

Multigroup P3 neutron, P0-P3 secondary gamma ray production (SGRP), and P6 gamma ray interaction (GRI) cross section libraries have been generated to support design work on the Advanced Neutron Source (ANS) reactor. The libraries, designated ANSL-V (Advanced Neutron Source Cross-Section Libraries), are data bases in a format suitable for subsequent generation of problem dependent cross sections. The ANSL-V libraries are available on magnetic tape from the Radiation Shielding Information Center at Oak Ridge National Laboratory.

48977 (IFVE-ORI—85-8) Simulating neutron, photon and charged particle trajectories in geometric-computer systems. Maslov, M.A.; Mokhov, N.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703247.

The interative-step method is proposed to construct three-dimensional hadron, electron and photon trajectories. Algorithms of simulating multiple Coulomb scattering of charged particles and external magnetic field action are given. The geometrical module RAY-REGION for solution of the three-dimensional problem of hadron and muon transport in an arbitrary three-dimensional geometry is described. 11 refs.

48978 Range-energy relation for Au ions, E/A≦150 MeV. Heckman, H.H.; Bowman, H.R.; Karant, Y.J.; Rasmussen, J.O.; Warwick, A.I.; Xu, Z.Z. (Nuclear Science Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3654-3668(15 Oct 1987). Contract AC03-76SF00098.

The range-energy (RE) relations for Au ions in CH and Au in the energy interval $10 \leq E/A \leq 150$ MeV are reported. Bevalac beams of Au/sup 61+/, Au/sup 35+/, and Au/sup 11+/ at E/A = 50 MeV were used to investigate the dependence of dE/dx, hence effective charge z/sup */, of Au ions in matter as a function of target material and initial charge of incident Au ions. The essential finding of this experiment is that the measured ranges of the Au ions are typically within 2% of those predicted by the Barkas-Berger RE relation. The experimental RE relations for Au in CH and Au can also be reproduced with equal precision by assuming that dE/dx is given by the product of the rate of energy loss for protons and an empirically derived expression for z/sup */^{2}, each quantity being dependent on the target material, via the adjusted ionization potential I/sub adj/ and the velocity β of the ion.

48979 Diffusion in a periodic Lorentz gas. Moran, B.; Hoover, W.G.; Bestiale, S. (Lawrence Livermore National Laboratory, and Department of Applied Science, University of California at Davis-Livermore, Livermore, California 94550). *Journal of Statistical Physics;* **48**: No. 2, 709-726(Aug 1987). Contract W-7405-ENG-48.

We use a constant "driving force" F/sub d/ together with a Gaussian thermostatting "constraint force" F/sub c/ to simulate a nonequilibrium steady-state current (particle velocity) in periodic, two-dimensional, classical Lorentz gas. The ratio of the average particle velocity to the driving force (field strength) is the Lorentz-gas conductivity. A regular "Galton-board" lattice of fixed particles is arranged in a dense triangular-lattice structure. The moving scatterer particle travels through the lattice at constant kinetic energy, making elastic hard-disk collisions with the fixed particles. At low field strengths the nonequilibrium conductivity is statistically indistinguishable from the equilibrium Green—Kubo estimate of Machta and Zwanzig. The low-field conductivity varies smoothly, but in a complicated way, with field strength. For moderate fields the conductivity generally decreases nearly linearly with field, but is nearly discontinuous at certain values where interesting stable cycles of collisions occur. As the field is increased, the phase-space probability density drops in apparent fractal dimensionality from 3 to 1. We compare the nonlinear conductivity with similar zero-density results from the two-particle Boltzmann equation. We also tabulate the variation of the kinetic pressure as a function of the field strength.

48980 (IFVE-ORI—85-5) Specific kerma equivalent for photons and neutrons up to 20 MeV. Alekseev, A.G.; Golovchik, V.T.; Savinskij, A.K. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703246.

Specific kerma equivalent, specific Kerma and quality factor have been calculated for photons and neutrons in the photon energy range from 0.1 KeV to 20 MeV and the neutron energy range from thermal neutron energies up to 20 MeV. The latest recomendation of the tissue composition, the LET data for charged particles and more recent cross-sections data for photon and neutron reactions induced in tissue have been used. This information can be used to estimate the radiation dose equivalent and for the interpretation of the tissue-equivalent equidosemeter energy responses. 20 refs.; 7 figs.; 1 tab.

48986 (SIS—1986:2) Radiological diagnostic examinations in Norway - 1983. Saxeboel, G. (Statens Inst. for Straalehygiene, Oslo (Norway)). 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752517.

In 1983 the frequency of medical X-ray examinations in Norway has been reported to 641.3 examinations per 1000 inhabitants. Geographical variations are presented as well as the relative frequency of approximately 70 different examinations.

48987 (SIS—1987:2) Radiation hygiene analysis of medical activities in Norway. Development of an analytical tool. Lundgren, L.; Olerud, H.; Saxeboel, G. (Statens Inst. for Straalehygiene, Oslo (Norway)). 1987. 67p. (In Norwegian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87752518.

A status report from the project Radiation hygiene analysis of medical activities in Norway is presented. A principal project description as well as the main purpose of the project are presented. The report gives information on methods and strategy in connection with patient dose measurements and instrument calibration. The main task of the report is to present and explain the development of an analytical tool based on computer programs. At present, five different programs are produced, linked together in a menusystem. The programs deal with registration of observed variables, compute aritmetic mean/median values, make statistics,and plot and calculate integrated doses from X-ray examinations of interest. So far approximately 2200 X-ray examinations have been observed, each limited to 24 observation variables. The potential power of the analytical tool is demonstrated for the barium meal examination. The analysis indicates a mean integrated energy of 229 mJ per examination, while the annual collective dose from these examinations is 200 manSv in Norway. Discussion of facts relevant to optimization clearly shows that the use of 100 mm technique should be encouraged. 18 refs.

48990 Incorporation of Monte Carlo electron interface studies into photon general cavity theory. Horowitz, Y.S.; Moscovitch, M.; Mack, J.M.; Hsu, H.; Kearsley, E. (Ben-Gurion Univ. of the Negev, Beersheba, Israel; Los Alamos National Lab., NM; Dept. of the Navy, Bethseda, MD). *Radiation Protection Dosimetry;* **17**: No. 1-4, 437-441(1986). (CONF-860806—).

From 8. international conference on solid state dosimetry; Oxford, UK (26 Aug 1986).

Electron Monte Carlo calculations using CYLTRAN and a new PHSECE (photon produced secondary electrons) technique were carried out to estimate electron fluences and energy deposition profiles near LiF/Al and LiF/Pb material interfaces undergoing ^{60}Co irradiation. Several interesting and new features emerge: (i) Although the build-up of the secondary electron fluences at the interfaces of the irradiated media is approximately exponential, the value of the electron mass fluence build-up coefficient, γ, is not equal to the electron mass fluence attenuation coefficient, β. (ii) the β value of the attenuation of the gamma generated electron

fluences at the cavity-medium interfaces is strongly dependent on the Z of the adjacent material. (iii) For LiF/Pb there is a significant intrusion energy deposition mode arising from side-scattering in the wall (Pb) material. These new features of interface dosimetry (at least (i) and (ii)) are incorporated into photon general cavity theory and compared with experimental data.

Our research activities during 1987 were directed toward the formulation and implementation of new theoretical methods and computational algorithms and their application in studies of materials phenomena of fundamental and technological interests. These research efforts resulted in several papers which were submitted and accepted by scientific journals and conference presentations. In the following we highlight certain of our research activities, include some of the written reports, and a list of publications, to date. Included topics are: The Mechanism, Kinetics and Dynamics of Silicon Crystal Growth, Simulations of Amorphous Silicon, Dynamics of Tip Substrate Interactions in Atomic Force Microscopy, Dynamics and Excitations in Coupled Quantum-Classical Systems, and The Physics of Small Clusters.

48993 **(DOE/ER/60415—3) Vacuum ultraviolet electronic properties of liquids: Annual progress report, February 1, 1987-January 31, 1988.** Painter, L.R. (Tennessee Univ., Knoxville (USA). Dept. of Physics and Astronomy). Sep 1987. Contract FG05-86ER60415. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000165.

This paper contains a progress report on experiments done on the electronic properties of liquids in the far ultraviolet region. Topics discussed in this report are: a new scanning-tunneling microscope, photoemission phenomenon from liquids, ionic doping, and surface charging in liquids. (LSP)

48997 **(LA-UR—87-2618) New theory for competing interactions and microstructures in partially-ordered (liquid-crystalline) phases.** Dowell, F. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 8p. (CONF-8705168—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014739.

From Workshop on competing interactions and microstructures: statics and dynamics; Los Alamos, NM, USA (5 May 1987).

A summary of results from a unique statistical-physics theory to predict and explain competing interactions and resulting microstructures in some partially-ordered [in this case, liquid-crystalline (LC)] phases is presented. The static aspects of both partial orientational and partial positional ordering of the molecules into various microstructures in these phases (including the incommensurate smectic-Ad phase) can be understood in terms of various competing interactions (both entropic and energetic) involved in the packing together of the different molecular sub-units at given pressures and temperatures. These microstructures are predicted and explained (using no ad hoc or arbitrarily adjustable parameter) as a function of molecule chemical structure [including lengths and shapes (from bond lengths and angles), intramolecular rotations, site-site polarizabilities and pair potentials, dipole moments, etc]. Theoretical results are presented for the nematic, re-entrant nematic, smectic-Ad, and smectic-Al LC phases and the isotropic phase.

48998 **(LA-UR—87-2722) Applications of a theory of ferromagnetic hysteresis.** Hodgdon, M.L. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 25p. (CONF-870806—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014725.

From 6. conference on the computation of electromagnetic fields; Graz, Austria (25 Aug 1987).

The differential equation $dB/dt = \alpha$ absolute value of dH/dt [f(H) - B] + dH/dt g(H) and a set of restrictions on the material functions f and g yield a theory of rate independent hysteresis for isoperm ferromagnetic materials. A modification based on exchanging the positions of B and H in the differential equation and on allowing for the dependence of the material functions on dH/dt extends the theory to rate dependent, nonisoperm materials. The theory and its extension exhibit all of the important features of ferromagnetic hysteresis, including the existence and stability of minor loops. Both are well suited for use in numerical field solving codes. Examples in which the material functions are simple combinations of analytic functions are presented here for Mn-Zn ferrite, Permalloy, CMD5005, and CoCr thin film. Also presented is a procedure for constructing a two dimensional vector model that yields bell-shaped and M-shaped curves for graphs of the angular variation of the coercive field.

48999 **(LA-UR—87-2921) Birch's law and the properties of high temperature fluid metals.** Shaner, J.W. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 7p. (CONF-8708131—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014744.

From EHPRG conference; Potsdam, German D.R. (25 Aug 1987).

By comparing acoustic velocities in fluid metals over a very wide range of densities we have established Birch's Law as an approximate representation over the entire liquid range. For a given liquid metal the acoustic velocity is close to linear in density, with a slope determined by the atomic weight. The measurements include isobaric expansion to less than half normal density, ultrasonics on molten metals at 1 atmosphere, and shock-melted metals to greater than twice normal density. We also find unusual behavior of the Gruneisen gamma, which can be explained in terms of simple fluid models. 15 refs.

49000 **(UCRL—97264) Electron capture from solids by positrons.** Howell, R. (Lawrence Livermore National Lab., CA (USA)). Aug 1987. Contract W-7405-ENG-48. 9p. (CONF-870731—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014355.

From 4. international workshop on positrons in gases; London, UK (16 Jul 1987).

The capture of electrons in solids is modified from that in gasses by several factors. The most important is the collective interaction of the electrons which results in a density of electron states in the solid in wide bands. Also the high density of electrons in many solids gives a high frequency of interaction as compared to gasses, and quickly destroys any electron-positron states in the metal matrix. Consequently, most positrons implanted in a metal will rapidly thermalize, and unless they reach the surface will annihilate with an electron in an uncorrelated state. Positronium formation from positrons scattered at a metal surface is analogous to ion neutralization however, most of the positronium comes from positrons passing through the surface from the bulk. The dominant motivation for studying positronium formation has been the hope that the distribution of the electrons at the surface would be obtained through the annihilation properties of positrons trapped at the surface or through analysis of the energy and angular distributions of the positronium emitted into the vacuum. These distributions have been measured and are included in this paper. 17 refs.

49001 **Relativistic screened orbital radii.** Zhang, S.B.; Cohen, M.L.; Phillips, J.C. (Department of Physics, University of California, Berkeley, California 94720). *Physical Review* [*Section*] *B: Condensed Matter;* **36**: No. 11, 5861-5867(15 Oct 1987).

We have computed first-principles atomic nodal radii and Zunger-Cohen radii including relativistic corrections. It is shown that typical relativistic corrections are about 10% for the s orbitals and about 5% for the p orbitals for the Au row. These are important for the construction of structure maps with intermetallic compounds. Other applications of orbital radii are proposed and discussed.

49002 **Dynamics of dense lattices.** Rosenau, P. (Department of Mechanical Engineering, Technion-Israel Institute of Technology, Haifa, 32000, Israel). *Physical Review* [*Section*] *B: Condensed Matter;* **36**: No. 11, 5868-5876(15 Oct 1987).

We derive the equations governing the nonlinear dynamics of one-, two-, and three-dimensional lattices in a close to continuum condition (i.e., a dense lattice). The described method correctly captures all terms to a given order in discreteness and, unlike previous approaches, leads to well-behaved partial-differential equations for these problems. In general, the dispersion born out of discreteness counteracts the steepening of waves caused by the nonlinearity and leads to the formation of permanent nonlinear structures.

49003 **Hypervelocity-impact phenomena via molecular dynamics.** Holian, B.L. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *A: General Physics;* **36**: No. 8, 3943-3946(15 Oct 1987).

Novel molecular-dynamics calculations have been carried out for a hypervelocity impact of a sphere of 683 atoms (a central atom surrounded by 23 coordination shells) hitting a rectangular plate composed of 8000 atoms (five close-packed planes thick). The ratio of the sphere diameter to the plate thickness was chosen to be approximately 2.4, with the velocity of the sphere chosen such that its kinetic energy was roughly 25 times its binding energy, relative to the bottom of the potential well. Under these conditions, the debris cloud generated by the ball after it penetrates the wall is composed mostly of vaporized material. These microscopic results scale hydrodynamically to macroscopic experiments of a lead sphere hitting a lead plate at u/sub p/ = 6.6 km/s. There are striking similarities between these atomistic calculations and continuum hydrodynamics simulations, as well as notable differences.

49004 **Observation of elastic scattering of positrons and electrons at glancing incidence.** Mayer, R.; Zhang, C.S.; Lynn, K.G.; Throwe, J.; Marcus, P.M.; Gidley, D.W.; Jona, F. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *B: Condensed Matter;* **36**: No. 10, 5659-5662(1 Oct 1987).

Elastic intensity versus energy (I-V) spectra have been observed using both positrons and electrons scattered at glancing incidence (83°—56° with respect to the surface normal) in the energy range of 50—450 eV from a variety of metallic and alkali-metal-halide surfaces. Unlike the electron spectra under the same conditions, all glancing-angle positron I-V spectra have broad (≧100 eV) features. The enhanced broadening is associated with the reduced penetration depth of the elastically scattered positrons. Peak positions and widths fit a quasikinematic calculation of the intensity for Cu(100).

49005 **IPNS Rietveld analysis software package for time-of-flight powder diffraction data: recent developments.** Rotella, F.J.; Richardson, J.W. (Argonne National Lab., IL; Univ. of Chicago, IL). pp 27-36 of Workshop on neutron scattering data analysis 1986. Proceedings of a meeting held at the Rutherford Appleton Laboratory, Chilton, 13-14 March, 1986. Johnson, M.W. Bristol, England; Institute of Physics Publishing Ltd. (1986). (CONF-8603150—).

From Workshop on neutron scattering data analysis; Oxford, UK (13 Mar 1986).

The paper concerns recent developments in the system of computer programs used at the Intense Pulsed Neutron Source, Argonne National Laboratory, U.S.A., for the analysis of time-of-flight neutron diffraction data via the Rietveld method. These developments include: multiple phase Rietveld analysis, anisotropic strain broadening of diffraction peaks, anharmonic thermal vibrations, and removal of non-crystalline scattering via fourier-filtering.

49006 **Analysis of inelastic neutron scattering spectra from a time-of-flight spectrometer with filter detector.** Vorderwisch, P.; Mezei, F.; Eckert, J.; Goldstone, J.A. (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H., Germany, F.R.; Los Alamos National Lab., NM). pp 161-168 of Workshop on neutron scattering data analysis 1986. Proceedings of a meeting held at the Rutherford Appleton Laboratory, Chilton, 13-14 March, 1986. Johnson, M.W. Bristol, England; Institute of Physics Publishing Ltd. (1986). (CONF-8603150—).

From Workshop on neutron scattering data analysis; Oxford, UK (13 Mar 1986).

Inelastic neutron scattering spectra obtained from time-of-flight spectrometers with filter detector, suffer in energy resolution from a long time-of-flight tail in the filter response function. A mathematical method is described which removes this tail in measured spectra. The energy resolution can thereby be adapted for each part of the spectrum. Applications of the method to data taken at the Neutron Scattering Centre Los Alamos pulsed spallation source are presented.

From 18. conference on low temperature physics; Kyoto, Japan (20 Aug 1987).

Polarized and unpolarized neutron scattering measurements on both the Ce and U based heavy fermion systems have provided a great deal of evidence for the formation of a coherent state involving the f-electrons at low temperature. These experiments are reviewed, and common features of the low temperature magnetic correlations are discussed. 42 refs., 1 fig.

49008 **(CONF-8709124—1-Draft) The itinerant resonating-valence-bond model for superconductivity.** Liu, S.H. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 27p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014794.

From Symposium on low temperature physics; Hsin-chu, Taiwan (7 Sep 1987).

It has been proposed by Anderson that the pairing interaction in high temperature superconductors La/sub 2-x/ Sr/sub x/ CuO_4 and Yba_2Cu_3O/sub 7-x/ is magnetic in origin, and the recent discovery of antiferromagnetic ordering in La_2CuO_4 has been regarded as strong evidence in support of this so-called resonating-valence-bond (RVB) model. Close examination of the ordered state of this material reveals that it is an itinerant antiferromagnet. Accordingly, the superconducting properties must also be studied using the itinerant model approach, rather than the local moment model discussed so far in literature. This paper reports an approximate solution of the itinerant RVB model of superconductivity. It is shown that superconductivity can take place in a narrow region of the parameter space, and that the fluctuating local exchange field causes the superconducting state to be gapless. 19 refs.

49009 **(DOE/ER/45268—1) Studies of heavy fermion systems: Progress report, July 1, 1986-December 31, 1987.** Stewart, G.R. (Florida Univ., Gainesville (USA). Dept. of Physics). Aug 1987. Contract FG05-86ER45268. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014902.

Studies of the resistivity, susceptibility, and specific heat of the new heavy fermion system UPt/sub 5-x/Au/sub x/ have shown: (1) the high effective mass, m*, can be varied by almost an order of magnitude by varying x near x = 1; and (2) the occurrence of high m* in this system and (presumably) in heavy fermion systems in general is typified by a nearness to magnetic instability. High field (24 T) specific heat studies of $CeCu_6$ show a total suppression of the low temperature heavy fermion ground state by magnetic field, in direct contradiction of present non-interacting "Kondo lattice" theory.

This progress report summarizes the principal accomplishments dealing with perturbation and characterization of nonlinear processes. Topics of research include Lyapunov equations, mutual information and metric entropy, the dimensions, complex dynamics and transition sequences and spatial patterns. (LSP)

49011 **(DOE/ER/40200—108) Families of Bose rays in quantum optics.** Mukunda, N.; Sudarshan, E.C.G.; Simon, R. (Texas Univ., Austin (USA). Center for Particle Theory; Indian Inst. of Science, Bangalore; Institute of Mathematical Sciences, Madras (India)). Jul 1987. Contract FG05-85ER40200. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014584.

Having known classical wave optics and wave mechanics, is it possible to reverse Schroedinger's path and extend the concept of families of rays of light to provide a new exact rendering of quantum optics including the Bose nature of photons? This question is answered in the affirmative, and the implications of the Bose symmetry for certain nonlocal correlations of the many ray distribution functions are worked out. The similarities and the differences between classical and quantum wave optics are brought out. The ray-ray Bose correlation is analyzed. The generating functional for the many ray distribution functions is formulated; and the notion of paraxial illumination for quantum optics is made precise.

49012 (DOE/ER/60420—1, pp 21-32) **Systematic construction of upper and lower bounds to the ground state energy of the Schroedinger equation.** Bessis, D.; Handy, C.R. (Georgia Institute of Technology, Atlanta). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

For the multidimensional Schroedinger equation, they develop a technique based on the moment problem formulation of this equation. The method provides systematic and rapidly converging upper and lower bounds to the ground state energy, and it enjoys the following features: (1) The bounds are insensitive to the strength of the perturbation; that is, the method applies even to the most singular perturbation. (2) The method does not require the potential to be semibounded. It applies directly to potentials whose spectrum extends from minus to plus infinity, as is the case for the Zeeman effect in hydrogenic atoms. (3) The presence of continuum spectrum does not affect the method: no information coming from the continuum is needed. 1 figure.

49013 (DOE/ER/60420—1, pp 33-43) **Numerical solution of the Schroedinger equation with a polynomial potential.** Campoy, G.; Palma, A. (Universidad de Sonora, Hermosillo, Mexico). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

A numerical method for solving the Schroedinger equation for a potential expressed as a polynomial is proposed. The basic assumption relies on the asymptotic properties of the solution of this equation. It is possible to obtain the energies and the stationary state functions simultaneously. They analyze, in particular, the cases of the quartic anharmonic oscillator and a hydrogen atom perturbed by a quadratic term, obtaining its energy eigenvalues for some values of the perturbation parameter. Together with the Hellmann-Feynman theorem, they use their algorithm to calculate expectation values of x^n for arbitrary positive values of n. 4 tables.

49014 (DOE/ER/60420—1, pp 65-72) **Lower bounds to ground state eigenvalues of the Schroedinger equation via optimized inner projection: application to quartic and sextic anharmonic oscillators.** Cizek, J.; Vrscay, E.R. (Univ. of Waterloo, Ontario). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Inner projection combined with bracketing techniques represents a very powerful method of calculating lower bounds to eigenvalues of the Schroedinger equation. The Hamiltonian is expressed as a sum of an unperturbed operator (whose eigenvalue equation is soluble) and a perturbed operator that should be positive definite. For small values of the coupling constant, the conventional splitting of the Hamiltonian is adequate. For strong coupling, however, it is advantageous to partition the Hamiltonian in an optimized fashion, accomplished by an appropriate scaling of the space coordinates and momenta. This optimized inner projection (OIP) method yields remarkably good results for all values of the coupling constant, even for manifolds of minimal dimensionality.

49015 (DOE/ER/60420—1, pp 73-80) **R matrix: its relation to Titchmarsh-Weyl theory and its complex rotated analogue.** Elander, N.; Krylstedt, P.; Braendas, E.; Engdahl, E. (Research Institute of Physics, Stockholm, Sweden). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The R matrix theory in its simplest form is discussed and analyzed in terms of the classical Titchmarsh-Weyl's theory for a singular second order differential equation. It is observed that the R matrix described as an abstract R operator is contained in the framework of Weyls classical extension to an infinite interval of finite Sturm-Liuoville theory. As a result they find that the exterior complex rotation method can be synthesized with the R matrix theory to obtain a method for deriving the S matrix poles out in the complex energy or momentum planes.

49016 (DOE/ER/60420—1, pp 81-94) **Lewis structures and Feynman diagrams: the treatment of geminal correlation in Fock space.** England, W.B.; Sorensen, T.E.; Silver, D.M. (Univ. of Wisconsin, Milwaukee). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Lipkin's method is used to rigorously transpose field-theoretic, self-consistent descriptions of Cooper pairs and Bose condensation to Lewis structures and resonance. The effective one-body equations can be simplified according to models of valence. The resultant self-consistent problem may require not much more work than the Hartee-Fock problem. The effort required for MBPT remains comparable to the Hartree-Fock case.

49017 (DOE/ER/60420—1, pp 95-107) **Solvable model with an extreme AGP ground state: relationships among fermion pairs, pairons, and natural spin geminals.** Larson, E.G. (Brigham Young Univ., Provo, UT). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

A model many-fermion Hamiltonian is presented for which the ground state is asymptotically an Antisymmetrized Geminal Powers (AGP) wave function with largest possible greatest eigenvalue for its two-particle reduced density matrix. Closed analytical expressions and plane-wave expansions are presented for the generating geminal of the AGP ground state and for its one-particle reduced density matrix. The natural orbitals for this generating geminal are plane waves. The generating geminal shows intensely local character in its intracule and corresponds to the formation of a quasi-boson from two fermions. One may appropriately modify this generating geminal to introduce zero occupation numbers of its one-particle reduced density matrix and to make all the nonzero occupation numbers of its one-particle reduced density matrix equal, thus making this geminal a generator of an extreme AGP wave function, with an extreme large eigenvalue for its two-particle reduced density matrix. Closed analytical expressions are also given for this modified geminal and for its one-particle reduced density matrix. The similarities and differences of the features of this model and the accepted models of the superconducting ground state of electrons in metals, and the superfluid ground state of liquid He^4 are mentioned.

49018 (DOE/ER/60420—1, pp 109-117) **Momentum space approach to the relativistic atomic structure calculations.** Baretty, R.; Ishikawa, Y.; Nieves, J.F. (Univ. of Puerto Rico, Rio Piedras). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

A simple and straightforward derivation of the relativistic no-pair equation in momentum space is given for hydrogenic species. This is achieved by starting with a QED Hamiltonian in momentum representation and making a rigorous reduction into a system that contains a single electron but no positrons. The integral equation was solved for a series of hydrogenic systems using the Kwon-Tabakin-Lande technique. Numerical results were compared with those recently obtained by Hess, who employed the basis set expansion technique to solve the no-pair equation in configuration space.

49019 (DOE/ER/60420—1, pp 119-127) **Method of complex scaling.** Braendas, E. (Univ. of Uppsala, Sweden). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The method of complex scaling is taken to include bound states, resonances, remaining scattering background and interference. Particular points of the general complex coordinate formulation are presented. It is shown that care must be exercised to avoid paradoxical situations resulting from inadequate definitions of operator domains. A new resonance localization theorem is presented.

49020 (DOE/ER/60420—1, pp 129-146) **Complex scaling method: application to autoionization, predissociation, and multiphoton resonances.** Chu, S. (Univ. of Kansas, Lawrence). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Several recent extensions of the method of complex scaling to the studies of autoionization, predissociation, and multiphoton dynamics will be presented. Specific subjects to be discussed include: (1) Complex-coordinate coupled-Landau-channel method for autoionizing resonances and photoionization of atomic hydrogen in intense magnetic fields, (2) Non-Hermitian complex quasi-energy method for multiphoton dissociation of small molecules with specific application to two-photon dissociation of vibrationally excited H_3^+ and HD^+, and (3) Vibrational predissociation of highly vibrationally excited He-I_2^* (nu) van der Waals molecules.

49021 (DOE/ER/60420—1, pp 147-151) **Sum-rules in resonance calculations with complex coordinates.** Winkler, P. (Univ. of Nevada, Reno). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Simple sum-rules that arise in connection with infinitesimal transformations have been set up and studied with respect to their use in assessing the quality of resonance calculations for cases in which no independent information on the metastable state is available.

49022 (DOE/ER/60420—1, pp 153-171) **Chemical graph-theoretic cluster expansions.** Klein, D.J. (Texas A & M Univ., Galveston). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

A general computationally amenable chemico-graph-theoretic cluster expansion method is suggested as a paradigm for incorporation of chemical structure concepts in a systematic manner. The cluster expansion approach is presented in a formalism general enough to cover a variety of empirical, semiempirical, and even ab initio applications. Formally such approaches for the utilization of chemical structure-related concepts may be viewed as discrete analogues of Taylor series expansions. The efficacy of the chemical structure concepts then is simply bound up in the rate of convergence of the cluster expansions. In many empirical applications, e.g., boiling points, chromatographic separation coefficients, and biological activities, this rate of convergence has been observed to be quite rapid. More note will be made here of quantum chemical applications. Relations to questions concerning size extensivity of energies and size consistency of wave functions are addressed.

49023 (DOE/ER/60420—1, pp 173-183) **Identification numbers for chemical structures.** Szymanski, K.; Mueller, W.R.; Knop, J.V.; Trinajstic, N. (Univ. of Duesseldorf, West Germany). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Several identification (ID) numbers for chemical structures (connectivity ID number, prime ID number, weighted ID number) are analyzed and tested until a counterexample (a pair of structures with the same ID number) is found. The analysis is carried out for acyclic structures with up to 20 atoms, trees with up to 20 points, benzenoid graphs and polyhexes with up to 10 hexagons, and all connected graphs with up to 6 points. Although all the (chemical) ID numbers studied are highly selective for many families of (molecular) graphs, none of them are unique; in all three cases the counterexamples are found. However, the greatest discriminative power is shown by the weighted ID number.

49024 (DOE/ER/60420—1, pp 471-481) **Gaussian wave-packet dynamics.** Arickx, F.; Broeckhove, J.; Coene, W.; Van Leuven, P. (Univ. of Antwerp, Belgium). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The time-dependent variational principle is applied to the manifold of Gaussian wave packets. The translational and spreading degrees of freedom are treated equally. Comparison is made with frozen Gaussian dynamics and with the exact Schroedinger dynamics.

49025 (DOE/ER/60420—1, pp 541-546) **Multichannel resonance optimization with an optical potential.** Garcia-Sucre, M.; Lefebvre, R. (Universite de Paris-Sud, Orsay, France). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The introduction of an appropriately chosen imaginary potential in the physical asymptotic region may transform a resonance wave function into an integrable function. They examine the conditions under which this procedure and the method of exterior complex scaling become equivalent. The procedure is tested in multichannel situations describing rotational predissociation of a van der Waals complex and Stark ionization of the hydrogen atom.

49026 (DOE/ER/60420—1, pp 585-601) **Polarization propagator analysis of through-space spin-spin coupling constants: ^{19}F-^{19}F couplings.** Ruiz de Azua, M.C.; Diz, A.C.; Giribet, C.G.; Contreras, R.H.; Rae, I.D. (Univ. de Buenos Aires, Argentina). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The through-space transmission of ^{19}F-^{19}F couplings is analyzed in a model compound employing inner projections of the polarization propagator, at the RPA and monoexcited CI levels, using an INDO ground state wave function. The emphasis of this work is (1) to study the dependence of the through-space transmitted component of such couplings on the interatomic F-F distance, and (2) to obtain an intuitive, although rigorous, model to describe the through-space transmission that could be used as a complementary tool in experimental measurements. In the first case an exponential decay is found and experimental data for different compounds are found to fit this curve fairly well. In the second case, localized molecular orbitals representing chemical functions are plotted, and the way in which they influence the through-space transmission is analyzed at the perturbator level as well as in inner projected polarization propagator terms. The important role played by the anti-bonding orbitals and the lone pairs of the F atoms is discussed.

49027 (DOE/ER/60420—1, pp 743-748) **Comments on the method of complex scaling to find physical resonance states.** Loewdin, P.O. (Univ. of Florida, Gainesville). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Some basic features of the method of complex scaling are briefly reviewed. This method is associated with a similarity transformation anti $H = UHU^{-1}$, in which the many-particle Hamiltonian H loses its self-adjoint character. In connection with the eigenvalue problems for anti H and H, one has formally the relations anti Psi = U Psi and anti E = E. However, since the proper boundary conditions have to be satisfied, the spectrum {anti E} may still be subject to change: even if some eigenvalues are persistent (anti E = E), others may be lost, and new eigenvalues may occur also in the complex plane. It is pointed out that these changes are related to the fact that the dilatation operator U is an unbounded operator, and that the eigenfunctions involved are transformed not only within the ordinary L^2 Hilbert space, but also out of and into this space. Reference to a more complete treatment is given.

49028 (DOE/ER/60420—1, pp 767-768) **Formulation of the Hohenberg-Kohn-Sham theory.** Keller, J. (Universidad Nacional Autonoma de Mexico). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The formal structure of density functional theory should include a third theorem stating that: the internal symmetry of the system, through a set of parameters {c/sub i,N/}, is a necessary part of the theory. The variational equations should read $\delta E[rho;\{c/sub\ i,N/\}] = 0$, and the parameters C/sub i,N/ included either in the construction of the density function (as in the Kohn-Sham procedure) or in the energy functional itself.

49029 (DOE/ER/60420—1, pp 769-771) **Remarks about the wave-function representability of the first-order reduced density matrices.** Loewdin, P.O. (Univ. of Florida, Gainesville). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

It is pointed out that, if {Gamma/sub y/} is the set of Nth-order density matrices associated with a given first-order reduced density matrix $y = y(x_1/x'_1)$, then y is wave-function representable, if and only if there is at least one Gamma/sub y/ for which one has $\mu = Tr(Gamma/sub\ y/ - Gamma/sub\ y/^2) = 0$.

49030 (DOE/ER/60420—1, pp 773-785) **Collisional time-correlation functions for molecular interactions.** Micha, D.A. (Univ. of Florida, Gainesville). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

Collisional time-correlation functions (TCFS) combine methods of scattering theory and of many-body theory to describe the interaction of projectiles with complex targets. In recent work, they have developed the theory of collisional TCFS for molecular interactions using multiple scattering expansions, semiclassical approximations and operator algebras. The theory has been applied to atomic collisions with molecules, to calculate cross sections and compare them with experiment.

49031 **(IFVE-OTF—86-42) Quantum theory of string in the four-dimensional space-time.** Pron'ko, G.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703253.

Submitted to the journal Theor. Math. Phys. .

The Lorentz invariant quantum theory of string is constructed in four-dimensional space-time. Unlike the traditional approach

whose result was breaking of Lorentz invariance, our method is based on the usage of other variables for description of string configurations. The method of an auxiliary spectral problem for periodic potentials is the main tool in construction of these new variables. 12 refs.

49032 **(IFVE-OTF—86-138) New notions about space-time and gravitation.** Logunov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703259.

Critical analysis of the general theory of relativity (GTR) is briefly described. Acceptance of its conception is shown to lead to dropping a series of fundamental physical representations being the basis for physics. Firstly, it is giving up from the conservation laws of energy-momentum and angular momentum of matter and gravitational field all together. Secondly, it is giving up from the representation of the gravitational field as a classical one of the Faraday-Maxwell type with density of energy-momentum. 14 refs.

49033 (INIS-SU—415, pp 37-47) **Open quantum system of two coupled harmonic oscillators.** Sandulescu, A.; Scutaru, H.; Scheid, W. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Theoretical Physics; Institutul Central de Fizica, Bucharest, Romania; Giessen Univ., Germany, F.R. Inst. fuer Theoretische Physik). 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87780178. (N—18-86).

In JINR rapid communications. Collection.

On the basis of the Lindblad theory for open quantum systems master equations for a system consisting of two harmonic oscillators are derived. The time dependence of expectation values, Wigner function and Weyl operator are obtained and discussed. The chosen system can be applied for the description of the charge and mass asymmetry degrees of freedom in deep inelastic collisions in nuclear physics. 7 refs.

49034 **(INIS-SU—415) JINR rapid communications. Collection.** (Joint Inst. for Nuclear Research, Dubna (USSR)). 1986. 66p. (N—18-86). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780178.

49035 **(INS—565) Microscopic theory of dynamical subspace for large amplitude collective motion.** Sakata, Fumihiko; Marumori, Toshio; Ogura, Masanori. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jan 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702911.

A full quantum theory appropriate for describing large amplitude collective motion is proposed by exploiting the basic idea of the semi-classical theory so far developed within the time-depedent Hartree-Fock theory. A central problem of the quantum theory is how to determine an optimal representation called a dynamical representation specific for the collective subspace where the large amplitude collective motion is replicated as precisely as possible. As an extension of the semi-classical theory where the concept of an approximate integral surface played an important role, the collective subspace is properly characterized by introducing a concept of an approximate invariant subspace of the Hamiltonian.

49036 **(INS—591) Connections between Schwinger terms and anomalies.** Tomiya, Mitsuyoshi. (Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study). Jun 1986. 57p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87702917.

We present examples of a new type of Schwinger terms appearing in commutators of energy-momentum tensor. We demonstrate them in two-dimensional flat Minkowski space. The Schwinger terms which correspond to gravitational anomaly appear in different places from those of conformal anomaly. Nevertheless, they still preserve the Jacobi identity. We also discuss the relation between anomalies and the Schwinger terms. In any-dimensional curved space-time Faddeev's cohomological technique works well. Therefore we can derive the Schwinger terms in curved space-time.

49037 **(JINR-R—2-86-571) Separation of variables in the Hylleraas equation.** Vinitskij, S.I.; Sisakyan, A.N.; Pogosyan, G.S.; Ter-Antonyan, V.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703321.

The Hylleraas equation is found for a hydrogen atom in an arbitrary-dimensional momentum space. Solutions are obtained for the discrete spectrum of the one- and two-dimensional Hylleraas equation. It is shown that the coefficients realizing expansions of polar and bipolar bases of a two-dimensional hydrogen atom are expressed in terms of the Wigner D-functions of angles $\pi/2$. 6 references.

49038 **(JINR-R—4-86-244) Asymptotics of the effective potentials and wave functions of a three-body problem in suitable coordinates.** Vinitskij, S.I.; Kadomtsev, M.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703323.

Submitted to the journal J. Phys. B: Lett. to the Editor.

An equivalent operator removing degeneration in a layer with the principal quantum number n is recognised for the two-center Coulomb problem in suitable coordinates at large distances between the centres. Averaging of the total Hamiltonian over the correct zero-order adiabatic functions allows one to write down the asymptotic system of equations. The solution of this system of equations is found that is compatible with the physical boundary conditions of the scattering problem. 7 references.

49039 **(JINR-R—4-86-439) Adiabatic representation of a three-body problem in the limit of separated atom in natural coordinates.** Vinitskij, S.I.; Vukajlovich, F.R.; Kadomtsev, M.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 19p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703324.

Submitted to the journal J. Phys.

For the two-center problem in the limit of separated atoms an equivalent operator Λ-vector is found removing the Coulomb degeneracy in the second order of perturbation theory. Eigenvalues and eigenfunctions of the operator Λ-vector allow to construct a complete classification of states of the two-center problem in suitable coordinates, a compatible adiabatic basic (CAB). Averaging of the total Hamiltonian of a three-body problem over the CAB in a system of adiabatic equations in slow variable R the hyperradius of the three-body problem. It is shown that the asymptotics of that system of equations is compatible with the physical boundary conditions of the scattering problem. 25 references, 2 figures, 1 table.

49040 **(LA-UR—87-2851) Light scattering by oriented and randomly dispersed chiral particles.** Singham, S.B. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 11p. (CONF-8706199—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014758.

From CRDEC scientific conference on obscuration and aerosol research; Aberdeen, MD, USA (1 Jun 1987).

The use of coupled dipoles in modelling light scattering by oriented and randomly dispersed chiral particles is examined in this paper. The chirality considered here is form chirality which results from macroscopic structural mirror asymmetry in the particle. For a chiral particle described by spherical dipoles, it is shown that large magnitude terms that contribute the chiral matrix elements of an oriented particle do not contribute at all in the orientation average. This result will be used in future work to obtain a more efficient method of evaluating light scattering by randomly dispersed chiral particles.

49041 **(OUP—87-16) Harmonic oscillator at finite temperature using path integrals.** Larsen, Aa.; Ravndal, F. (Oslo Univ. (Norway). Fysisk Inst.). May 1987. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752524.

The statistical mechanics of a quantum harmonic oscillator can easily be formulated in terms of Feynman path integrals in imaginary time. By straightforward integrations one finds the parti-

tion function, the internal energy and correlation functions. When time is discretized, the same results can be obtained directly using Monte Carlo methods on a computer. In the zero temperature limit one recovers the usual quantum mechanical results.

49042 **(RRK—86-42) On the gravitational instability in an infinite homogeneous medium.** Nariai, Hidekazu. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Oct 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703042.

In the Research Note dated on June 4th in 1956, I worked out the gravitational instability in an infinite homogeneous medium, as an extension of Jeans' original work in the case where the medium is of a finite viscosity and a nonvanishing heat conductivity. The contents seem to be of a physical meaning even at the present epoch, so that I will reproduce them.

49043 **(RRK—86-44) On some higher-dimensional space-times.** Nariai, Hidekazu. (Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics). Oct 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703044.

In 1985, I and Ishihara considered an extension of de Sitter and Nariai's solutions of R/sub $\mu\nu$/ = Λg/sub $\mu\nu$/ in a higher dimensional spacetime. This is a sequel to the above paper in the case where the 6-dimensional space-time consists of 4-dimensional isotropic homogeneous space and two-dimensional space with Kantowski-Sach's form. It is shown that the vacuum equations admit such a solution that the 4-dimensional space is 3 famous forms of the de Sitter space-time and the 2-dimensional one is Nariai's static form.

49044 **Second-quantized molecular time scale generalized Langevin equation theory and the quantum oscillator.** McDowell, H.K. (CLS-2 MS G738, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **87**: No. 8, 4859-4864(15 Oct 1987).

The short-time Gaussian approximation to the molecular time scale generalized Langevin equation (MTGLE) friction kernel is introduced and used to compute the time dependence of a fluctuation time correlation function. The fluctuations are shown to have two time scales, namely, the dissipation time scale and a quantum time scale given by exp[-2πkTt/h-dash-bar]. Absorption and emission spectral functions for a quantum oscillator coupled to a bath are derived with no approximations made. The second-quantized MTGLE approach is applied to the problem of a quantum oscillator coupled linearly to a bath of quantum oscillators. The method is shown to be consistent with previous work and to provide a systematic methodology to examine more general many-body boson problems.

49045 **Multiplex advantage in Hadamard transform spectrometry utilizing solid-state encoding masks with uniform, bistable optical transmission defects.** Tilotta, D.C.; Hammaker, R.M.; Fateley, W.G. (Kansas State University, Chemistry Department, Manhattan, Kansas 66506). *Applied Optics;* **26**: No. 19, 4285-4292(1 Oct 1987).

The effect of a uniform bistable optical transmission defect in the encoding mask on the multiplex efficiency is investigated for solid-state Hadamard transform spectrometry with thermal detection. It is demonstrated that encoding masks which possess nonideal optical transmission properties, i.e., bistable transmission defects, need not impare the multiplex capability provided a sufficient number of resolution elements are multiplexed. Application to the SNR of a general algorithm for the calculation of the average mean square error in the estimate of the spectrum shows that reasonable SNR improvements can be expected when compared to conventional dispersive instruments.

49046 **Crisis in the Belousov—Zhabotinskii reaction: Experiment and simulation.** Richetti, P.; De Kepper, P.; Roux, J.C.; Swinney, H.L. (Centre de Recherche Paul Pascal, Universite de Bordeaux-I, 33405 Talence Cedex, France). *Journal of Statistical Physics;* **48**: No. 3, 977-990(Sep 1987).

An abrupt transition that has the character of an interior crisis was observed in an experiment on the Belousov—Zhabotinskii reaction as a control parameter was varied (a crisis is a qualitative change in the dynamics of a system observed when an attractor collides with the stable manifold of a fixed point). The interpretation of the observed behavior as a crisis is corroborated by a numerical analysis of a seven-variable model of the reaction. The waveforms, attractors, and maps obtained in the simulation are remarkably similar to those obtained in the laboratory experiment. The simulation indicates that the crisis is a consequence of a multivalued first return map.

49047 **Self-consistent equations for variable velocity three-dimensional inverse scattering.** Rose, J.H.; Cheney, M. (Center for NDE, Iowa State University, Ames, Iowa 50011). *Physical Review Letters;* **59**: No. 9, 954-957(31 Aug 1987).

This paper considers the three-dimensional inverse scattering problem for the wave equation with variable velocity. A possible solution is presented in terms of equations whose self-consistent solution determines the velocity from scattering data. These self-consistent equations are (1) the wave equation in integral form, (2) a linear integral equation which relates the wave field and scattering data, and (3) a novel formula for the velocity in terms of the wave field.

49048 **Measurement of longitudinal coherence lengths in particle beams.** Bernstein, H.J.; Low, F.E. (School of Natural Science, Hampshire College, Amherst, Massachusetts 01002). *Physical Review Letters;* **59**: No. 9, 951-953(31 Aug 1987).

We point out that, on very general grounds, experiments with directionally collimated beams (of neutrons or other particles) incident on passive targets cannot distinguish between their coherent wave-packet structure and the incoherent mixing due, for example, to multiple emitters or to interactions with other particles in the source.

49049 **Periodic trajectories for a two-dimensional nonintegrable Hamiltonian.** Baranger, M.; Davies, K.T.R. (Center for Theoretical Physics, Laboratory for Nuclear Science, and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Annals of Physics (New York);* **177**: No. 2, 330-358(1 Aug 1987).

A numerical study is made of the classical periodic trajectories for the two-dimensional nonintegrable Hamiltonian H = 1/2(p^2/sub x/+p^2/sub y/)+(y-1/2x^2)^2+0.05 x^3. In addition to x—y pictures of the trajectories, E—tau (energy—period) plots of the periodic families are presented. Efforts have been ade to include all trajectories with short periods and all simple branchings of these trajectories. The monodromy matrix has been calculated in all cases, and from it the stability properties are derived. The topology of the E—tau plot has been explored, with the following results. One family may have several stable regions. The plot is not completely connected; there are islands. The plot is not a tree; there are cycles. There are isochronous branchings, period-doublings, and period-multiplyings of higher orders, and examples of each of these are presented. There is often more than one branch issuing from a branch point. Some general empirical rules are inferred. In particular, the existence of isochronous branching is seen to be a consequence of the symmetry of the Hamiltonian. All these results agree with the general classification of possible branchings derived in Ref. [10]. (M. A. M. de Aguiar, C. P. Malta, M. Baranger, and K. T. R. Davies, in preparation). Finally, some nonperiodic trajectories are calculated to illustrate the fact that stable periodic trajectories lie in "regular" regions of phase space, while unstable ones lie in "chaotic" regions.

49050 **Hard-sphere heat conductivity via nonequilibrium molecular dynamics.** Kratky, K.W.; Hoover, W.G. (Institut fuer Experimentalphysik, Universitaet Wien, A-1090 Wien, Austria). *Journal of Statistical Physics;* **48**: No. 2, 873-900(Aug 1987).

We use an Evans—Gillan driving force F/sup //sup d/, together with isokinetic and isoenergetic constraint forces F/sup //sup c/, to drive steady heat currents in periodic systems of 4 and 32 hard spheres. The additional driving and constraint forces produce

curved trajectories as well as additional streaming and collisional contributions to the momentum and energy fluxes. Here we develop an analytic treatment of the collisions so that the simulation becomes approximately ten times faster than our previous numerical treatment. At low field strengths λ, for λσ less than 0.4, where σ is the hard-sphere diameter, the 32-sphere conductivity is consistent with Alder, Gass, and Wainwright's 108-sphere value. At higher field strengths the conductivity varies roughly as λ/sup 1/2/, in parallel with the logarithmic dependence found previously for three hard disks.

49051 **Gravitational field with toroidal topology.** Stewart, B.W.; Witten, L.; Papadopoulos, D. (Univ. of Cincinnati, OH). *General Relativity and Gravitation;* **19**: No. 8, 827-839(Aug 1987). Contract FG02-84ER40153.

The Weyl formalism for static, axially symmetric solutions to Einstein's equations is employed to examine solutions of Einstein's equations with toroidal topology. They investigate a particular family of solutions that contain the Schwarzschild, Curzon, Bach-Weyl, and γ metric (also known as the Zipoy-Voorhees metric) as special cases.

49052 **Cosmological textures.** Davis, R.L. (Stanford Univ., CA). *General Relativity and Gravitation;* **19**: No. 4, 331-337(Apr 1987). Contract AC03-76SF00515.

The notions of phase transition and causality, combined with the standard cosmological model, lead to the appearance of topological defects in the early universe. The most familiar types of defects are solitons, strings, and domain walls. Another type can exist when the spatial universe is compact. When these appear the whole universe takes on a winding number, and the consequences are quite amusing; for example, it is possible that a closed universe can mimic open or flat universes. Another possibility is that the vacuum has a nonabelian magnetic field strength at all points in the universe.

49053 **Feeble forces and gravity.** Bars, I.; Visser, M. (Univ. of Southern California, Los Angeles). *General Relativity and Gravitation;* **19**: No. 3, 219-223(Mar 1987). Contract FG03-84ER40168.

The authors develop a scenario in which feeble intermediate range forces emerge as an effect resulting from the compactification (a la Kaluza-Klein) of multidimensional theories. These feeble forces compete with gravity and in general permit different bodies to fall to earth with different accelerations. They show that these feeble forces are mediated by vectors (V) and/or scalars (S), whose dimensionless coupling constants are typically of order g/sub v/ ≈ g/sub s/ ≈ 10^{-20}. Under certain plausible assumptions the ranges of these feeble forces are expected to be of order 1 m to 1 km. It is conjectured that the general strategy will prove applicable to realistic multidimensional theories such as the 10-dimensional superstring theories. They speculate that deviations from the standard gravitational force - similar to the ones reported recently as a fifth force - may be interpreted as evidence for higher dimensions.

A Nuclear Performance Analysis Group was formed to develop the nuclear technology mission of TIBER-II under the leadership of Argonne National Laboratory reporting to LLNL with major participation by the University of California - Los Angeles (test requirements, R & D needs, water-cooled test modules, neutronic tests). Additional key support was provided by GA Technologies (helium-cooled test modules), Hanford Engineering Development Laboratory (material-irradiation tests), Sandia National Laboratory - Albuquerque (high-heat-flux component tests), and the Idaho National Engineering Laboratory (safety tests). Support also was provided by Rennselaer Polytechnic Institute, Grumman Aerospace Corporation, and the Canadian Fusion Fuels Technology Program. This report discusses these areas and provides a schedule for their completion.

49057 **(CONF-8710140—1) Feasibility study of an infrared interferometer/polarimeter system for CIT [Compact Ignition Tokamak].** Ma, C.H.; Hutchinson, D.P. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 4p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014945.

From 3. international symposium on laser-aided plasma diagnostics; Los Angeles, CA, USA (28 Oct 1987).

The results of a feasibility study of a two-dimensional infrared interferometer/polarimeter system for measurements of electron density and plasma current profiles in the Compact Ignition Tokamak (CIT) are presented. A preliminary design of the system is discussed.

49058 **(DOE/ER/53212—110) Interchange stability of noncircular reversed field pinches.** Skinner, D.A.; Prager, S.C.; Todd, A.M.M. (Wisconsin Univ., Madison (USA). Plasma Physics Research). Aug 1987. Contract FG02-85ER53212. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000177.

Interchange (Mercier) stability of toroidal reversed-field-pinch plasmas with noncircular cross-section is evaluated numerically. Marginally stable pressure profiles and beta values are produced. Most shapes, such as indented or vertically elongated, reduce stability by making the net magnetic curvature of the poloidal-field-dominated plasmas yet worse than that of the circle. Horizontally elongated plasmas slightly enhance stability beyond that of the circle as a result of increased shear produced by toroidicity. Such shear enhancement by the toroidal shift of magnetic surfaces might be exploited for future, more comprehensive studies.

49059 **(DOE/ET/53017—81) Field-reversing electron and ion rings for the confinement and heating of plasmas: Annual progress report for the period September 1, 1986-August 31, 1987.** Fleischmann, H.H. (Cornell Univ., Ithaca, NY (USA)). 1 Sep 1987. Contract AC02-76ET53017. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014669.

This paper updates experiments being done on the confinement and heating of plasma at Cornell University. Such experiments discussed are: megavolt ion coil experiment, the MERGE experiment on the merging of plasma and electron rings, precessional stabilization of rings in resistive walls, and theoretical investigation on ion-ring equilibria. (LSP)

49060 **(DOE/ET/53088—296) Saturation of Kelvin-Helmholtz fluctuations in a sheared magnetic field.** Scott, B.D.; Terry, P.W.; Diamond, P.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Aug 1987. Contract FG05-80ET53088. 46p. (IFSR—296). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000276.

Kelvin-Helmholtz unstable flows are numerically investigated in the context of a sheared E x B flow profile and a sheared magnetic field in the collisional, electrostatic limit. In the extreme form of this limit, density fluctuations are small, and the system is described by the nonlinear E x B vorticity dynamics. In order to focus on the role of magnetic shear localization, the computations are confined to two dimensions. For weak magnetic shear the fluctuations become turbulent and saturate by nonlinear cascade to small (dissipative) scales. In a strong magnetic shear regime near the linear stability boundary, nonlinear spatial broadening allows direct access to resistive shear dissipation, leading to saturation at small amplitude with nearly all the fluctuation energy in the longest-wavelength mode. This is in accordance with previous investigation using a statistical closure analysis. The amount of broadening is proportional to the linear growth rate. The fluctuation amplitude scaling with magnetic shear is found to agree closely with the theory.

49061 **(DOE/ET/53088—297) On tokamak equilibrium.** Hazeltine, R.D.; Montgomery, M.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Aug 1987. Contract FG05-80ET53088. 21p. (IFSR—297). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014811.

Large aspect-ratio tokamak equilibrium is studied, including effects, such as ellipticity of the flux surfaces, of second order in the inverse aspect ratio. To facilitate the interpretation of experimental data, the analysis uses simple coordinates that are readily evaluated, rather than coordinates based on the exact flux surfaces. An explicit formula for the safety factor, including second order terms, is presented, along with a brief discussion of rotational effects.

49062 **(EUR-CEA-FC—1281) Kinetic equation for a magnetized plasma.** Ghendrih, P.; Misguich, J.H. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Jul 1986. 106p. NTIS (US Sales Only), PC A06/MF A01. File Number DE87752592.

The effect of the magnetic field on the collision operator of a two-species hot plasma is described without approximation on the strength of the field. The motivation consists to describe microscopic relaxation processes in the intermediate range of values of the field, as can be found in Tokamak plasmas. From the Klimontovich equation, the generalization of the Landau equation is derived by taking into account both the effects of the magnetic field and those of the space non-homogeneity. The original technique used is based on the propagator formalism and on a systematical use of the rotation matrices describing the Larmor rotation of the particles. Simpler explicit results are also given for the cases of (i) a homogeneous two-species plasma, and of (ii) a non-homogeneous single-species plasma. In analogy with cosmic ray turbulent diffusion, a singular contribution is found for collisions between particles with the same velocity parallel to the magnetic field. The previously-known limit results for infinite and vanishing field are unable to describe the results obtained here for intermediate values of the strength of the field, where non-negligible effects are expected on transport coefficients.

49063 **(EUR-CEA-FC—1309) General approach to the computation of local transport coefficients with finite Larmor effects in the collision contribution.** Ghendrih, P. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Oct 1986. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87752593.

We expand the distribution functions on a basis of Hermite functions and obtain a general scheme to compute the local transport coefficients. The magnetic field dependence due to finite Larmor radius effects during the collision process is taken into account.

49064 **(EUR-CEA-FC—1310) Cross effects on electron-cyclotron and lower-hybrid current drive in tokamak plasmas.** Fidone, I.; Giruzzi, G.; Krivenski, V.; Mazzucato, E.; Ziebell, L.F. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Nov 1986. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752594.

Electron cyclotron resonance current drive in a tokamak plasma in the presence of a lower hybrid tail is investigated using a 2D Fokker-Planck code. For an extraordinary mode at oblique propagation and down-shifted frequency it is shown that the efficiency of electron cyclotron current drive becomes, i) substantially greater than the corresponding efficiency of a Maxwellian plasma at the same bulk temperature, ii) equal or greater than that of the lower hybrid waves, iii) comparable with the efficiency of a Maxwellian plasma at much higher temperature. This enhancement results from a beneficial cross-effect of the two waves on the formation of the current carrying electron tail. (5 fig; 17 refs).

49065 **(EUR-CEA-FC—1313) Hyperfrequency reflectometry for determination of electron density and its fluctuations on Petula-B tokamak.** Bottollier-Curtet, H. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Nov 1986. 185p. (In French). NTIS (US Sales Only), PC A09/MF A01. File Number DE87752596.

The physical principle of reflectometry is shown in dealing with wave propagation and reflection in an inhomogeneous and anisotropic plasma and in clarifying electron density profile and density fluctuation measurement. Then the experimental device made of three different micro-wave circuits is described together with solutions brought according to each circuit to optimize them. Experimental results are given, and particularly the first whole electron density profile of a tokamak which has been got by reflectrometry. Sine-cosine analysis of MHD fluctuations which allow the density fluctuation localisation in the plasma. Result discussion is about propagation wave in plasma as much as about numerical processes or experimental cautions. Comparative study is made between ordinary wave mode reflectometry and extraordinary one. This will allow a configuration proposition of reflectometer for Tore Supra. (54 figs; 30 refs).

49066 **(IAE—4214/7) Mathematical models of plasma discharge control in a tokamak.** Andreev, V.F.; Dnestrovskij, Yu.N.; Kostomarov, D.P.; Popov, A.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87702891.

A model for program description of discharge development in a tokamak is considered and the problem of optimal control of poloidal fields and total current in plasma is determined. A comparison of the formulated problem solution methods is performed. A "quasi-optimal" control model is proposed, allowing one to take account of real power supplies. Analysis of the control task stability and correctness is conducted. The numerical code for otimal control task solution is developed and the method is described. Different operation modes of the T-15 device are calculated using the developed code. 11 refs.; 10 figs.

49067 **(INIS-mf—10687) On the theory of the electrical field and the plasma rotation in the stellarator.** Coronado-Gallardo, M. (Technische Univ. Muenchen, Garching (Germany, F.R.). Fakultaet fuer Physik). 23 Jul 1984. 61p. (In German). NTIS (US Sales Only), PC A04/MF A01. File Number DE87752782.

In the context of neoclassical transport theory, the macroscopic torque equations for several liquids in toroidal plasmas are used with general geometry. In order to examine plasma rotation and the electrical field in equilibrium and the effect of sources of particles and pulses, the continuity and pulse balance equations are dealt with. In order to use them on the WVII-A stellarator in the Max Planck Institute for Plasma Physics, existing formulae are ex-

panded and the viscosity tensor is calculated in the CGL form in the plateau range. General expressions for plasma speed, electrical field, plasma diffusion and current are obtained, in which the effect of the sources occurs explicitly. The theory is applied to the WVII-A stellarator, in which neutral particle injection represents one pulse source.

49068 (INIS-SU—409, pp 17-19) **Measurement of plasma current induced by relativistic electron beam.** Bondar', Yu.F.; Mkheidze, G.P.; Savin, A.A. (AN SSSR, Moscow. Inst. Obshchej Fiziki). 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780002.

The results of experimental investigation of plasma current induced in the course of the injection of high-current relativistic electron beam (REB) into neutral gas are presented. The technique by means of which one succeeded in measuring directly the induced current and determining its distribution by plasma channel cross section is described. The results obtained show that the dynamics of plasma currents induced in the course of REB injection into gas is the complex process of selfconsistent interactions of beam induced fields plasma channel conductivity etc. 2 refs.; 2 figs.

49069 (INIS-SU—409, pp 5-6) **Self-oscillation regime of directional velocity relaxation of electron flux.** Vedenin, P.V.; Ignatov, A.M. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780002.

Kratkie Soobshcheniya po Fizike.; (no.10).

In Experimental and theoretical physics. Collection.

On the base of a new method of numerical solution of the Vlasov equation evolution of complete function of electron distribution at the injection of hot electron beams into plasma bounded with electrodes is investigated. It is shown that despite the development of electrostatic instabilities in the system the currents can run substantially exceeding the Pierce critical current. 5 refs.; 3 figs.

49075 (IPPJ—762) **Lectures on topics in magnetic reconnection and transport in fusion devices.** Kulsrud, R.M. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jan 1986. 66p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87702931.

Magnetic reconnection is of considerable importance for the confinement of plasma in fusion devices. In these lectures, three topics in which magnetic reconnection plays an important role. The first is the formation of magnetic islands in the magnetostatic equilibrium for the systems of imperfect symmetry. Magnetic reconnection occurs during the evoluation of the equilibrium. The second concerns the additional breakup of magnetic surfaces due to nonideal instability such as resistive modes or drift waves. The third is the tearing modes which are actually observed to break up magnetic surfaces and to form islands. An approximate treatment of an equilibrium that has islands indicates that the tearing mode is indeed unstable when it is expected to be. The objective of another lecture is to give an intuitive picture of the particle motion that leads to so-called ripple transport in stellarators and other nonaxisymmetric geometries such as heliotrons and torsatrons. There is the possibility of a simple intuitive discussion of stellarator transport, and though this intuitive treatment is not as accurate as the transport calculation in tokamaks, it is adquate to form an idea as to the importance of ripple transport for Stellarator confinement. (Kako, I.).

49076 (IPPJ—771) **Sustaining a steady-state field-reversed configuration.** Okamoto, Masao. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Mar 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702932.

A method is considered to sustain the steady-state field-reversed configuration by driving the bootstrap current. A consistent steady-state solution is obtained within a framework of one dimensional one-fluid equations including equilibrium. It is found that the amount of seed current necessary to induce the bootstrap current (or diamagnetic current) maintaining the steady state depends strongly on the transport and loss rate of plasma particles.

49077 (IPPJ—784) **Plasma confinement by a radio frequency plugging potential in an axisymmetric mirror-cusp device.** Kumazawa, R.; Okamura, S.; Adati, K. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jul 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702934.

RFC-XX-M is an MHD stable and axisymmetric mirror-cusp device with radio frequency (RF) plugging. The plasma is produced by ion cyclotron resonant heating (ICRH) with gas puffing at the central mirror. The total ion energy confinement time including axial loss, electron drag and charge exchange is improved by a

factor of three by the RF plugging and reaches 1 ms. The energy confinement time due to the axial particle loss is estimated to be 7.5 ms from a detailed analysis of ion energy loss channels. An RF plugging potential (psi) is measured from the energy analysis of the escaping ions. It is determined that psi is proportional to the square of an applied RF voltage and the maximum value reaches 250 V. This value agrees with a plugging potential deduced from the Pastukhov formula within a factor of 2.

49078 **(IPPJ—787) Electron density diagnostics by FE XXII line intensity ratio.** Masai, Kuniaki; Kato, Takako. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Aug 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702935.

The electron density of a tokamak plasma is obtained by measuring the ratio of the line intensities for Fe XXII 2s/sup 2/ 2p(/sup 2/P/sub 3/2/) - 2s2p/sup 2/(/sup 2/P/sub 3/2/) 114 A and 2s/sup 2/2p(/sup 2/P/sub 1/2/) - 2s2p/sup 2/(/sup 2/S/sub 1/2/) 117 A. The intensity ratio of these lines is found useful for the density diagnostics in the range 10/sup 12/ - 10/sup 15/ cm/sup -3/, on account of its weak dependence on the temperature and of the proximity of these wavelengths. Proton and deuteron impacts are important for excitation from 2s/sup 2/2p(/sup 2/P/sub 1/2/) to 2s/sup 2/2p(/sup 2/P/sub 3/2/) and the resultant intensity for 114 A.

49079 **(IPPJ—789) Volume produced H/sup -/, D/sup -/ ion source for proton accelerator and thermo-nuclear fusion research by sheet plasma, (2).** Uramoto, Joshin. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Aug 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702936.

By increasing thicknesses of multi-aperture electrodes to extract volume produced H/sup -/, D/sup -/ ions from the sheet plasma, electron currents accelerated together with H/sup -/, D/sup -/ ions, are reduced to around 10 % of the H/sup -/, D/sup -/ ion current with a current density of 20 — 30 mA/cm/sup 2/ over a large area. Accordingly, a total heat load of extraction electrodes is also reduced effectively: a power density of about 100 W/cm/sup 2/ has been obtained for a H/sup -/ ion current of 190 mA from an area of 13 cm/sup 2/ with 6 mmphi x 25 apertures (54 % transperency).

49080 **(IPPJ—791) Observations of the asymmetric power spectra of the density fluctuations in JIPP T-IIU plasma by the far-infrared laser scattering.** Nagatsu, M.; Nishida, I.; Ohnishi, H.; Tsukishima, T.; Okajima, S.; Mizuno, K.; Kawahata, K.; Tetsuka, T.; Fujita, J. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Sep 1986. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87702937.

The asymmetric power spectra of the density fluctuations in JIPP T-IIU plasma are observed by far-infrared(FIR) laser scattering using a newly developed dual homodyne detection system. The observed spectra have many common features with those observed in PLT, TFR and others by microwave scattering. The peak frequencies of the broad spectra are found to be about three times as large as those of electron diamagnetic drift evaluated from the plasma parameters. The discrepancy can be mainly accounted for by the Doppler shift due to the fluid rotation of plasma by E vector x B vector drift. In addition, low frequency MHD activities are observed simultaneously for a low poloidal wavenumber.

49081 **(IPPJ-DT—129) Concept definition of an FRC/DD-/sup 3/He advanced fusion reactor.** Okamoto, M.; Momota, H.; Nomura, Y. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Aug 1986. 38p. (In Japanese). NTIS (US Sales Only), PC A03/MF A01. File Number DE87702939.

Posibilities of advanced fusion fuel cycle reactors are investigated. Characteristics of various D - D fusion fuel cycles are clarified and which magnetic confinement method can fit the most efficient advanced fuel cycle reactor is examined. A concept definition is considered for an advanced fusion reactor with DD - /sup 3/He fuel cycle in which the plasma is confined in a field-reversed configuration or field-reversed mirror. The concept definition is developed with emphasis on the feasibility of a steady-state self-ignited DD - /sup 3/He plasma with temperatures of 100 keV, the production method, the formation of ambipolar potential in the ambient plasma and the design of plasma energy direct convertor.

49082 **(IPPJ-DT—131) Data processing with PC-9801 micro-computer for HCN laser scattering experiments.** Iwasaki, T.; Okajima, S.; Kawahata, K.; Tetsuka, T.; Fujita, J. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Sep 1986. 170p. (In Japanese). NTIS (US Sales Only), PC A08/MF A01. File Number DE87702941.

In order to process the data of HCN laser scattering experiments, a micro-computer software has been developed and applied to the measurements of density fluctuations in the JIPP T-IIU tokamak plasma. The data processing system consists of a spectrum analyzer, SM-2100A Signal Analyzer (IWATSU ELECTRIC CO., LTD.), PC-9801m3 micro-computer, a CRT-display and a dot-printer. The output signals from the spectrum analyzer are A/D converted, and stored on a mini-floppy-disk equipped to the signal analyzer. The software to process the data is composed of system-programs and several user-programs. The real time data processing is carried out for every shot of plasma at 4 minutes interval by the micro-computer connected with the signal analyzer through a GP-IB interface. The time evolutions of the frequency spectrum of the density fluctuations are displayed on the CRT attached to the micro-computer and printed out on a printer-sheet. In the case of the data processing after experiments, the data stored on the floppy-disk of the signal analyzer are read out by using a floppy-disk unit attached to the micro-computer. After computation with the user-programs, the results, such as monitored signal, frequency spectra, wave number spectra and the time evolutions of the spectrum, are displayed and printed out. In this technical report, the system, the software and the directions for use are described.

49083 **(ITEF—153-1986) Numerical solution of the problem on the structure of cylindric Z-pinch with consideration of the terms connected with thermoforce.** Gerusov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703290.

Numerical solution of the problem about cylindrically symmetric Z-pinch with consideration of the terms connected with thermoforce is realised. Detailed comparison with solution without new terms is carried out. It turns out that the terms connected with thermoforce are the most appreciably only in the skin layer. An approximate value of neon concentration at discharge in deuterium and neon mixture at maximum effect of new members on the discharge is determined. Calculations studying relative effect of different new members and calculations checking the necessity of realizing the conditions fro stability of calculations are also conducted. 2 refs.; 8 figs.

49084 **(ITEF—171-1985) Is neutron pinch formed in a plasma focus by a residual plasma? .** Sasorov, P.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703304.

It is discovered that a "residual" plasma outside current sheath in Z pinches initially having very low density affects considerably retarded stages of neck development. Probably, the whole pinch emitting neutrons (neutron pinch) consists in a residual plasma and is not shaped with skimmed current sheath as it was considered earlier. 9 refs.

49085 **(KFTI—86-12) Production of atom flows at materials evaporation by laser radiation.** Volkov, Ya.F.; Dyatlov, V.G.; Zelenin, G.V.; Kotsubanov, V.D.; Mitina, N.I.; Nikol'skij, I.K.; Pavlova, G.P. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1986. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703327.

Parameters of atom fluxes obtained by laser evaporation from the surface of a massive target are studied. Material of the target is Al and Ag. Total quantity of substance removed from the

surface of the target at the expense of laser radiation is measured by weighing. Energy distribution and quantity of evaporated atoms are determined by resonance radiation absorption. Duration of evaporation is identified by measured time characteristics of thermal radiation of the target surface. The head part of the flux comprising plasma is investigated by double probe and RF-signal absorption (λ3 cm). Optimum energy density of an evaporating pulse is shown to equal 3-4 J/cm² when using monopulse ruby laser of 3.5 J beam energy and duration of 30 ns. Quantity of evaporated substance in the flux at this energy density makes up $4x10^{16}$ and $2x10^{17}$ at. per pulse for Al and Ag respectively. At optimum energy density drops and plasma make up not more than 20 % from vapor mass. Here the energy of vapor atoms in the flux is equal to 2 eV and the head part of the flux moves at the velocity corresponding to energy of 130 eV. These requirements comply with requirements to the flux for simulation of natural inflow of impurities into plasma at the expense of sputtering and arc-formation. 13 references, 4 figures.

49086 **(KFTI—86-13) Effect of electrostatic field on behaviour of peripheric plasma at high-frequency heating.** Grigor'eva, L.L.; Smerdov, B.I.; Chechkin, V.V. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1986. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703328.

One of possible mechanisms resulting in increased separation of impurities under plasma HF heating in tokamaks and stellarators in the range of Alfven and ion cyclotron frequencies is studied. Potential guidence in limited plasma and development of particle currents in bound layers under the effect of external variable electrostatic field is considered. Consideration was carried out for two simplest models - plasma between two parallel electrodes and plasma filaments between two earthed electrodes in a longitudinal magnetic field (in the latter case experimentally). The results obtained permit to better understand polarization processes occuring under the effect of HF-electrostatic fields in complex systems. On the one hand these processes should result in removal of peripheral plasma particles on the wall of the chamber, limiters, aerial, and, on the other hand, in increased separation of impurities due to material sputtering of these details by ions accelerated in bound layers. 51 references, 5 figures.

49087 **(KFTI—86-30) Development of corpuscular-optical method for electric field measurement.** Ivanov, B.I.; Prichepov, V.P.; Kodyakov, V.M. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1986. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703334.

A local contactless method based on simultaneous probing of an investigated object by a helium metastable atom (MA) beam in the state $2s^1S_0$ and by resonance radiation flux is suggested to study electromagnetic fields in high-temperature plasma and in charged particle beams. Optical pumping and MA collapse take place in the intersection point of the beam and the flux. The electrical field (E) influences pumping by Stark effect and results in alternation of the MA that passed through the flux volume and that promoted determination of E in the point of pumping. Bench-scale test of the method is carried out. Characteristic parameters of the method are determined based on the calculations and experiments. 4 references, 4 figures.

49088 **(LA-UR—87-2746) X-ray emission from high-Z spherical laser plasmas: Implications for plasma dynamics.** Goldstone, P.D.; Cobble, J.A.; Hauer, A.; Stradling, G.; Mead, W.C.; Goldman, S.R.; Coggeshall, S.; Richardson, M.C.; Jaanimagi, P.A.; Barnouin, O. (Los Alamos National Lab., NM (USA); Rochester Univ., NY (USA). Lab. for Laser Energetics). 1987. Contract W-7405-ENG-36. 18p. (CONF-8708110—9). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014722.

From 31. SPIE annual international technical symposium on optical and optoelectronic applied science and engineering; San Diego, CA, USA (16 Aug 1987).

Conversion of 351-nm laser light to soft x-rays has been studied using spherical gold targets irradiated at 5×10^{12} - 4×10^{15} W/cm². Spectra and time histories of sub-keV and M-band emission are presented. Results have been compared to detailed models (LASNEX) to better determine the dynamics of the plasma processes which lead to x-ray emission. 10 refs.

49089 **(LA-UR—87-2830) Helicity dissipation in the plasma edge.** Nebel, R.A. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 6p. (CONF-870908—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014762.

From Course and workshop on physics of mirrors, reversed field pinches and compact tori; Varenna, Italy (1 Sep 1987).

Three dimensional MHD simulations were done to test the conjecture that the cause of the increased loop voltage observed in certain RFP experiments is helicity dissipation in the highly resistive edge plasma region. The simulations were done with a 3-D nonlinear, 0-beta resistive MHD code. The Lundquist number for the simulations was $S = 10^4$. Resistivity was increased by a factor of 100 in the edge region. (WRF)

49090 **(ORNL/TM—10363) Feasibility of alpha particle measurement in a magnetically confined plasma by CO_2 laser Thomson scattering.** Richards, R.K.; Vander Sluis, K.L.; Hutchinson, D.P. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000039.

Fusion-product alpha particles will dominate the behavior of the next generation of ignited D-T fusion reactors. Advanced diagnostics will be required to characterize the energy deposition of these fast alpha particles in the magnetically confined plasma. For small-angle coherent Thomson scattering of a CO_2 laser beam from such a plasma, a resonance in the scattered power occurs near 90° with respect to the magnetic field direction. This spatial concentration permits a simplified detection of the scattered laser power from the plasma using a heterodyne system. The signal produced by the presence of fusion-product alpha particles in an ignited plasma is calculated to be well above the noise level, which results from statistical variations of the background signal produced by scattering from free electrons. 7 refs.

49091 **(OUP—87-13) Computer simulation of the electron decay in a neon afterglow plasma.** Mentzoni, M.; Holter, Oe. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1987. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752519.

The electron/ion decay in a neon afterglow plasma has been studied by computer simulation. The model includes electron removal by ambipolar diffusion and dissociative electron-ion recombination under partly non-isothermal conditions. Experimentally the decay falls within the outer bounds of the simulation decay. It was found that the decay is very sensitive to the electron temperature dependence of the recombination coefficient.

49092 **(PPPL—2429) Boxcar photography.** Greene, G.J.; Cutsogeorge, G.; Ono, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract AC02-76CH03073. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000128.

A simple, inexpensive diagnostic has been developed for time-resolved imaging of repetitive self-luminescent phenomena. An electro-optic birefringent ceramic shutter is employed to perform photographic sampling and yields time resolution of 100 μsec. Methods of image enhancement in the presence of background light from a finite-contrast shutter are discussed. The system has been applied to the study of plasma evolution in the CDX device. 21 refs., 4 figs.

49093 **(PPPL—2440) Solitary Alfven wave envelopes and the modulational instability.** Kennel, C.F. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1987. Contract AC02-76CH03073. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000127.

The derivative nonlinear Schroedinger equation describes the modulational instability of circularly polarized dispersive Alfven wave envelopes. It also may be used to determine the properties of finite amplitude localized stationary wave envelopes. Such envelope solitons exist only in conditions of modulational stability.

This leaves open the question of whether, and if so, how, the modulational instability produces envelope solitons. 12 refs.

49094 **(PPPL—2447) Application of polarized nuclei to fusion.** Kulsrud, R.M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract AC02-76CH03073. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000125.

It is shown that the d-t fusion reaction can be modified by polarizing nuclear spins. The ways in which this improves reactor performance are mentioned and the feasibility of the process of spin polarization for magnetic fusion is discussed. 18 refs.

49095 **(PPPL—2449) Effect of deuteron temperature on iron forbidden line intensities in rf-heated tokamak plasmas.** Sato, K.; Suckewer, S.; Wouters, A. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1987. Contract AC02-76CH0307¹. 40p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000124.

Two line ratios, the forbidden line at 845.5 A ($2s^22p\ ^2P$/sub 1/2/ - $2s^22p\ ^2P$/sub 3/2/) to the allowed line at 135.7 A ($2s^22p\ ^2P$/sub 1/2/ - $2s2p^2\ ^2D$/sub 3/2/) in Fe XXII and the forbidden line at 592.1 A ($2s^22p^4\ ^3P_2$ - $2s^22p^4\ ^1D_2$) to the forbidden line at 1118.2 A ($2s^22p^4\ ^3P_2$ - $2s^22p^4\ ^3P_1$) in Fe XIX, have been measured as the ion temperature-sensitive line ratios during rf heating in the Princeton Large Torus. The results indicate that deuteron collisions in plasmas of high deuteron temperature have a noticeable effect on the intensity of the forbidden lines. Measured relative intensities are compared with values from level population calculations, which include deuteron collisional excitation between the levels of the ground configuration. The agreement between the observed and calculated ratios is within 30%. A method for deuteron (or proton) temperature measurement in tokamak plasmas is discussed. 37 refs.

49096 **(PPPL—2450) MIRI: A multichannel far-infrared laser interferometer for electron density measurements on TFTR [Tokamak Fusion Test Reactor].** Mansfield, D.K.; Park, H.K.; Johnson, L.C.; Anderson, H.M.; Chouinard, R.; Foote, V.S.; Ma, C.H.; Clifton, B.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract AC02-76CH03073. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000123.

A ten-channel far-infrared laser interferometer which is routinely used to measure the spatial and temporal behavior of the electron density profile on the TFTR tokamak is described and representative results are presented. This system has been designed for remote operation in the very hostile environment of a fusion reactor. The possible expansion of the system to include polarimetric measurements is briefly outlined. 13 refs., 8 figs.

49097 **(PPPL—2451) Diagonal Pade approximations for initial value problems.** Reusch, M.F.; Ratzan, L.; Pomphrey, N.; Park, W. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1987. Contract AC02-76CH03073. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000122.

Diagonal Pade approximations to the time evolution operator for initial value problems are applied in a novel way to the numerical solution of these problems by explicitly factoring the polynomials of the approximation. A remarkable gain over conventional methods in efficiency and accuracy of solution is obtained. 20 refs., 3 figs., 1 tab.

49098 **(PPPL—2452) Electron heating using lower hybrid waves in the PLT tokamak.** Bell, R.E.; Bernabei, S.; Cavallo, A.; Chu, T.K.; Luce, T.; Motley, R.; Ono, M.; Stevens, J.; von Goeler, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1987. Contract AC02-76CH03073. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000121.

Lower hybrid waves with a narrow high velocity wave spectrum have been used to achieve high central electron temperatures in a tokamak plasma. Waves with a frequency of 2.45 GHz launched by a 16-waveguide grill at a power level less than 600 kW were used to increase the central electron temperature of the PLT plasma from 2.2 keV to 5 keV. The magnitude of the temperature increase depends strongly on the phase difference between the waveguides and on the direction of the launched wave. A reduction in the central electron thermal diffusivity is associated with the peaked electron temperature profiles of lower hybrid current-driven plasmas. 16 refs.

49099 **(PPPL—2457) Inverse problem for incremental synchrotron radiation.** Fisch, N.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jun 1987. Contract AC02-76CH03073. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000117.

Significantly more information is available from synchrotron emission from a plasma when the plasma is purposefully disturbed. An inverse problem, to deduce properties of the disturbance given time-dependent radiation data, is proposed. The fast time response of radiation detectors is fully exploited by this approach. A special case of interest, perpendicular observation of a steady-state plasma, lends itself to an analytic inversion.

49100 **(PPPL—2459) Rigorous upper bounds for fluid and plasma transport due to passive advection.** Krommes, J.A.; Smith, R.A.; Kim, C.B. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract AC02-76CH03073. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000116.

The formulation of variational principles for transport due to passive advection is described. A detailed account of the work has been published elsewhere. In the present paper, the motivations, philosophy, and implications of the method are briefly discussed. 15 refs.

49101 **(PPPL—2460) Parabolic approximation method for the mode conversion-tunneling equation.** Phillips, C.K.; Colestock, P.L.; Hwang, D.Q.; Swanson, D.G. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract AC02-76CH03073. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000115.

The derivation of the wave equation which governs ICRF wave propagation, absorption, and mode conversion within the kinetic layer in tokamaks has been extended to include diffraction and focussing effects associated with the finite transverse dimensions of the incident wavefronts. The kinetic layer considered consists of a uniform density, uniform temperature slab model in which the equilibrium magnetic field is oriented in the z-direction and varies linearly in the x-direction. An equivalent dielectric tensor as well as a two-dimensional energy conservation equation are derived from the linearized Vlasov-Maxwell system of equations. The generalized form of the mode conversion-tunneling equation is then extracted from the Maxwell equations, using the parabolic approximation method in which transverse variations of the wave fields are assumed to be weak in comparison to the variations in the primary direction of propagation. Methods of solving the generalized wave equation are discussed. 16 refs.

49102 **(PPPL—2467) Differential form of the collision integral for a relativistic plasma.** Braams, B.J.; Karney, C.F.F. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Aug 1987. Contract AC02-76CH03073. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000111.

A differential formulation for the Beliaev and Budker relativistic collision integral is presented. This permits the rapid numerical evaluation of the collision integral. The decomposition into spherical harmonics allows the collision operator to be expressed in terms of one-dimensional integrals for simple background distributions. This is useful in carrying out analytical work. It also provides a convenient method for calculating the boundary conditions for the potentials. 6 refs.

49103 **(SAND—87-1748) Analytic model of an imploding Z-pinch plasma colliding inelastically with a thin-shelled cylindrical target.** Hussey, T.W. (Sandia National Labs., Albuquerque, NM (USA)). Sep 1987. Contract AC04-76DP00789. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000051.

A simple model for the target dynamics of a distributed, uniform density imploding gas puff plasma colliding with a thin, annular, cylindrical shell has been developed. This model is applicable

to a pulse-power-driven, photoionization-pumped, recombination x-ray laser. By integrating the equation for momentum conservation it was possible to obtain target closure time, a quantity that may be compared to experiment. In addition, it was possible to find energy available as pump radiation as a function of target parameters. We find that this quantity is maximized when target mass approximately equals the gas mass times the thickness of the gas puff prior to stagnation divided by twice the target radius. We also find that this quantity is a relatively weak function of gas puff shell thickness prior to stagnation, a somewhat stronger function of target mass, and a very strong function of implosion velocity. 7 refs.

49104 **(UCLA/PPG—1092) Measurement of parallel ion energy distribution function in PISCES plasma.** Tynan, G.R.; Goebel, D.M.; Conn, R.W. (California Univ., Los Angeles (USA). Dept. of Mechanical, Aerospace and Nuclear Engineering). Aug 1987. Contract FG03-86ER52134. 44p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000108.

The PISCES facility is used to conduct controlled plasma-surface interaction experiments. Plasma parameters typical of those found in the edge plasmas of major fusion confinement experiments are produced. In this work, the energy distribution of the ion flux incident on a material surface is measured using a gridded energy analyzer in place of a material sample. The full width at half maximum energy distribution of the ion flux is found to vary from 10 eV to 30 eV both hydrogen and deuterium plasmas. Helium plasmas have a much lower FWHM energy spread than hydrogen and deuterium plasmas. The FWHM ion energy spread is found to be linearly related to the electron temperature. The most probable ion energy is found to be linearly related to the bias applied to the energy analyzer. Other plasma parameters have a weak influence upon the energy distribution of the ion flux. Two possible physical mechanisms for producing the observed results are introduced and suggestions for further work are made. The impact of the reported measurements on the materials experiments conducted in the PISCES facility are discussed and recommendations for future experiments are made. 11 refs., 13 figs.

49105 (UCRL—50025-87-1, pp 22-33) **Basic architecture and operation of the Personnel Safety and Interlocks System for MFTF-B.** Branum, J.D. Apr 1987. NTIS, PC A04/MF A01. File Number DE87009361.

In Electronics Engineering Department EE technical review.

A reliable and adaptable safety system was developed for the Mirror Fusion Test Facility-B (MFTF-B), experiment by employing two industrial-type programmable controllers to perform the majority of protective-interlock and hazard-monitoring functions. Self-diagnosing features were added to the controller systems that made the safety system essentially fail-safe even in the event of a hardware of software failure.

49106 **(UCRL—96898) Application of a two fluid theoretical plasma transport model on current tokamak reactor designs.** Ibrahim, E.; Fowler, T.K. (Lawrence Livermore National Lab., CA (USA)). Jun 1987. Contract W-7405-ENG-48. 7p. (CONF-870601—22). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013511.

From Annual meeting of the American Nuclear Society; Dallas, TX, USA (7 Jun 1987).

In this work, the new theoretical transport models to TIBER II design calculations are described and the results are compared with recent experimental data in large tokamaks (TFTR, JET). Tang's method is extended to a two-fluid model treating ions and electrons separately. This allows for different ion and electron temperatures, as in recent low-density experiments in TFTR, and in the TIBER II design itself. The discussion is divided into two parts: (1) Development of the theoretical transport model and (2) calibration against experiments and application to TIBER II.

49107 **Doppler splitting of electron cyclotron absorption resonance in plasmas.** Arunasalam, V.; Efthimion, P.C.; Hosea, J.C.; Hsuan, H.; Taylor, G. (Plasma Physics Laboratory, Princeton University, P.O. Box 451, Princeton, New Jersey 08544-0451). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3909-3911(15 Oct 1987).

The Gaussian broadening of absorption lines due to the Doppler effect is well known. However, it is shown here for the first time that Doppler splitting occurs for the ordinary-mode electron-cyclotron-resonance absorption in plasmas. Although this absorption is due to the finite size of the electron Larmor orbits it is mainly determined by T/sub X/ and is only weakly dependent on T/sub perpendicular/ via cyclotron-overstability-type terms. This is in contrast to intuitive expectations which would suggest that finite-Larmor-radius effects should depend strongly on T/sub perpendicular/.

49108 **Observation of an improved energy-confinement regime in neutral-beam—heated divertor discharges in the DIII-D tokamak.** Burrell, K.H.; Ejima, S.; Schissel, D.P.; Brooks, N.H.; Callis, R.W.; Carlstrom, T.N.; Colleraine, A.P.; DeBoo, J.C.; Fukumoto, H.; Groebner, R.J.; and others. (GA Technologies Inc., P.O. Box 85608, San Diego, California 92138). *Physical Review Letters;* **59**: No. 13, 1432-1435(28 Sep 1987).

Tokamak discharges using the expanded boundary divertor in the DIII-D device exhibit H-mode confinement. With neutral-beam power up to 6 MW, energy confinement remains comparable to the Ohmic value at a plasma current of 1 MA. Confinement is also independent of plasma density and toroidal field. Confinement increases with plasma current, but the exact functional dependence is, as yet, uncertain. These results show that the H mode can be achieved in a reactor-compatible open divertor configuration.

49109 **Anomalous electron heat transport driven by low frequency electromagnetic turbulence.** Thoul, A.A.; Similon, P.L.; Sudan, R.N. (Laboratory of Plasma Studies, Cornell University, Ithaca, New York 14853). *Physical Review Letters;* **59**: No. 13, 1448-1451(28 Sep 1987).

We consider the anomalous electron and heat transport in a tokamak plasma. The electrons are described by the nonlinear drift-kinetic equation. We analyze transport through the averaged response function in the presence of drift-Alfven wave turbulence. In contrast to recent findings by Terry, Diamond, and Hahm, we conclude that magnetic fluctuations lead to a substantial transport of both parallel and perpendicular energies. The latter, previously neglected, is found to be significant and of the order of the test-particle diffusion.

49110 **Ion microinstability at the outer sloshing-ion turning point of the tandem mirror experiment upgrade (TMX-U).** Berzins, L.V.; Casper, T.A. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physical Review Letters;* **59**: No. 13, 1428-1431(28 Sep 1987). Contract W-7405-ENG-48.

Since the start of TMX-U operations we have observed weak oscillations with a frequency approximately twice the ion-cyclotron frequency at the end-cell midplane. Recent results show that this instability is driven at the sloshing-ion outer turning point. We find that the sloshing-ion lifetime scales inversely with the instability amplitude. The sensitivity of this instability to the cold-ion density shows that this is a loss-cone instability. These results have important implications for mirror fusion experiments as well as solar and space plasmas.

49111 **Observation of a new toroidally localized kink mode and its role in reverse-field—pinch plasmas.** Tamano, T.; Bard, W.D.; Chu, C.; Kondoh, Y.; La Haye, R.J.; Lee, P.S.; Saito, M.; Schaffer, M.J.; Taylor, P.L. (GA Technologies, San Diego, California 92121). *Physical Review Letters;* **59**: No. 13, 1444-1447(28 Sep 1987).

A new type of toroidally localized kink instability, which we named the "slinky mode," was observed in a reversed-field—pinch plasma in the OHTE (Ohmic heating toroidal experiment) device. It is found that the slinky mode is the result of the phase locking of several internal kink modes due to nonlinear coupling and is an effective way to approach the Taylor relaxed state.

49112 **Turbulent relaxation of a confined magnetofluid to a force-free state.** Dahlburg, J.P.; Montgomery, D.; Doolen, G.D.; Turner, L. (Naval Research Lab., Washington, DC, USA; Dartmouth Coll., Hanover, NH, USA; Los Alamos National Lab., NM, USA). *Journal of Plasma Physics;* **37**: 299-321(Apr 1987).

Three-dimensional, pseudo-spectral computation is used to follow the evolution of a resistive, incompressible magnetofluid. The magnetofluid is confined by rigid, free-slip, perfectly-conducting square boundaries in the x, y directions ('poloidal' boundaries), and periodic boundary conditions are assumed in the z direction ('toroidal' direction). A constant, uniform d.c. magnetic field B/sub o/ is assumed in the z direction and a non-uniform current density j flows along it initially. Starting from a non-equilibrium hollow current profile, the evolution is followed for several tens of Alfven transit times. Considerable small-scale turbulence develops, which causes energy to decay more rapidly than magnetic helicity. The average toroidal magnetic field at the (x, y) boundary reverses sign spontaneously. The near spatial constancy of the ratio j.B/(jB) identical to cos theta, in the relaxed state at late times, suggests that the state is nearly force-free. However, the ratio $j.B/B^2$ identical to lambda is considerably less uniform than is cos theta, suggesting more residual disorder than a pure minimum-energy state would display.

49113 **X-ray multilayer optic development for plasma diagnostic and source enhancement.** Koppel, L.N.; Franco, E.D.; Penkethman, J.A.; Rodrigues, B. (Advanced Research and Applications Corp. (ARACOR), 1223 East Arques Avenue, Sunnyvale, CA 94086). pp 53-57 of X-ray imaging II. Knight, L.V.; Bowen, D.K. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1986). (CONF-860880—).

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

The development of layered synthetic microstructure x-ray optic arrays to serve two distinct roles in high temperature plasma experimental research are described. An optic array of large active area (>500 cm/sup 2/) provides the basis for a fusion product-immune x-ray imaging system (XIS) diagnostic that is experimentally evaluated at the Princeton Plasma Physics Laboratory (PPPL) Tokamak Fusion Test Reactor (TFTR). The array is formed by end-to-end assembly of concave-cylindrical multilayer components along a parabolic trace. The experience to date in the physics and engineering design of the array is described.

49114 **Soft x-ray imaging system for measurement of non-circular tokamak plasmas.** Fonck, R.J.; Reusch, M.; Jaehnig, K.P.; Hulse, R.; Roney, P. (Princeton Univ. Plasma Physics Lab., Princeton, NJ 08544). pp 111-117 of X-ray imaging II. Knight, L.V.; Bowen, D.K. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1986). (CONF-860880—).

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

A soft x-ray camera and image processing system has been constructed to provide measurements of the internal shape of high temperature tokamak plasmas. The camera consists of a metallic-foil-filtered pinhole aperture and a microchannel plate image intensifier/convertor which produces a visible image for detection by a CCD TV camera. A wide-angle tangential view of the toroidal plasma allows a single compact camera to view the entire plasma cross section. With Be filters 12 to 100 m thick, the signal from the microchannel plate is produced mostly by nickel L-line emissions which originate in the hot plasma core. The measured toroidal image is numerically inverted to produce a cross-sectional soft X-ray image of the plasma. Since the internal magnetic flux surfaces are usually isothermal and the nickel emissivity depends strongly on the local electron temperature, the X-ray emission contours reflect the shape of the magnetic surfaces in the plasma interior. Initial results from the PBX tokamak experiment show clear differences in internal plasma shapes for circular and bean-shaped discharges.

49115 **(CONF-870188—1) Proposals for ORNL [Oak Ridge National Laboratory] support to Tiber LLNL [Lawrence Livermore National Laboratory].** Berry, L.A.; Rosenthal, M.W.; Saltmarsh, M.J.; Shannon, T.E.; Sheffield, J. (Oak Ridge National Lab., TN (USA)). 27 Jan 1987. Contract AC05-84OR21400. 99p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87011657.

From Proposals for ORNL support to Tiber LLNL; Livermore, CA, USA (27 Jan 1987).

This document describes the interests and capabilities of Oak Ridge National Laboratory in their proposals to support the Lawrence Livermore National Laboratory (LLNL) Engineering Test Reactor (ETR) project. Five individual proposals are cataloged separately. (FI)

49116 (CONF-870188—1, pp 9, Paper 1) **Review of ORNL support for LLNL ETR effort.** Saltmarsh, M.J. (Oak Ridge National Lab., TN). 27 Jan 1987. NTIS, PC A05/MF A01. File Number DE87011657.

From Proposals for ORNL support to Tiber LLNL; Livermore, CA, USA (27 Jan 1987).

This proposal outlines the elements of a successful Engineering Test Reactor (ETR) effort and describes the proposed efforts by Oak Ridge National Laboratory (ORNL) in support of this research and development. The ORNL effort would involve physics, concepts, technology rsearch and development, and design. (FI)

49117 (CONF-870188—1, pp 17, Paper 2) **Proposal for ORNL physics support for Tiber.** Sheffield, J. (Oak Ridge National Lab., TN). 27 Jan 1987. NTIS, PC A05/MF A01. File Number DE87011657.

From Proposals for ORNL support to Tiber LLNL; Livermore, CA, USA (27 Jan 1987).

This proposal outlines the physics constraints and factors to be considered in the design of the Engineering Test Reactor (ETR). Also listed are the goals of Oak Ridge National Laboratory in addressing these areas. (FI)

49118 (CONF-870188—1, pp 14, Paper 3) **FEDC/ORNL role in ETR design.** Shannon, T.E. (Oak Ridge National Lab., TN). 27 Jan 1987. NTIS, PC A05/MF A01. File Number DE87011657.

From Proposals for ORNL support to Tiber LLNL; Livermore, CA, USA (27 Jan 1987).

This proposal describes the Fusion Engineering Design Center (FEDC)/Oak Ridge National Laboratory (ORNL) in Engineering Test Reactor design. Personnel and conceptual design capabilities are outlined, and the proposed support responsibility is discussed. (FI)

49119 (CONF-870188—1, pp 40, Paper 4) **Proposed ORNL development and technology engineering test reactor roles.** Berry, L.A. (Oak Ridge National Lab., TN). 27 Jan 1987. NTIS, PC A05/MF A01. File Number DE87011657.

From Proposals for ORNL support to Tiber LLNL; Livermore, CA, USA (27 Jan 1987).

This proposal discusses Oak Ridge National Laboratory's (ORNL) involvement and experience in the area of Fusion Technology. An outline of Engineering Test Reactor (ETR) tasks has been provided with statements as to the approach of ORNL intends in addressing these tasks.

49120 (CONF-870188—1, pp 13, Paper 5) **Background information and technical basis for assessment of environmental implications of magnetic fusion energy.** Cannon, J.B. (Oak Ridge National Lab., TN). 27 Jan 1987. NTIS, PC A05/MF A01. File Number DE87011657.

From Proposals for ORNL support to Tiber LLNL; Livermore, CA, USA (27 Jan 1987).

This proposal discusses the necessity of considering the environmental effects of the Engineering Test Reactor (ETR). A discussion of reliability, maintenance tasks, design of magnet coils, and remote handling is provided as a technical approach to minimizing any potential environmental hazard. (FI)

49121 **(CONF-8505191—Summ.) Report on the joint meeting of the Division of Development and Technology Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups.** Wilson, K.L. (ed.). (Sandia National Labs., Livermore, CA (USA)). Oct 1985. Contract AC04-76DR00789. 406p. NTIS, PC A18. File Number DE87013324.

From Joint meeting of the plasma/wall interactions and high heat flux materials and component task groups of the Division of Development and Technology; Washington, DC, USA (21 May 1985).

This report of the Joint Meeting of the Division of Development and Technology Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups contains contributing papers in the following areas: Plasma/Materials Interaction Program and Technical Assessment, High Heat Flux Materials and Components Program and Technical Assessment, Pumped Limiters, Ignition Devices, Program Planning Activities, Compact High Power Density Reactor Requirements, Steady State Tokamaks, and Tritium Plasma Experiments. All these areas involve the consideration of High Heat Flux on Materials and the Interaction of the Plasma with the First Wall. Many of the Test Facilities are described as well. (LSP)

49122 **(CONF-8707106—1) Interim report for Critical Issue E configuration and maintenance.** Spampinato, P.T. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014056.

From INTOR workshop; Vienna, Austria (13 Jul 1987).

Six activities have been under investigation for Critical Issue E during this phase of the INTOR Workshops. They deal with potential improvements to the tokamak configuration, changes to the maintenance and disassembly procedures, and the incorporation of design innovations. They are as follows: A comparative study of vertical and horizontal access configurations, the use of shape memory alloys, the use of ferromagnetic inserts for ripple reduction, poloidal field (PF) coil redundancy to reduce the size of the lower outboard coil, rapid replacement of divertor and first wall structures, and containment of tritium and activated dust. These topics are reviewed in this paper in the form of viewgraph presentation.

49123 **(DOE/DP/40200—33) Time-resolved absorption measurements on OMEGA.** Jaanimagi, P.A.; DaSilva, L.; Delettrez, J.; Gregory, G.G.; Richardson, M.C. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 16p. (CONF-8607116—2-Vugraphs). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014465.

From 16. annual anomalous absorption conference; Lake Luzerne, NY, USA (13 Jul 1986).

Time-resolved measurements of the incident laser light that is scattered and/or refracted from targets irradiated by the 24 uv-beam OMEGA laser at LLE, have provided some interesting features related to time-resolved absorption. The decrease in laser absorption characteristic of irradiating a target that implodes during the laser pulse has been observed. The increase in absorption expected as the critical density surface moves from a low to a high Z material in the target has also been noted. The detailed interpretation of these results is made through comparisons with simulation using the code LILAC, as well as with streak data from time-resolved x-ray imaging and spectroscopy. In addition, time and space-resolved imaging of the scattered light yields information on laser irradiation uniformity conditions on the target. The report consists of viewgraphs.

49124 **(DOE/DP/40200—34) Time-resolved ablation measurements of imploding targets.** DaSilva, L.; Delettrez, J.; Epstein, R.; Gregory, G.G.; Jaanimagi, P.A.; Richardson, M.C. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 12p. (CONF-8607116—3-Vugraphs). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014464.

From 16. annual anomalous absorption conference; Lake Luzerne, NY, USA (13 Jul 1986).

Time-resolved x-ray spectroscopy of multi-layer shell targets irradiated by the 24 uv-beam OMEGA laser at LLE has been used to infer the mass ablation rate during the implosion. The x-ray emission from Al and Mg signature layers imbedded in 10 microns of CH was recorded with an x-ray streak camera coupled to an elliptical crystal spectrometer. The radial position at the time of burn-through was measured directly using time-resolved x-ray imaging. The mass ablation rate calculated by this method, although confirming previous experimental measurements, continues to exceed that predicted by the hydrocode LILAC run with a flux limiter of 0.06. Furthermore, the time evolution of the Al and Mg emission indicate a characteristic rise-time longer than that observed in non-LTE simulations. One possible explanation of these discrepancies is beam nonuniformities, the effects of which are discussed. The report consists of viewgraphs.

49125 **(DOE/DP/40200—39) Enhanced Thomson scattering from laser plasmas.** Batha, S.H.; Seka, W.; Goldman, L.M.; Simon, A.; Short, R.W.; Bahr, R.; Lockman, W. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 13p. (CONF-861110—8). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014463.

From American Physical Society Plasma Physics Division meeting; Baltimore, MD, USA (3 Nov 1986).

Carried out is a preliminary series of experiments to investigate the origin of broad band features in the scattered light spectrum of laser-produced plasmas. Results are consistent with the Thomson Scattering model enhanced by the presence of a non-thermal electron distribution as opposed to the usual convective stimulated Raman scattering model.

49126 **(DOE/DP/40200—41) Time-resolved temperature and density measurements in ionizing, uniformly irradiated uv-laser-produced plasmas.** Marjoribanks, R.; Audebert, P.; DaSilva, L.; Delettrez, J.; Epstein, R.; Gregory, G.; Jaanimagi, P.; Richardson, M. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 14p. (CONF-861110—9-Vugraphs). NTIS MF A01; 2; GPO Dep. File Number DE87014649.

From American Physical Society Plasma Physics Division meeting; Baltimore, MD, USA (3 Nov 1986).

The purpose of these experiments is to produce a well-defined measurement of local temperature and density in an x-ray emitting region of a uniformly irradiated uv-laser-produced plasma. Results are given the viewgraphs that make up the report.

49127 **(DOE/DP/40200—47-Vol.31) LLE [Laboratory for Laser Energetics] review, Volume 31: Quarterly report, April-June 1987.** Donaldson, W. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1987. Contract FC08-85DP40200. 60p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87013732.

This volume of the LLE Review, covering the period April-June 1987, contains a summary of the recent high-density campaign on the OMEGA laser system; a report on the absorption and radiation of energy from spherically irradiated targets; and a computer model describing the source of hot spots in the OMEGA laser. The section on advanced technology has reports on a method for accurately measuring the phase of a high-power laser and the development of an extremely bright and compact laser. Finally the activities of the National Laser Users Facility and the GDL and OMEGA laser facilities are summarized. The highlights of this issue are: the high-density campaign using gas-filled targets on the OMEGA laser system resulted in fuel compressions of 50 times liquid DT density; measurements on spherically irradiated targets have demonstrated that the one-dimensional hydrodynamic code

LILAC can accurately predict the absorption of ultraviolet radiation and the subsequent production of x rays; the source of hot spots in the target-plane intensity profile of the OMEGA ultraviolet beams has been identified. Small aberrations in the infrared phase profile cause the third-harmonic light to fragment into several small beamlets in the target plane; a method has been developed to accurately measure the phase of a high-power laser beam. Variations as small as $\lambda/50$ can be measured, making it possible to identify source of the hot spots in the OMEGA laser beam; an extremely bright and compact laser has been developed. This laser, which fits on a tabletop, has achieved 0.5 J in 1.0 ps and can attain a brightness of 4×10^{16} W/cm^2 $\Delta\Omega$ when focused with an f/1 lens; and a cryogenic target positioner was installed and activated on the OMEGA target chamber. The first in a series of shots was taken to achieve high-density implosions of cryogenic targets.

49128 **(DOE/ET/51013—214) High field, low current operation of engineering test reactors.** Schwartz, J.; Cohn, D.R.; Bromberg, L.; Williams, J.E.C. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Jun 1987. Contract AC02-78ET51013. 12p. (CONF-871007—1; PFC/CP—87-2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013942.

From Symposium on fusion engineering; Monterey, CA, USA (12 Oct 1987).

Steady state engineering test reactors with high field, low current operation are investigated and compared to high current, lower field concepts. Illustrative high field ETR parameters are R = 3 m, $\alpha \sim 0.5$ m, B $\sim$ 10 T, $\beta = 2.2\%$ and I = 4 MA. For similar wall loading the fusion power of an illustrative high field, low current concept could be about 50% that of a lower field device like TIBER II. This reduction could lead to a 50% decrease in tritium consumption, resulting in a substantial decrease in operating cost. Furthermore, high field operation could lead to substantially reduced current drive requirements and cost. A reduction in current drive source power on the order of 40 to 50 MW may be attainable relative to a lower field, high current design like TIBER II implying a possible cost savings on the order of $200 M. If current drive is less efficient than assumed, the savings could be even greater. Through larger β/sub p/ and aspect ratio, greater prospects for bootstrap current operation also exist. Further savings would be obtained from the reduced size of the first wall/blanket/shield system. The effects of high fields on magnet costs are very dependent on technological assumptions. Further improvements in the future may lie with advances in superconducting and structural materials.

49129 **(EUR—10422) Mixing and mass transfer in bubble extractor: its application to tritium extraction from 17Li83Pb.** Baratti, R.; Polcaro, A.M.; Ricci, P.F.; Viola, A.; Pierini, G. (Commission of the European Communities, Ispra (Italy). Joint Research Centre; Commission of the European Communities, Luxembourg). 1986. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87752560.

The tritium extraction from the liquid alloy 17Li83Pb has been examined taking into consideration the equations related to the design of bubble extractors in order to verify which are the highest tritium recovery efficiencies which can be realized so as to minimize the tritium permeation into the water of the cooling system. For the tritium desorption from alloy, flowing countercurrent to a helium stream in a bubble extractor, the axial dispersion in liquid and gaseous phase and the effect of gas phase expansion caused by reduced hydrostatic head in the extractor are taken into account. Taking into consideration some NET technical specifications, such as the alloy volume in the blanket of 65 m/sup 3/ and the tritium generation rate of 78 g.d/sup -1/, the results are presented and discussed.

49130 **(EUR-CEA-FC—1311) Mode attenuation in overdimensioned circular waveguides for millimeter and submillimeter waves - comparison of principal modes in different types of guides.** Crenn, J.P. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee). Nov 1986. 73p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE87752595.

Theoretical results on different waveguide types are gathered, possible improvements are studied, different models are compared. In the same time, comparing solutions in millimeter and submillimeter fields make possible the joint between these two fields for which, up to now, different solutions have been brought. The study is essentially aimed at attenuation in waveguides. It is necessary to use overdimensioned guides (that is to say having transverse dimensions greater than the wavelength) to lower sufficiently the attenuation. Simultaneous propagation of several modes is consequently possible in the guide. In limiting us to overdimensioned guides, mode attenuation is compared in metal circular guides, circular guides with dielectric or weakling conducting walls, and circular guides with more complex structures, together with corrugated metal and metal dielectric composite wall guides.

49131 **(HEDL-SA—3379) Low activation ferritic alloys for nuclear fusion reactors.** Gelles, D.S. (Hanford Engineering Development Lab., Richland, WA (USA)). Jan 1987. Contract AC06-76FF02170. 21p. (CONF-870272—7-Vugraphs). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87010711.

From American Institute of Metallurgical Engineers annual meeting: light metals session; Denver, CO, USA (22 Feb 1987).

The fusion power reactor concept has an inherent advantage over fission reactor designs; the radioactivity of the fuel decays rapidly with time. However, this inherent advantage will be lost unless reactor structural materials can be employed which have similar advantages. Elemental additions of Nb, Mo, Ni, and N have half lives which will lead to high levels of radioactivity even after 100 years of storage. Therefore, the Office of Fusion Energy, DOE has funded development of low activation alloys, i.e., alloys with very limited additions of Nb, Mo, Ni and N. This paper describes the design and testing of one series of alloys from one of the classes of materials being studied. The alloys are bainitic or martensitic stainless steels which have tungsten and/or vanadium substituted for molybdenum. Alloy selection criterion, production and testing will be described including microstructural examination and mechanical properties testing following irradiation by fast neutrons in a liquid metal cooled fast breeder reactor. The results demonstrate that martensitic stainless steels in the Fe-9 to 12 Cr range appear most promising for fusion structural materials applications.

49132 **(HEDL-SA—3476) Some safety considerations of liquid lithium as a fusion breeder material.** Jeppson, D.W.; Muhlestein, L.D. (Hanford Engineering Development Lab., Richland, WA (USA)). Jan 1986. Contract AC06-76FF02170. 5p. (CONF-860652—34). NTIS, PC A02. File Number DE87014372.

From 7. topical meeting on the technology of fusion energy; Reno, NV, USA (15 Jun 1986).

Test results and conclusions are presented for the reaction of steam with a high temperature lithium pool and for the reaction of high temperature lithium spray with a nitrogen atmosphere. The reactions are characterized and evaluated in regard to the potential for mobilization of radioactive species associated with the liquid breeder under postulated fusion reactor accident conditions. These evaluations include measured lithium temperature responses, atmosphere temperature and pressure responses, gas consumption and generation, aerosol quantities and particle size characterization, and potentially radioactive species releases. Conclusions are made as to the consequences of these safety considerations for the use of lithium as a fusion reactor breeder material.

49133 **(IPPJ—775) ICRF current drive experiment on JIPP T-IIU.** Ando, R.; Kako, E.; Ogawa, Y.; Watari, T. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Apr 1986. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87702933.

In JIPP T-IIU tokamak the fast wave current drive by five loop antennas has been successfully carried out with a relatively high density plasma (ω/sub pe//sup 2//ω/sub ce//sup 2/ — 5). The RF frequency is 40 MHz and the toroidal field is 2 kG, which corresponds to $\omega = 13\omega$/sub cH/. To exclude the effect of the inductive field, the plasma production and the start-up of the plasma current have been done with ICRF wave only. The density and temperature of a plasma produced by the RF wave are that n-bar/

sub e/ — 2 x 10/sup 18/ m/sup -3/ and T/sub e/ — 10 eV, where only the fast wave can propagate excluding out the possibility of a slow wave current drive. This density is two orders of magnitude higher than the density limit predicted for the slow wave current drive. The maximum plasma current of 3.5 kA is driven with the rf power of about 400 kW. The efficiency eta = I/sub P/n-bar/sub e/ R/P/sub rf/ is around 2 x 10/sup 16/ A center dot m/sup -2//W, which is two orders of magnitude lower than that of recent lower hybrid current drive. A large MHD oscillation is observed and the electron temperature is limited around 10 eV, although the safety factor q/sub a/ is about 10 or more. The relatively low current drive efficiency observed will be attributed to the low electron temperature. We have observed the clear dependence of the current drive efficiency as a function of the phase difference Δphi. When antennas are phased with Δphi = $\pi/4$, the maximum efficiency is obtained. A calculation shows that the wave spectrum is then peaked around N sub(parallel) — 4.

49134 (IPPJ-DT—126) Low power level control unit of high power amplifiers for ICRF heating experiment in JIPP T-IIU tokamak. Kako, E.; Aoki, T.; Watari, T. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Mar 1986. 18p. (In Japanese). NTIS (US Sales Only), PC A02/MF A01. File Number DE87702938.

A low power level control unit for high power amplifiers was made on an trial basis and employed successfully in ICRF heating experiment on JIPP T-IIU tokamak. This unit has four operating modes; (1) short pulse mode for tuning of high power amplifiers, (2) aging mode for aging of ICRF antennas, (3) long pulse mode for a manual operation and (4) experimental mode which is synchronized to tokamak discharges. An rf pulse signal is modulated by this unit for each mode. Moreover, this unit is interlocked with status signals, reflected rf power from a load and plasma current. This low power level control unit can be used in a frequency range of 10 MHz - 100 MHz.

49135 (LA-UR—87-2875) A tapered poloidal gap for the reduction of field errors. Moses, R.W. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 7p. (CONF-8707105—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014750.

From Reversed field pinch workshop; Los Alamos, NM, USA (13 Jul 1987).

The conventional Reversed Field Pinch is surrounded by a toroidal conducting shell that provides wall stabilization for the plasma. Usually, this shell is made of aluminum or copper, and it must have an insulated poloidal gap to permit penetrations of toroidal loop voltage to the plasma. Many magnetic field perturbations will induce toroidal shell currents with poloidal Fourier components having mode numbers m ≧1. A butt-joint poloidal gap will mode convert all of these image currents into potentially damaging magnetic-field errors with large spectra of toroidal-mode numbers. Overlapping tapered gaps have been proposed and partially tested for reducing these field errors. The mathematical basis for minimizing the m = 1, n = 0 field errors for all frequencies using tapered gaps, is presented in this paper.

49136 (NIIEFA-P-B—0697) Some results of parametric analysis of plasma current disruption effects in a reactor-tokamak. Astapkovich, A.M.; Sadakov, S.N. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703341.

Intensive reconstruction of poloidal magnetic field in tokamak reactor blanket area takes place in the plasma current disruption mode and electrodynamic loads on the blanket structures reach their extreme values. Bound loop approach is applied for analysis of transitional electromagnetic processes, occuring in tokamak reactor azimuth-sectioned blanket under plasma current disruption. Parametric dependence of eddy current maximum values, electric voltage between the blanket sectors and the main electrodynamic loads on the active resistance of bellows and blanket sector inside walls and on the typical time of plasma current decay, is presented. 7 references, 8 figures, 2 tables.

49137 (ORNL/FEDC—86/5) System studies of compact ignition tokamaks. Galambos, J.D.; Blackfield, D.T.; Peng, Y.K.M.; Reid, R.L.; Strickler, D.J.; Selcow, E. (Oak Ridge National Lab., TN (USA). Fusion Engineering Design Center). Aug 1987. Contract AC05-84OR21400. 75p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014976.

The new Tokamak Systems Code, used to investigate Compact Ignition Tokamaks (CITs), can simultaneously vary many parameters, satisfy many constraints, and minimize or maximize a figure of merit. It is useful in comparing different CIT design configurations over wide regions of parameter space and determining a desired design point for more detailed physics and engineering analysis, as well as for performing sensitivity studies for physics or engineering issues. Operational windows in major radius (R) and toroidal field (B) space for fixed ignition margin are calculated for the Ignifed and Inconel candidate CITs. The minimum R bounds are predominantly physics limited, and the maximum R portions of the windows are engineering limited. For a modified Kaye-Goldston plasma-energy-confinement scaling, the minimum size is 1.15 m for the Ignifed device and 1.25 m for the Inconel device. With the Ignition Technical Oversight Committee (ITOC) physics guidance of B^2a/q and I/sub p/ >10 MA, the Ignifed and Base-line Inconel devices have a minimum size of 1.2 and 1.25 m and a toroidal field of 11 and 10.4 T, respectively. Sensitivity studies show Ignifed to be more sensitive to coil temperature changes than the Inconel device, whereas the Inconel device is more sensitive to stress perturbations.

49138 (ORNL/TM—10365) Relative merits of size, field, and current on ignited tokamak performance: A comparison of "CITs" and "Super-JETs". Uckan, N.A. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000038.

A simple global analysis is used to examine the relative merits of size (L = a or R_o), field (B_o), and current (I) on ignition regimes of tokamaks under various confinement scaling laws. Scalings of key parameters (n tau/sub E/, β, P/sub aux/, P/sub fus/, etc.) with L, B_o, and I are presented at several operating points, including: (1) optimal path to ignition (saddle point); (2) ignition at minimum beta; (3) ignition at 10 keV; and (4) maximum performance at the limits of density (n/sub max/ ~ B_o/R_o) and beta (β/sub crit/ ~ I/aB_o). Expressions for the saddle point and the minimum conditions needed for Ohmic ignition are derived analytically for any confinement model of the form tau/sub E/ ~ n/sup x/T/sup y/. For a wide range of confinement models, the "figure of merit" parameters aB_o^2/q^* ~ $IB_o(R_o/a)$ and I are found to give a good indication of the relative performance of the devices, where q^* is the cylindrical safety factor. As an illustration, the results are applied to "CITs" (a class of compact, high-field ignition tokamaks) and "Super-JETs" [a class of large-size (few x JET), low-field, high-current (20-MA) devices]. 22 refs.

49139 (ORNL/TM—10464) Planning for US ion cyclotron heating research relevant to the Compact Ignition Tokamak and Alcator C-Mod. Swain, D.W.; Yugo, J.J. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 74p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE88000022.

Ion cyclotron heating (ICH) has been chosen as the primary method for providing auxiliary heating power to the plasma in the Compact Ignition Tokamak (CIT). Sustained progress in ion cyclotron range of frequencies (ICRF) heating experiments, together with supporting technology development, continues to justify selection of this technique as the preferred one for heating CIT to ignition. However, the CIT requirements are sufficiently different from existing achievements that continued experimentation and development are needed to meet the goals of the CIT experiment with a high degree of reliability. The purpose of this report is fourfold: (1) to review briefly the physics and technology research and development (R & D) needs for ICH on CIT, (2) to review the status of and planned programs for ICH on US and international machines, (3) to propose a unified "mainline" R & D program specifically geared to testing components for CIT, and (4) to assess the needs for experiments including C-Mod, the Tokamak Fusion Test Reac-

tor (TFTR), and DIII-D to provide earlier information and improved probability of success for CIT ICH. 4 refs., 4 figs., 5 tabs.

49140 **(ORNL/TM—10482) Progress in stellarator/heliotron research, 1981-1986: Executive summary.** Carreras, B.A.; Grieger, G.; Harris, J.H.; Johnson, J.L.; Lyon, J.F.; Motojima, O.; Rau, F.; Renner, H.; Rome, J.A.; Uo, K. (Oak Ridge National Lab., TN (USA)). Sep 1987. Contract AC05-84OR21400. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000017.

Substantial progress in plasma parameters, physics understanding, and stellarators/heliotron concept improvement has been made in the five years since a previous assessment of the field. This includes substantial achievements in higher plasma parameters and currentless plasma operation; new theoretical results with respect to higher beta limits, second stability region, effect of a helical axis, effect of electric fields on transport, and reduction of secondary currents; and improvements to the reactor concept. The key issues have been further refined, and the short-term direction of the program is clear; a number of new facilities that were designed to resolve these issues are about to come into operation or are in the final design stages. Details of the design of the next-generation experiments will follow from the results of the near-term experiments.

49141 **(PPPL—2446) Polarized advanced fuel reactors.** Kulsrud, R.M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract AC02-76CH03073. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000126.

The d-^{3}He reaction has the same spin dependence as the d-t reaction. It produces no neutrons, so that if the d-d reactivity could be reduced, it would lead to a neutron-lean reactor. The current understanding of the possible suppression of the d-d reactivity by spin polarization is discussed. The question as to whether a suppression is possible is still unresolved. Other advanced fuel reactions are briefly discussed. 11 refs.

49142 **(PPPL—2465) The spheromak as a prototype for ultra-high-field superconducting magnets.** Furth, H.P.; Jardin, S.C. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Aug 1987. Contract AC02-76CH03073. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE88000112.

In view of current progress in the development of superconductor materials, the ultimate high-field limit of superconducting magnets is likely to be set by mechanical stress problems. Maximum field strength should be attainable by means of approximately force-free magnet windings having favorable "MHD" stability properties (so that small winding errors will not grow). Since a low-beta finite-flux-hole spheromak configuration qualifies as a suitable prototype, the theoretical and experimental spheromak research effort of the past decade has served to create a substantial technical basis for the design of ultra-high-field superconducting coils. 11 refs.

49143 **15-cm hybrid ion diode on PBFA-I.** Mendel C.W. Jr.; Quintenz, J.P.; Mix, L.P.; Zagar, D.M.; Noack, R.L.; Grasser, T.; Webb, J.A. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Journal of Applied Physics;* **62**: No. 9, 3522-3534(1 Nov 1987).

Diode experiments on the PBFA-I pulser using a magnetically insulated ion diode are described. The insulating magnetic field is supplied by self-field due to the ion current plus the field generated by a series field coil. In the experiments described here, the diode operated at the 10-TW, 2.5-MV level with over 300 kJ going to the diode on many shots. The operation of the diode, the dielectric anode, and the proton beam focusing are described.

49144 **Fabrication of polyvinyl alcohol coated polystyrene shells.** Burnham, A.K.; Grens, J.Z.; Lilley, E.M. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **5**: No. 6, 3417-3421(Nov 1987). Contract W-7405-ENG-48.

Glass shells have been used traditionally as the deuterium—tritium fuel container for direct-drive laser fusion experiments because of their convenience and availability, but lower-Z fuel containers have superior implosion characteristics and diagnostic possibilities. Unfortunately, polymers such as polystyrene (PS) that produce shells easily have very high permeabilities so require cryogenics to retain fuel, and impermeable polymers such as polyvinyl alcohol (PVA) are difficult to make into high-quality shells. We have developed improved methods of making PS shells with diameters from 0.2 to 0.7 mm and coating them with a 3-μm layer of PVA to obtain the advantages of both. Both the PS shells and the PVA coating are made in drop towers using gas-stripped nozzles. Details of the procedures and product quality are discussed.

49145 **Effect of laser illumination nonuniformity on the analysis of time-resolved x-ray measurements in uv spherical transport experiments.** Delettrez, J.; Epstein, R.; Richardson, M.C.; Jaanimagi, P.A.; Henke, B.L. (Laboratory for Laser Energetics, University of Rochester, 250 East River Road, Rochester, New York 14623-1299). *Physical Review [Section] A: General Physics;* **36**: No. 8, 3926-3934(15 Oct 1987).

In this paper we present measurements of thermal transport in spherical geometry made with 24 uv (351-nm) beams from the OMEGA laser system of the Laboratory for Laser Energetics of the University of Rochester. The measurements, using time-resolved x-ray spectroscopy on solid glass targets coated with varying thicknesses of plastic, provide absolute measurements of the onset times of the resonance x-ray lines of silicon. From these measurements, the scaling of the instantaneous mass-ablation rate with absorbed intensity is obtained for times before and after the peak of the laser pulse. The observed large burnthrough depths and early onsets of the x-ray lines are explained by carrying out detailed hydrodynamic-code simulations for the range of the estimated laser-intensity distribution on target which is obtained from the superposition of the equivalent target-plane intensity distribution of a single beam. We find that neglecting the effects of laser illumination nonuniformities can lead to erroneous conclusions about the heat transport. We conclude from the analysis that the experimental results can be explained by the presence of significant energy at intensities three times the nominal intensity, contained in hot spots of size less than 20 μm. This is almost twice as much as the maximum intensity obtained from the superposition of the single-beam distribution.

49146 **Process and system for detecting and measuring a tritium gas leak.** Thurlow, N.C.; Hruda, R.M. (to Westinghouse Electric Corp., Pittsburgh, PA). US Patent 4,683,749. 4 Aug 1987. Filed date 22 May 1986. vp. Patent and Trademark Office, Box 9, Washington, DC 20232.

This patent describes a method for detecting and measuring a tritium gas leak from a sealed container comprising, disposing a sealed container of tritium gas in a chamber, collecting and concentrating a sample of gas from the chamber in a reservoir and passing the sample into at least one radiation detector.

49147 **Tokamak fusion reactor start-up simulation.** Ling, K.M.; Jardin, S.C.; Perkins, F.W. (Los Alamos National Lab., Los Alamos, NM 87545). *Fusion Technology;* **12**: No. 1, 22-29(Jul 1987). Contract AC02-76CH03073.

The simulation code TSEC (time-dependent spectral equilibrium code) has been developed to model the axisymmetric evolution of a tokamak on the resistive (L/R) time scale of the external coils, conductors, or shell. The electromagnetic interaction between the plasma and the external circuit is taken into account in a self-consistent manner. The Lagrangian TSEC utilizes magnetic flux coordinates with spectral decomposition in the angle variable θ. The plasma is modeled as a finite-size, zero-inertia, finite-pressure fluid, which adjusts its position and shape to remain in free-boundary equilibrium, consistent with the currents in the external circuits. At the heart of TSEC is a fast method of calculating the self-consistent free-boundary plasma equilibrium at each time step, which is based on the minimization of a certain mean-square error.

49148 **A fusion reactor for space applications.** Kammash, T.; Galbraith, D.L. (Univ. of Michigan, Dept. of Nuclear Engineering, Ann Arbor, MI 48109). *Fusion Technology;* **12**: No. 1, 11-21(Jul 1987).

A novel approach to fusion power that combines the favorable aspects of magnetic and inertial confinements has recently been proposed in the "magnetically insulated inertial confinement fusion" (MICF) reactor. In contrast to conventional inertial confinement

schemes, this approach relies on generating the needed plasma inside of a spherical shell by zapping the inside surface of a hollow pellet with an intense laser beam. Physical confinement is provided by the metallic shell that surrounds the deuterium-tritium fuel-coated inner surface, while very strong, plasma-generated magnetic fields provide the desired thermal insulation of the plasma from the surrounding surface. Because of these unique properties, the inertial confinement time can be increased by about two orders of magnitude relative to that of conventional inertial confinement schemes, with the result that truly impressive energy multiplication factors can result. Carbon dioxide lasers of hundreds of kilojoules may be readily employed for such reactors, and, since they are relatively efficient and can be chemically driven, these systems lend themselves nicely to such space applications as space-based power sources or rocket propulsion.

49149 **A macroscopic study of the neutron, gamma- and X-ray emissivity in the Frascati plasma focus.** Brzosko, J.S.; Robouch, B.V.; Klobukowska, J. (Stevens Institute of Technology, Hoboken, NJ 07030). *Fusion Technology;* **12**: No. 1, 71-91(Jul 1987).

Experiments were carried out in the neutron-optimized mode of the plasma focus operation with small electrode diameters and condenser bank energies of 250, 390, and 490 kJ. The time sequence of the emitted radiation (neutron and gamma) was realized by the time-of-flight (TOF) method using an NE-102A plastic scintillator and silicon detectors viewing X rays from the plasma exclusively. The detectors were operated in the wide-energy window mode. Special attention was given to the interpretation of neutron TOF traces and their comparison with the absorption analysis and previously measured spectra by nuclear plates. Average values are discussed simultaneously with the results of representative single shots. It was found that two (something more) neutron bursts are typical and, in each case, are accompanied by simultaneous hard X rays. The maxima of emissivities coincide with the dI/dt maximum. A theoretical analysis of the results reveals the existence of long time-confined streams of fast electrons and deuterons (effective-energy — 80keV) with evidence of their slowing down.

99 GENERAL AND MISCELLANEOUS

49150 **(CONF-870649—2) Definitions as database records.** Strehlow, R.A. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014057.

From American Society for Testing and Materials; Cincinnati, OH, USA (21 Jun 1987).

New information technology is being applied to the task of terminology management in ASTM. We visualize an enhancement of product quality, a facility to increase the scope of terminology work, an increased selection of products, and the potential for becoming more appropriately involved in international standardization efforts. Considering the feasibility and costs for the options that are just now becoming evident will provide an exciting technical challenge for some time into the future. Choice of direction will be determined in part by results of the competition for resources that are always too limited. However, the possible rewards are great.

49151 **(DOE/ER—0184/3) Guide for the preparation of applications for the University Research Instrumentation program, 1988.** (USDOE Office of Energy Research, Washington, DC. University and Industry Programs Div.). [1987]. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000231.

The US Department of Energy, Division of University and Industry Programs, Office of Energy Research, invites the submission of applications for its University Research Instrumentation program. This program is intended to help strengthen the ability of universities and colleges to conduct long-range, energy-related research by assisting them in acquiring some of the specialized research instrumentation which is required. All areas of energy research will be eligible. However, in FY 1988 the funds will be used principally to support instrumentation required for advanced research in five major areas: Biological Energy Conversion, Biomedical and Environmental Research, Energy Resource Geoscience Research, Nuclear Physics, and Photochemical Energy Conversion.

49152 **(DOE/MA—0297-2) Quarterly status of Department of Energy projects.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Project and Facilities Management). 30 Jun 1987. 484p. NTIS, PC A21/MF A01; 1; GPO Dep. File Number DE88000280.

This report presents cost and schedule information for all projects in the design or construction phase. The first section in the package is a Summary Report which functions as an index to the detailed Project Report. The Summary Report is followed by a series of variance reports including a Total Estimated Cost (TEC) Report, a Total Project Cost (TPC) Report, and a Schedule Construction or Fabrication Complete Varience Report. The final section is a detailed Project Report which addresses each individual project.

49153 **(DOE/MA—0311) Report to Congress on the Small Business Program of the Department of Energy, FY 1986.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Small and Disadvantaged Business Utilization). Aug 1987. 51p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014996.

The Department of Energy's (DOE) total Fiscal Year 1986 small business achievement was $2.685 billion in prime subcontracts to small businesses. This figure includes awards to disadvantaged and women-owned businesses which are subcategories of small business.

49154 **(ORNL/TM—10495) PCB [polychlorinated biphenyls] annual report for Oak Ridge National Laboratory, 1986.** Barkenbus, B.D.; Puett, T.T.; Sigmon, C.F. (Oak Ridge National Lab., TN (USA)). Jul 1987. Contract AC05-84OR21400. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000002.

Oak Ridge National Laboratory prepares a report annually as mandated by the Toxic Substances Control Act that summarizes records required of owners/operators of facilities where PCBs (polychlorinated biphenyls) are in use. This report provides information on PCB and PCB-contaminated equipment in use and removed from service and PCB wastes generated, stored, and shipped off-site for treatment and disposal during calendar year 1986.

49155 **(SAND—87-1216) Estimating payload internal temperatures and radiator size for multimegawatt space platforms.** Dobranich, D. (Sandia National Labs., Albuquerque, NM (USA)). Aug 1987. Contract AC04-76DP00789. 74p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE88000244.

A conceptual space platform consists of a payload, a power conditioning unit (PCU), and two radiators: the main radiator and a secondary radiator. A computer program was written to determine the required size of the two radiators and the temperatures of the PCU and payload for a given platform power level. An iterative approach is necessary because the required size of the main radiator depends on the size of the secondary radiator and vice versa. Also, the temperatures of the payload and PCU depend on the size of the radiators. The program user can subdivide the two radiators into any number of nodes to increase the accuracy of the radiant heat transfer solution. The use of more nodes also allows better prediction of the nonlinear temperature drop that occurs across the radiators as the working fluid deposits the platform's waste heat in the radiator. View factor expressions are automatically calculated for different choices of the number of nodes. The user can also select different separation distances between the various platform structures. A model is included to couple the radiant and conduction heat transfer that occurs between the payload and its meteoroid shell and between the PCU and its shell. Also, the program allows the use of a refrigerator to cool the payload. If a refrigerator is used, the program determines the amount of additional thermal power needed to run the refrigerator. The results of parametric calculations are included to demonstrate the use of the program.

49156 (ANL/TM—454) The Argonne Materials Order System. Bretscher, M.E.; Dion, D.J.; McCure, L.J.; Venard, J.T.; Caruthers, C.M. (ed.). (Argonne National Lab., IL (USA)). Aug 1987. Contract W-31109-ENG-38. 83p. NTIS, PC A05. File Number DE88000232.

The Argonne Materials Order System (ANL/TM 454) describes the procedures and controls implemented by Argonne National Laboratory for systems contracting. The executive summary (Chapter 1) lists the organizations directly responsible for the operation of the Argonne Materials Order System and gives a broad overview of the functions of the system. Chapter 2 of this document describes in detail how the system works, including internal controls. The appendices contain facsimiles of relevant forms and reports.

49157 (IFE/KR/E—87/001) Validation of techniques for simulating long range dispersal and deposition of atmospheric pollutants based upon measurements after the Chernobyl accident. Transfrontier atmospheric models (TRANSAM). Tveten, U. (Institute for Energy Technology, Kjeller (Norway)). Feb 1987. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752515.

Problem specifications and a time schedule for an international study of computerized simulation of transfrontier atmospheric contamination are presented. Started on the initiative of the Nordic Liaison Committee for Atomic Energy, the study will be based on international measurements after the Chernobyl accident.

49158 (INIS-mf—10957) Bhabha Atomic Research Centre (BARC) annual report 1985-1986. (Bhabha Atomic Research Centre, Bombay (India)). 1987. 84p. NTIS (US Sales Only), PC A05/MF A01. File Number DE87703270.

The research and development (R and D) activities and accomplishments during the financial year 1985-1986 of the Bhabha Atomic Research Centre, Bombay are reported. The BARC is a multidisciplinary laboratory engaged in R and D activities in the field of nuclear energy. The main thrust of the R and D activities of the Centre is aimed at: (1) achieving targets of India's nuclear power programme, (2) indigenisation of the various steps in the nuclear fuel cycle, (3) developing and propagating peaceful applications of nuclear science and technology in the country in fields such as agriculture, medicine and industry, (4) providing scientific support to regulatory functions associated with nuclear facilities and radiation protection activities in the country. The salient features of these R and D activities are described in the chapters entitled: (1) physical sciences, (2) chemical sciences, (3) materials and materials sciences, (4) life sciences, (5) radioisotopes, (6) reactors, (7) fuel cycle, (8) health and safety, (9) electronics and instrumentation, and (10) technical services. A list of publications by the staff-members during the report period is given at the end of each chapter. The R and D activities of the outstation units of BARC, namely, Nuclear Research Laboratory at Srinagar, High Altitude Research Laboratory at Gulmarg, Variable Energy Cyclotron Centre at Calcutta and Gauribidanur Seismic Array near Bangalore are also covered in the report. Other activities of the Centre include technology transfer and manpower training which are also described briefly. (M.G.B.).

49159 (OUP—87-11) Section for nuclear physics annual report, January 1-December 31, 1986. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1987. 65p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87752526.

The experimental activities have in 1986 as in the previous years mainly been centered around the cyclotron laboratory with the SCANDITRONIX MC-35 cyclotron. Most of the nuclear physics experiments have been related to the study of nuclear structure at high temperature. Experiments with the /sup 3/He-beam up to a particle energy of 45 MeV have continued, and valuable information regarding the cooling process in highly excited nuclei has been obtained. Theoretical studies of highly excited nuclei have continued, and there has been a fruitful cooperation between experimental and theoretical physicists.

49160 (RISO-R—543) Department of Energy technology annual progress report, 1 January-31 December 1986. Micheelsen, B.; List, F. (eds.). (Risoe National Lab., Roskilde (Denmark)). Feb 1987. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87752503.

The general development of the Department of Energy Technology at Risoe during 1986 is presented, and the activities within the major subject fields are described in some detail. Lists of staff and publications are included.

49161 (UTNL-R—0192) Report of the research results with University of Tokyo, Nuclear Engineering Research Laboratory's Facilities in fiscal 1985. (Tokyo Univ., Tokai, Ibaraki (Japan). Nuclear Engineering Research Lab.). 1986. 132p. (In Japanese). NTIS (US Sales Only), PC A07/MF A01. File Number DE87703046.

The common utilization of the reactor 'Yayoi' and the electron linear accelerator in the Nuclear Engineering Research Laboratory advanced smoothly in fiscal year 1985. 21 themes using the reactor 'Yayoi' and of the related research and 23 themes using the linear accelerator were carried out, and the excellent results were obtained. As for the Yayoi, after the repair, abnormality was not found at all in the regular inspection, and it has been operated smoothly. As for the linear accelerator, in spite of the occurrence of troubles due to the remarkable secular deterioration after the lapse of ten years, rapid countermeasures were taken, accordingly, the expected machine time was used nearly 100 %. Due to the addition of new themes and the expansion of users, it is difficult to ensure sufficient machine time in the common utilization, but to devise the efficient use in future by putting the peripheral equipment in order and simultaneously carrying out plural themes is the subject. Several cases of the joint experiment with foreign researchers were also carried out. In this report, also eight cases of the short period study meetings held in fiscal year 1985 are included. (Kako, I.).

49162 (UTTAC—51) Annual report of the Tandem Accelerator Center, University of Tsukuba, April 1, 1985-March 31, 1986. (Tsukuba Univ., Sakura, Ibaraki (Japan). Tandem Accelerator Center). 1986. 154p. NTIS (US Sales Only), PC A08/MF A01. File Number DE87703047.

From November, 1985 to January, 1986, the accelerator was shut down for reconstructing and realigning the accelerator tubes. Thereafter, the beam transmission improved considerably, especially for polarized ion beam. The total chain operation time was 2735 hr, and the beam acceleration time was 2254 hr in academic year 1985. A new prebuncher was tested, and improvement was found in the beam width and beam utilization factor. A postbuncher was installed in the high energy beam line, and tested with beam. The construction of a new polarized ion source is in progress. Its ECR positive ion source has been completed and tested. Also a new Wien filter was installed, and the spin filter was calibrated. A new data taking and analyzing system "SHINE" has been developed, and its first version has been completed and used for experimental work. The CAMAC system has been used for the interface between the VAX 11 computer and the electronic modules for data acquisition. The experimental techniques for detectors, nuclear polarization work, heavy ion-induced nuclear physics, the study on charge exchange, the ion-induced emission of secondary electrons, ion backscattering spectrometry, application of Moessbauer effect and NMR and so on are reported. (Kako, I.).

49163 (AD-A—181950/7/XAB) Design and specification of PDL: the prototype dataflow language. Final report. Wolfe, D.J. (Army Military Personnel Center, Alexandria, VA (USA)). May 1987. 141p. NTIS, PC A07/MF A01.

Several converging technologies have reached the point where they can be integrated and used to develop an advanced programming environment for writing parallel programs. These technologies include advanced graphics workstations, models of compu-

tation which can be used for parallel computation, and parallel architectures. Several manufacturers are providing commercially available parallel processing computers with potential for satisfying the performance requirements of many of today's computing problems. Unfortunately, these computers usually do not have adequate, user-friendly programming environments, and the progamming primitives supported by each machine are different. Thus, there is a need for a more-general, user-friendly programming tool. This thesis is concerned with the design and formal specification of a data-flow programming language which supports the simultaneous existence of graphical and textual representations for programs. The features of the language are synthesized from existing data-flow languages. The specification combines three formal specification techniques to formally specify the textual syntax, graphical representation, and semantics of the language. The specification serves as a rigorous, unambigous description of the language.

49164 **(AD-A—182111/5/XAB) Iterative solutions of sparse linear systems on systolic arrays. Technical report.** Melhem, R. (Pittsburgh Univ., PA (USA). Inst. for Computational Mathematics and Applications). Mar 1987. 24p. (ICMA—87-105). NTIS, PC A02/MF A01.

The idea of grouping the non-zero elements of a sparse matrix into few strips that are almost parallel is applied to the design of a systolic accelerator for sparse matrix operations. This accelerator is, then, integrated into a complete systolic system for the solution of large sparse linear systems of equations. The design demonstrates that the application of systolic arrays is not limited to regular computations, and that computationally irregular problems may be solved on systolic networks if local storage is provided in each systolic cell for buffering the irregularity in the data movement and for absorbing the irregularity in the computation.

49165 **(AD-A—182491/1/XAB) Two-dimensional signal processing and storage and theory and applications of electromagnetic measurements. Annual report, 1 January-31 February 1986.** Schafer, R.W.; Paris, D.T. (Georgia Inst. of Tech., Atlanta (USA). School of Electrical Engineering). 1 Jan 1987. 8p. NTIS, PC A02/MF A01.

The supplement consists of a printed table of contents of all papers and theses produced under this contract. Specific topics covered are: digital signal processing, parallel processing architectures, two-dimensional optical storage and processing, hybrid optical/digital signal processing, electromagnetic measurements in time domain, and automatic radiation measurements for near-field and far-field transformations. Microfiche of these papers are available from the corporate author directly.

49166 **(AD-A—182633/8/XAB) Systolic algorithms for the parallel solution of dense symmetric positive-definite Toeplitz systems. Research report.** Ipsen, I.C. (Yale Univ., New Haven, CT (USA). Dept. of Computer Science). May 1987. 24p. (YALEU/DCS/RR—539). NTIS, PC A02/MF A01.

Sponsored in part by Contract DAAL03-86-K-0158.

The most popular method for the solution of linear systems of equations with Toeplitz coefficient matrix on a single processor is Levinson's algorithm, whose intermediate vectors form the Cholesky factor of the inverse of the Toeplitz matrix. However, Levinson's method is not amenable to efficient parallel implementation. In contrast, use of the Schur algorithm, whose intermediate vectors form the Cholesky factor of the Toeplitz matrix proper, makes it possible to perform the entire solution procedure on one processor array in time linear in the order of the matrix. By means of the Levinson recursions it is shown that all three phases of the Toeplitz system solution process - factorization, forward elimination; and backsubstitution - can be based on Schur recursions. This increased exploitation of the Toeplitz structure then leads to more-efficient parallel implementations on systolic arrays.

49167 **(AD-A—182724/5/XAB) ONR (Office of Naval Research) research in distributed reasoning and planning. Interim report, February 1985-February 1987.** Konolige, K.G.; Georgeff, M.P.; Lansky, A.L. (SRI International, Menlo Park, CA (USA). Artificial Intelligence Center). May 1987. 126p. NTIS, PC A07/MF A01.

The goal of the Distributed Reasoning and Planning projects has been to provide fundamental research into the principles upon which a network of intelligent, cooperative computer agents can be based. The motivation for distributed system of intelligent agents arises when we consider problem domains with the following characteristics: 1) The environment is naturally partitioned, either spatially or functionally. An example of the former is a surveillance task in which several different areas must be patrolled; of the latter, assembly tasks in which major subcomponents can be assembled in parallel; 2) Each process's view of the environment is dynamic: other processes may be performing tasks at the same time, and chains of events may result from ongoing natural processes; 3) Each process has partial or imperfect knowledge of the environment; and 4) The cost of communication among processes may be high or the communication channels may be slow, so that there is a significant delay in sending large amounts of information.

49168 **(AD-A—182736/9/XAB) Automation recognition of tracking of objects. Final report, 1 January 1985-31 December 1986.** Aggarwal, J.K. (Texas Univ., Austin (USA). Computer and Vision Research Center). 31 Dec 1986. 24p. NTIS, PC A02/MF A01.

The Computer and Vision Research Center conducts a broad program of research in computer vision, image processing, and architectures for image processing. During the period of this report, several projects were pursued including those on positioning and tracking of objects moving in space, parallel image processing, and 3-D representation and recognition. The results on these six completed projects are briefly presented in this report: Representation of Objects from Range Maps; Hierarchical Data Structures for the Computation of 3-D Information from Multiple Views; Structure and Motion Computation from Point or Line Correspondences in Images; Surface Reconstruction and Representation of 3-D Scenes; Parallel 2-D Convolution on a Mesh-Connected Array Processor; and A Parallel Processing Technique Exploiting Image Parallelism via the Hypercube.

49169 **(CMI-R—862090-8) Aggregation and disaggregation in integer programming problems.** Hallefjord, Aa.; Storoey, S. (Christian Michelsens Inst. for Vitenskap og Aandsfrihet, Bergen (Norway)). Dec 1986. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87753079.

Column aggregation of zero-one programming problems is considered. By relaxing the integer requirements in the aggregated problem, an easy problem results, the solution of which can be used to compute bounds on the loss of accuracy in the objective function value. It is shown how these bounds can be improved by identification of valid inequalities and by exploiting primal degeneracy. A small example is given to illustrate the procedure. 18 references.

49170 **(CMI-R—872090-2) Strong cutting plane algorithm for an assignment problem with side constraints.** Aboudi, R.; Nemhauser, G.L. (Christian Michelsens Inst. for Vitenskap og Aandsfrihet, Bergen (Norway)). Mar 1987. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87753080.

This paper treats an assignment problem with the additional constraints that specified variables are required to be equal to each other. The problem arose in the evaluation of the classroom capacity of a large university. Some classes of facets of the convex hull of the 0-1 solutions are characterized. An algorithm is given for solving the separation problem over the polytope defined by the assignment constraints, the side constraints and a large class of facet defining inequalities. By using this algorithm and the simplex method, it is possible to solve most instances of the problem without branch-and-bound. 9 references, 3 figures.

49171 **(CONF-870984—1-Summ.) An empirical investigation of the use of ranks in πps sampling.** Wright, T. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 4p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87010609.

From 46. session of the International Statistical Institute; Tokyo, Japan (8 Sep 1987).

Let $U_1,U_2,...,U$/sub N/ be the N units of a finite population and let (y/sub i/,x/sub i/) be a vector of nonnegative components associated with the i/sup th/ unit, where the x's are known and the

y's are unknown. A sample of fixed size n(<N) is to be selected to estimate the unknown population total Y = sum of y/sub i/(i = 1,N). Let π/sub i/ be the probability of sample inclusion for the i/sup th/ unit. Many (e.g., Hansen and Hurwitz, 1943, and Brewer and Hanif, 1983) have realized improvements in efficiency by taking π/sub i/ = np/sub i/ where p/sub i/ = x/sub i//sum of x/sub j/(j = 1,N) is a normed measure of size for the i/sup th/ unit. Such plans, called probability proportional to size (πps) sampling plans, can be difficult to execute when sampling is without replacement (wor), particularly when n > 2. When a suitable variable x, which is directly proportional to the variable of interest y, is not available, one may know how to rank units reasonably well relative to the unknown y values before sample selection. When such ranking is possible, we introduce a simple and efficient πpswor sampling plan for general n using the ranks as the known x measures of size.

49172 (CONF-870984—2) Measures of diversity based on fuzzy multinomial distributions. Uppuluri, V.R.R.; Bhargava, T.N. (Oak Ridge National Lab., TN (USA); Kent State Univ., OH (USA)). 1987. Contract AC05-84OR21400. 3p. NTIS, PC A02. File Number DE87010617.

From 46. session of the International Statistical Institute; Tokyo, Japan (8 Sep 1987).

In this paper a fuzzy multinomial distribution is defined. Based on this, the entropy and a quadratic measure of diversity of a multinomial distribution are defined. These are illustrated by a numerical example, and problems for further study are indicated.

49173 (CONF-871101—6) General order nodal transport methods in weighted diamond difference form. Azmy, Y.Y. (Oak Ridge National Lab., TN (USA)). Nov 1987. Contract AC05-84OR21400. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87011117.

From Joint meeting of the American Nuclear Society and the Atomic Industrial Forum; Los Angeles, CA, USA (15 Nov 1987).

49174 (CONF-8704175—1) Machine intelligence applications to securities production. Johnson, C.K. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014569.

From International conference on security documents for the 21st century; San Diego, CA, USA (1 Apr 1987).

The production of security documents provides a cache of interesting problems ranging across a broad spectrum. Some of the problems do not have rigorous scientific solutions available at this time and provide opportunities for less structured approaches such as AI. AI methods can be used in conjunction with traditional scientific and computational methods. The most productive applications of AI occur when this marriage of methods can be carried out without motivation to prove that one method is better than the other. Fields such as ink chemistry and technology, and machine inspection of graphic arts printing offer interesting challenges which will continue to intrigue current and future generations of researchers into the 21st century.

49175 (DOE/DP/40200—48) A generalized EXIT. Pruitt, C. (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 14p. University of Rochester, River Station Road, Rochester, NY 14627. File Number TI87014470.

This paper describes a proposed new FORTH word to replace "EXIT". The new word is called "curly EXIT". The new word is usable within DO loops because it marks the location within the return stack where the proper return address is located. The range of DO loop parameters is limited to non-negative or small unsigned values in the present implementation. (JDH)

49176 (DOE/ER—0341) ESNET [Energy Sciences Network]. (USDOE Office of Energy Research, Washington, DC. Scientific Computing Staff). Jun 1987. 232p. NTIS, PC A11. File Number DE88000009.

This document describes the Energy Sciences Network (ESNET) project which was undertaken by the Scientific Computing Staff during fiscal year (FY) 1986 at the direction of the Director, Office of Energy Research (ER). This document serves as the program plan for the ESNET project and is the result of the effort of the cross program Energy Sciences Network Steering Committee. The ESNET Steering Committee has been charged to codify the overall ER computer network requirements, to document and set priorities for computer networking requirements including performance objectives. Further, this committee has been asked to identify future ESNET functional characteristics, to identify research and development needs for the ESNET, to establish ESNET performance objectives and to define the intrastructure necessary to manage and operate the ESNET facilities.

49177 (DOE/ER/25026—8) Computational methods and software for differential equations and their applications: Annual report, December 1, 1986-November 30, 1987. Gear, C.W.; Skeel, R.D. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Aug 1987. Contract FG02-87ER25026. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014601.

This paper contains the annual report and continuing proposals on computational methods for Differential Equations. The areas of specific consideration are: Parallel and Waveform Methods for ODE and Analysis and Development of ODE Methods. (LSP)

49178 (DOE/ER/25026—11) Parallel methods for ordinary differential equations. Gear, C.W. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Aug 1987. Contract FG02-87ER25026. 31p. (UILU-ENG—87-1754). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014667.

Remarkably few methods have been proposed for the parallel integration of ordinary differential equations (ODEs). In part this is because the problems do not have much natural parallelism (unless they are virtually uncoupled systems of equations, in which case the method is obvious). In part it is because the subproblems arising in the solution of ODEs (for example, the solution of linear equations) are the ones that have provided the challenges for parallelism. This paper surveys some of the methods that have been proposed, and suggests some additional methods that are suitable for special cases, such as linear problems. It then looks at the possible application of large-scale parallelism, particularly across the method. If efficiency is of no concern (that is, if there is an arbitrary number of processors) there are some ways in which the solution of stiff equations can be done more rapidly, in fact, a speed up from a parallel time of $O(N^3)$ to O(logN) for N equations might be possible if communication time is ignored. This is obtained by trying to perform as much as possible of the matrix arithmetic associated with the solution of the linear equations at each step in advance of that step and in parallel with the integration of earlier steps.

49179 (DOE/ER/25026—T1) The development of ODE methods: A symbiosis between hardware and numerical analysis. (Illinois Univ., Urbana (USA)). 1986. Contract FG02-87ER25026. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014925.

The history of the numerical solution of ordinary differential equations is surveyed from its origins three centuries ago up to the early 1970s. The increasing demands for the solution of ODEs, especially for exterior ballistics and celestial mechanics, has been a primary stimulus of and a significant influence on the early development of computers starting with the analog differential analyzers and continuing to the first wired-program digital computers - whose form foreshadowed future developments in parallel computers. At the same time the hardware has, of course, affected the algorithms used, but this has resulted in surprisingly few innovations in numerical techniques. 57 refs.

49180 (DOE/ER/25034—1) SIAM [Society for Industrial and Applied Mathematics] conference on optimization, 18-20, 1987. (Society for Industrial and Applied Mathematics, Philadelphia, PA (USA)). 1987. Contract FG02-87ER25034. 53p. (CONF-8705190—Absts.; CONF-8705191—Absts.). NTIS, PC A04. File Number DE87014493.

From SIAM conference on optimization; Houston, TX, USA (18 May 1987).

This paper contains the abstracts to the SIAM conference on optimization. These abstracts are on algorithms, linear programming, and numerical analysis optimization. (LSP)

49181 (DOE/ER/60420—1, pp 665-680) **Optimizing interpreter for multidimensional products in computational chemistry.** Cole, S.J.; Purvis, G.D. III. (Univ. of Florida, Gainesville). 1986. John Wiley and Sons, Inc., 605 Third Ave., New York, NY 10158. File Number TI87009263. (CONF-8603121—Pt.2).

From Special Sanibel symposium; St. Augustine, FL, USA (8 Mar 1986).

The multidimensional product between an N-dimensional array B and an M-dimensional array C produces an (N + M - 2L)-dimensional array A from the dot-product-like contraction of L pairs of dimensions in B and C. For example, in the multiplication $A(i,j,k,l,...) = \Sigma\ B(i,a,j,b,...)\ C(l,a,b,k,...)$ a,b,... indices a,b,... are contracted, and the remaining indices i,j,k,l,... are mapped from matrices B and C to the target matrix A. They have developed an algorithm, which they incorporated into a program called GENPRD, for interpreting the topological description of a general multidimensional matrix product, optimizing the execution path, and finally evaluating the product. No specific information about the nature of a given product is included in the program. Instead, GENPRD is driven by two tables: one specifies the indices to be contracted and the mapping of the uncontracted indices to the target array; the second one indicates the organization of the arrays in secondary storage. The tables are text files which are read at execution time. The information is then processed to form an optimized set of loops for evaluating the product and performing associated I/O. GENPRD is implemented in a program for quantum-chemical computations using many-body perturbation theory and the coupled-cluster method. This implementation produced code that ran at 90% of the speed of the hand-coded version. Ultimately, GENPRD will reduce the FORTRAN code from 20,000 lines to 2000 lines.

49182 **(DP-MS—87-94) The Savannah River Plant automated office support system network.** Johnson, A.J. (Savannah River Lab., Aiken, SC (USA)). 1987. Contract AC09-76SR00001. 13p. (CONF-8710132—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014203.

From Department of Energy automated office support system conference; Denver, CO, USA (7 Oct 1987).

The Savannah River Plant (SRP) consists of 13 separate operating or administrative facilities or (areas) spread over 300 square miles of a federal reservation. A facility of this size presents unique difficulties to anyone attempting to provide a comprehensive, high-performance automated office support system (AOSS) network. The goal of the SRP AOSS project is to have each of these workers connected to and using the AOSS computer network by the end of 1988. By mid-1987, SRP was one quarter of the way to completing this goal. The fundamental AOSS strategy for SRP is the integration of personal computers with mid-size "departmental" computers located within each plant area with links to the site's mainframe computer systems and offsite databases. This integration is being provided by local area networks (LAN) in each plant area joined via a broadband communications system to form one sitewide internetwork. The SRP site internetwork is used to connect the departmental and mainframe computers together and to provide workstation-to-computer access between plant areas.

49183 **(ITEF—129-1986) Subroutine package for histogram selective filling.** Matsyuk, M.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1986. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703285.

Subroutine package for histogram selective filling developed on using the HBOOK subroutines is described. On the basis of available subroutines a program for statistical processing the data from 3-meter magnetic spectrometer is created. Subroutines are written in FORTRAN and realized at the BESM-6 computer. 4 refs.; 1 tab.

49184 **(LA—10889-M) The cell-coloring computer program user's manual: Version 1.0.** Wheat, B.M. (Los Alamos National Lab., NM (USA)). Sep 1987. Contract W-7405-ENG-36. 107p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE88000194.

The Cell-Coloring Computer Program (CCCP) is an interactive graphic postprocessor designed to produce report-quality color plots of regularly spaced two- and three-dimensional data. Plots from the CCCP can be output to both color and black and white 35-mm film and to Tektronix terminals. Titles and logos can be added to enhance the plots for presentations. The CCCP can also be used to generate 16-mm color movies. The CCCP is used at Los Alamos National Laboratory to graphically analyze results from computer simulations of hypervelocity projectiles striking multilayered targets, as simulated using the LASOIL family of Eulerian hydrodynamic codes. Inputting the LASOIL data into CCCP allows us to scan and assimilate large amounts of information and enables us to display, analyze, and integrate this information with empirical data from other sources. The CCCP also allows selection of portions of the data so that a variety of color plots can be produced. These plots include material locations, contours, pseudo x ray, and three-dimensional perspectives of two-dimensional data. The color intensity of the material plots may be weighted by different data values such as density, pressure, energy, etc. Such color weighting has been useful in showing high- and low-density regions within a material and also in illustrating shock wave propagation across various materials. The CCCP has an extensive list of labels that can be assigned to identify the axis and data types. User-defined labels can also be added. An interactive help package is available to assist in the use of the many commands.

49185 **(LA—11017-M) A CAMAC Knobs Controller for the VAX control computer at LAMPF [Los Alamos Meson Physics Facility].** Smith, W.L. (Los Alamos National Lab., NM (USA)). Sep 1987. Contract W-7405-ENG-36. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014633.

A CAMAC Knobs Controller has been developed for a VAX/VMS computer control system at the Los Alamos Meson Physics Facility (LAMPF). The Knobs Controller allows the facility operators to have slew control of program-selectable, remote-analog set-point channels and to monitor the progress of the control with an alpha-numeric display associated with each knob. This report discusses the hardware characteristics of the Knobs Controller and the system-software requirements for implementing this system.

49186 **(LA-UR—87-2842) Numerical solution of partial differential equations on irregular grids.** Levermore, C.D.; Manteuffel, T.A.; White, A.B. Jr. (Lawrence Livermore National Lab., CA (USA); Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 10p. (CONF-8708128—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014760.

From International symposium on computational fluid dynamics and international conference on computational techniques and applications; Sydney, Australia (24 Aug 1987).

The present paper discusses the order of error in numerical solutions of differential equations. In particular, the effect of size and shape of the grid imposed on the problem is examined. The author concludes that the rate of convergence is the same on an irregular grid as it is on a regular grid in many instances. 10 refs., 4 figs. (JDH)

49187 (LBL-PUB—615, pp A.1-A.18) **TELL-A-GRAF and SPSXS languages.** Colon-Sanchez, J. Sep 1986. NTIS, PC A11/MF A01. File Number DE87012028.

In Lawrence Berkeley Laboratory, Jackson State University, Ana G. Mendez Educational Foundation Consortium: Progress report, October 1985-September 1986.

TELL-A-GRAF is an interactive graphic package written in Fortran that is widely used at Lawrence Berkeley Laboratory for graphic display and for producing hard copy for publications in reports. With TELL-A-GRAF you can realize many types of graphics in the same type of chart. That means that you can produce one

plot chart but with different kind of lines in the configuration aspect. It allows you to realize two different bar charts, the horizontal bar chart and the vertical bar chart. The authors can also produce pie charts. The user can input the labels in English and TELL-A-GRAF can print the same label in Russian, Greek, or Swedish. The SPSSX Batch System is a comprehensive tool for managing, analyzing and displaying data. It has many capabilities; one of them is to be able to input from almost any type of data file and device-independent graphics.

49188 (LBL-PUB—615, pp A.49-A.70) **SPSSX and TELL-A-GRAF-languages.** Padilla-Nevarez, A. Sep 1986. NTIS, PC A11/MF A01. File Number DE87012028.

In Lawrence Berkeley Laboratory, Jackson State University, Ana G. Mendez Educational Foundation Consortium: Progress report, October 1985-September 1986.

Attempts are made to integrate two software packages. They are SPSSX, which is a statistical software package written in COBOL, and TELL-A-GRAF, which is a software package written in FORTRAN. The problem is that there are no software packages available from SPSSX to draw graphics. The only software package available is TELL-A-GRAF graphics package for which the output of SPSSX has to be adapted to.

49189 (LBL-PUB—615, pp A.91-A.145) **Language translation and software maintenance.** Torres, R. Sep 1986. NTIS, PC A11/MF A01. File Number DE87012028.

In Lawrence Berkeley Laboratory, Jackson State University, Ana G. Mendez Educational Foundation Consortium: Progress report, October 1985-September 1986.

An attempt was made to convert a program called WORD2PS.c into a Lex program called WORD2PS.1. WORD2PS is a program which translates documents written in the Word-11 language into the Postscript language. The translation is made up of three phases: first, relevant macro files are determined and read; second, the document is processed, all World-11 commands are recognized and the appropriate Postscript commands are output; third, all literal text are output as Postscript strings. The problem was to rewrite the WORD2PS program written entirely in C language into a program which has sections written in Lex. In Lex WORD2PS or any other program is easier to maintain because extension may be added, sections may be changed and bugs may be fixed with little difficulty.

49190 (LBL-PUB—615, pp A.169-A.179) **Performance analysis of Ethernet.** Francis, P. Sep 1986. NTIS, PC A11/MF A01. File Number DE87012028.

In Lawrence Berkeley Laboratory, Jackson State University, Ana G. Mendez Educational Foundation Consortium: Progress report, October 1985-September 1986.

The Ethernet local area network provides a communication facility for high speed data exchange (e.g., electronic mail, file transfers, remote log-on) among computers and other digital devices located within a moderate-sized geographic area (a radius of 2.5 kilometers). The computers are physically connected by a shielded coaxial cable. Data is transmitted at a rate of 10 million bits per second. This kind of network can support up to 1024 computing devices. Ethernet has been used extensively at Lawrence Berkeley Laboratory (LBL) to interconnect of all of its major computing machines. LBL has two large incompatible local networks. One is DECNET, which comprises mostly Vaxes running the VMS operating system. These speak to each other via DECNET communication procedures (or protocol). The other is a network comprising mainly of Vaxes running UNIX, and they communicate with each other via the TCP/IP protocol. These two networks are connected via gateways and are incorporated into the Internetwork environment. The object of this research is to study the characteristics of the network with a view to identifying those factors which tend to have a negative effect on performance. It is hoped that the results will serve as a basis for making recommendations to allow for more efficient utilization of the network.

49191 (LBL-PUB—615, pp A.181-A.188) **Software maintenance and program conversion.** Holt, R. Sep 1986. NTIS, PC A11/MF A01. File Number DE87012028.

In Lawrence Berkeley Laboratory, Jackson State University, Ana G. Mendez Educational Foundation Consortium: Progress report, October 1985-September 1986.

A Pascal program was translated to BASIC which enables technicians to read the trimcoils of the cyclotron by computer instead of manually. Two small programs were also written to modify the data set of a large program which predicts trimcoils settings for different elements. The large program is called CYDE.

49192 (ORNL—6362, pp 3-13) **Representational issues in machine learning.** Liepins, G.E.; Hilliard, M.R. Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

Classifier systems are numeric machine learning systems. They are machine counterparts to the natural genetic process and learn by reproduction, crossover, and mutation. Much publicity has been attended to their ability to demonstrate significant learning from a random start and without human intervention. Less well publicized is the considerable care that must be given to the choices of parameter settings and representation. Without the proper nurturing environment genetic algorithms are apt to learn very little. This infusion of human intelligence is often discounted, but the choice of appropriate representation forms the core of much of the current genetic algorithm research. This paper will address some of the representational issues from the perspective of two current experiments, one with scheduling and the other with a simulated robot. 10 references, 10 figures.

49193 (ORNL—6362, pp 15-21) **Rewriting system with explanations.** Chen, H.G.; Cockett, J.R.B. Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

This paper reviews the theory of rewriting and describes a program for implementing rewriting systems. To make the explanations of rewritings natural, several facilities must be added to a basic rewriting program. These facilities include: call by name and call by value rewriting, quiet and recursive rewriting, inherited and synthesized attributes. In addition, an accounting system is used to increase efficiency, while metal-level rule specification can be used to provide compact definitions of rewriting rules sharing the same characteristics. 9 references.

49194 (ORNL—6362, pp 23-33) **Proof synthesizer based on the theory of constructions.** Zaionc, M. (Univ. of Alabama, Birmingham). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

In this paper is presented the algorithm for construction the natural deduction proof in the propositional intuitionistic and classical logics. Proofs are constructed as the closed term of the given formula-as-type. The soundness and completeness of this method are proved. 9 references.

49195 (ORNL—6362, pp 35-49) **State estimation in finite stochastic decision trees.** Zrida, J.; Birdwell, J.D.; Cockett, J.R.B. Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

In this paper, stochastic decision trees are introduced, their properties are explored, and they are used to define a class of state estimation problems. The basic manipulations of idempotence, transposition, and repetition, defined for deterministic decision trees, are extended to the stochastic case. A manipulation of a stochastic decision tree not only alters the structure of the calculations can then be viewed in terms of structural manipulations. This fact may be used to solve certain classical state estimation problems, and more generally, to represent probabilistic/uncertain knowledge in expert systems. 13 references, 4 figures.

49196 (ORNL—6362, pp 53-56) **Substitutional pattern matching of clauses in a fuzzy expert system.** Hall, L.O. (Univ. of South Florida, Tampa). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

The problem of determining the schemas contained in mathematical word problems on the fifth to eighth grade level can be solved by the use of a fuzzy expert system. The application requires some unique functionality in the expert system. The schemas can be stated in different manners and different sets of schemas may be used to solve one problem. An existing expert system, Fess, is being enhanced for this application. In order to allow a relatively small amount of general knowledge to be used template implication relations will be provided in the system. Clauses in the relation may match several different facts at an instantiation providing multiple evidence and/or conclusions. Terms in the clause may be substituted for, which provides the template capability. The problem and the solution are discussed in the paper. 16 references.

49197 (ORNL—6362, pp 57-58) **Problems of partial matching of facts in an expert system.** Bouchon, B.; Despres, S. (Universite Paris VI, France). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

An important problem appears when we use the knowledge base of an expert system, dealing with the adequation of observed facts for the premises of the rules given by the expert. In the case where we do not use any ambiquity in the description of situations, the matching of facts characterizing the observation with the situation expressed in the premise of the rule is solved by means of a unification process. To avoid stopping the inference when the observed fact is slightly different from the antecedent of the rule, we can use a fuzzy description of the situations. The fuzzy logic provides a general framework to cope with this king of problem and the generalized modus ponens associated with the fuzzy implication, introduced by L.A. Zadeh, allows partial matching between fact. Several fuzzy implications exist, and enable us to evaluate the strength of an inference involving imprecise antecedent and/or consequent, various combination operators are then available to express the generalized modus ponens. We compare some of them through their behavior in characteristic cases. 10 references.

49198 (ORNL—6362, pp 59-67) **Uncertainty methodologies used in expert systems: synthesis of approaches.** Tonn, B.; Uppuluri, R. Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

Numerous methodologies have been developed to represent and control the propagation and combination of uncertainty in expert systems. Four of the more prominent methodologies are discussed, Bayesian theory, Certainty Factors, Dempster-Shafer Theory, and Endorsement Theory. A subset of rule and conditions endorsements is synthesized with the certainty factor uncertainty propagation method and an altered Dempster-Shafer combination method to produce a new approach. 7 references, 1 table.

49199 (ORNL—6362, pp 69-74) **Non-monotonic derivations which preserve pragmatic truth.** Suchenek, M.A. (Wichita State Univ., KS). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

In the paper, the model-theoretic finite forcing, has been used in the construction of certain well motivated and relatively well behaved non-monotonic logic. Different non-monotonic logics, including the above have then been compared from the reconstructional point of view. 13 references.

49200 (ORNL—6362, pp 77-85) **Provision of induction as a problem solving method in data model systems.** Hartzband, D. (Digital Equipment Corp., Hudson, MA). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

Research currently underway in the Artificial Intelligence Technology Group has focused on the development of a data model that is homomorphic with a human perception of knowledge representation. The development of this model has allowed a model-theoretic approach to be taken toward machine representation and problem solving. The approach taken to problem solving has also focused on methods which are homomorphic with human methods. Considerable work done in psychology cognitive science and decision analysis in the past 20 years has indicated that human problem solving methods are primarily comparative (that is analogic) and proceed by successive refinement of comparisons among known and unknown entities (e.g. Carbonell, 1985; Rummelhart and Abrahamson, 1973; Tversky, 1977). A series of algorithms has been developed to provide analogic (Hartzband et al. 1986) and symmetric comparative induction methods (Hartzband and Holly, in preparation) in the context of the homomorphic data model previously referred to. These general methods can be combined with heuristics and structural information in a specific domain to provide a powerful problem solving paradigm which could enhance human problem solving capabilities. 10 references, 1 table.

49201 (ORNL—6362, pp 87-96) **Interactive system to generate primes and minimal covers from a set of production rules.** Arrowood, L.F.; Cockett, J.R.B. Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

An interactive system has been developed to generate primes for a set of production rules and to find the minimal covers of these primes. Primes are produced by a pairing process similar to resolution which finds all the minimal disjuncts. Before searching for covers, heuristics can be applied to reduce the number of possibilities, thereby accelerating the covering process. The covering algorithm is a sophisticated depth-first search which never explores the same path twice and whose order of search can be heuristically controlled. The system was built to assist in the development of knowledge bases; it makes errors and inconsistencies apparent by producing unexpected conclusions. 7 references, 1 table.

49202 (ORNL—6362, pp 97-107) **Design of a student record.** Rundensteiner, E.A.; Hawkes, L.W. (Florida State Univ., Tallahassee). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

Being able to individualize instruction one way in which an Intelligent Computer-Assisted Instruction System, ICAI, is made more intelligent than a Computer-Assisted Instruction System, CAI. An example of an ICAI system for training children in arithmetic problem-solving called TAPS currently under development is described. Within the framework of TAPS the Student Record component, which is the basis for individualized instruction, is presented. Issues raised during the design process of the Student Record are discussed and possible solutions are proposed. The goal is to develop some general concepts of relevance for the Student Record of any ICAI system. Finally this design is contrasted with the different approaches chosen in the literature toward student modeling. 18 references.

49203 (ORNL—6362, pp 109-116) **Multi-expert expert systems.** Kantor, P.B. (Case Western Reserve Univ., Cleveland, OH). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

The authors consider some of the design constraints that an expert system must satisfy if it is to negotiate with, or have its suggestions combined with those of other expert systems. Two principle variants are considered. In the first variant each system is able to provide cardinal utility evaluations. This permits the implementation of an aggregator based on principles developed by Nelson and Kantor. In the second approach each expert system is able to negotiate, by incorporating into its own knowledge base the fact that one or more other expert systems have disagreed with it. This will

permit implementation of a Delphi approach as proposed by Reisman. 8 references.

49204 (ORNL—6362, pp 119-130) **Syntactic optimization of decision trees.** Herrera, J.A.; Cockett, J.R.B. Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

An algorithm for finding all the irreducible forms of a decision tree is discussed. An irreducible is a syntactic form for a tree which is guaranteed to be optimal for some reasonable cost criterion (for example, an expected testing cost). A crucial step in this procedure is to avoid the generation of forms which are trivial variants of one another. An algorithm to accomplish this is also presented. This algorithm, which is called separation planning, can be applied dynamically, allowing the order of generation of irreducible forms to be controlled by the structure of the initial tree. 26 references.

49205 (ORNL—6362, pp 131-139) **Theory of usuality.** Lee, E.T. (Univ. of Louisiana, Baton Rouge). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

Fuzziness, randomness, probabilistic fuzzy events, fuzzy probabilistic events and linguistic variable approach are briefly discussed. Quantitative measures of usuality and unusuality are defined. According to these measures, it is proved that: (i) For arbitrary fuzzy subsets F and G, the degree to which the union of F and G qualifies to be a usual value of X is greater than or equal to the maximum of μ/usually/ (F) and μ/sub usually/ (G). (ii) For arbitrary fuzzy subsets F and G, the degree to which the intersection of F and G qualifies to be a usual value of X is less than or equal to the minimum of μ/sub usually/ (F) and μ/sub usually/ (G). If J is a subset of K, then it is proved that: (iii) The degree to which the union of J and K qualifies to be a usual value of X is equal to the maximum of μ/sub usually/ (J) and μ/sub usually/ (K) which is equal to μ/sub usually/ (K). (iv) The degree to which the intersection of J and K qualifies to be a usual value of X is equal to the minimum of μ/sub usually/ (J) and μ/sub usually/ (K) which is equal to μ/sub usually/ (J). In addition, it is proved that: (v) The degree to which an arbitrary fuzzy subset F qualifies to be an unusual value of X is equal to μ/sub usually/ (F vector) where F vector is the complement of F. (vi) The degree to which F vector qualifies to be an unusual value of X is equal to μ/sub usually/ (F). With the quantitative measures of usuality and unusuality together with the above theorems, the authors can develop various properties of usual values and construct an inferential system for reasoning with usuality-qualified propositions of the form usually (X is F) and usually (if X is F then Y is G). The results obtained in this paper have useful applications in the management of uncertainty in expert systems, robotics, intelligent systems and other related areas. 11 references.

49206 (ORNL—6362, pp 141-147) **Algebraic versus probabilistic independence in decision theory.** Wong, S.K.M.; Ziarko, W. (Univ. of Regina, Saskatchewan). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

The concept of independence (dependence) between the condition and decision attributes plays an important role in the design of expert systems, decision tables, pattern recognition, and machine learning, etc. However, most of the investigations were devoted almost exclusively to the study of algebraic independence (dependence). The main objective of this paper is to show that the decision-theoretic approach based on algebraic independence is inadequate particularly when one deals with information uncertainty inherent in the knowledge representation system. It is shown that the notion of probabilistic independence is more appropriate to describe attribute independence in decision theory. The probabilistic independence is a stronger condition than the algebraic independence. A statistical measure of the "degree" of independence is proposed. Within this framework, it is demonstrated that the condition and decision attributes can be regarded to be truly independent of each other only if they are uniformly probabilistically independent,i.e. the knowledge of the values of the condition attributes alone do not give us any information about the values of the decision attributes. 3 references.

49207 (ORNL—6362, pp 149-169) **Linguistic similarity relations.** Zhang, W.R.; Bezdek, J.C.; Pettus, R.O. (Univ. of South Carolina, Columbia). Jan 1987. NTIS MF A01 . File Number DE87006025. (CONF-8610193—).

From International colloquia on methodologies for intelligent systems; Knoxville, TN, USA (25 Oct 1986).

First, the authors introduce the notions of Linguistic Fuzzy Relations (LFR), Linguistic Similarity Relations (LSR), and t-Level Sets, which are proposed based on the theory of numerical similarity relations, Zadeh's extension principle, and the term set definitions. Then the concept of Linguistic Transitive Closure (LTC) is proposed. A relation matrix of a LFR has elements which are linguistic terms instead of real numbers in [0,1]. Each linguistic term has one predefined fuzzy subset as a static prototype, and may have an infinite number of approximately matched synonyms. The terms may be subjectively entered to a matrix in a database or derived from linguistic approximation. Algorithms for computing the linguistic transitive closures of the a LFR matrix by extended max-min, extended max-product, and extended max-Δ are described. A number of interesting features of Linguistic Similarity Relations and Linguistic Transitive Closures are identified and illustrated by computational examples. 18 references, 3 figures, 4 tables.

49208 **(ORNL—6393) IMPSOR: A fully vectorized FORTRAN code for three dimensional moving boundary problems with Dirichlet or Neumann boundary conditions.** Williams, W.A.; Wilson, D.G. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 38p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014964.

This report documents IMPSOR, a FORTRAN code that implements finite difference methods for multidimensional moving boundary problems with Dirichlet or Neumann boundary conditions on a Cray X-MP. The geometry of the spatial domain is a rectangular parallelepiped. The dimensions of the parallelepiped are specified by the user. Dirichlet or Neumann boundary conditions may be specified on each face of the box independently. The initial conditions are arbitrary. The user defines the initial and boundary conditions as well as the thermal and physical properties of the problem. Additionally, several parameters of the numerical method, e.g., degree of implicitness, time step size, are also specified by the user.

49209 **(ORNL/TM—9912) A collection of test problems for ordinary differential equation solvers which have provisions for rootfinding.** Thompson, S. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000045.

Several popular ordinary differential equation (ode) solvers contain provisions for locating roots of functions which depend on the solution of the ode. A collection of problems for testing such solvers is described in this report. In addition to several well-known problems, the collection contains other interesting problems which have not previously appeared in the literature.

49210 **(ORNL/TM—10434) Implementation and evaluation of several continuously imbedded methods of Sarafyan.** Thompson, S. (Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000025.

Several of Sarafyan's continuously imbedded methods have been implemented and evaluated. This study discusses several important implementation questions and presents results that demonstrate the effectiveness of the resulting software. The results indicate that Sarafyan's methods are well-suited for the solution of ordinary differential equations requiring rootfinding to handle special events and interpolation for dense output. The results further indicate that the software based on several of the higher order methods

is competitive with other widely-used general purpose Runge-Kutta software.

49211 **(ORNL/TM—10498) Personal and organizational consequences of microcomputer use in the Naval Military Personnel Command.** Morell, J.A. (Oak Ridge National Lab., TN (USA)). Jul 1987. Contract AC05-84OR21400. 54p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE88000003.

This study is a preliminary effort to both determine the impact of microcomputer use within the N4 (detailing) branch of the Naval Military Personnel command and develop a methodology for making further assessments on a wider scale. The study found three main areas of impact of microcomputer use: budgeting, nonfiscal planning, and time savings. In the budgeting area, small work groups were able to keep better track of available funds, and to make more accurate estimates of funds that would be available in the future. As a result there was better cooperation between detailing groups and those with financial oversight responsibilities. Also, work was better paced to the availability of funds. Improvements in nonfiscal planning centered on the use of more and better information for planning and decision making. The primary advantages of "time savings" were allowing people to do new tasks and giving people opportunities to do better analyses of problems. Overall, these impacts was highly positive, and there were no serious negative consequences.

49212 **(PNL—6279-Vol.3) Hanford Meteorological Station computer codes: Volume 3, The TANK computer code.** Buck, J.W.; Andrews, G.L. (Pacific Northwest Lab., Richland, WA (USA)). Sep 1987. Contract AC06-76RL01830. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014808.

At the end of each graveyard shift the Hanford Meteorological Station (HMS), operated by Pacific Northwest Laboratory, issues a forecast of eight hourly average wind speeds and wind gusts for the 50-ft level. The Hanford Waste Management crew uses this forecast, called the tank farm forecast, to schedule daily work loads. The forecast covers an 8-hour period [0800 to 1600 during Pacific Standard Time (PST) or 0700 to 1500 during Pacific Daylight Time (PDT)] and the day-shift forecaster may modify the tank farm forecast to reflect changing wind conditions. The TANK computer code is used to archive these forecasts and apply quality assurance checks to the forecast data. The code accesses an input file, which contains the date of the previous forecast, and an output file, which contains tank farm forecasts for the current month. The program includes a data entry form consisting of 12 fields that must be filled in by the user. The information entered on the form is appended to the monthly forecast file, which provides an archive for the tank farm forecasts. This volume describes the implementation and operation of the TANK computer code at the HMS.

49213 **(PNL—6279-Vol.4) Hanford Meteorological Station computer codes: Volume 4, The SUM computer code.** Andrews, G.L.; Buck, J.W. (Pacific Northwest Lab., Richland, WA (USA)). Sep 1987. Contract AC06-76RL01830. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000311.

At the end of each swing shift, the Hanford Meteorological Station (HMS), operated by Pacific Northwest Laboratory, archives a set of daily weather observations. These weather observations are a summary of the maximum and minimum temperature, total precipitation, maximum and minimum relative humidity, total snowfall, total snow depth at 1200 Greenwich Mean Time (GMT), and maximum wind speed plus the direction from which the wind occurred and the time it occurred. This summary also indicates the occurrence of rain, snow, and other weather phenomena. The SUM computer code is used to archive the summary and apply quality assurance checks to the data. This code accesses an input file that contains the date of the previous archive and an output file that contains a daily weather summary for the current month. As part of the program, a data entry form consisting of 21 fields must be filled in by the user. The information on the form is appended to the monthly file, which provides an archive for the daily weather summary. This volume describes the implementation and operation of the SUM computer code at the HMS.

49214 **(PNL—6317) PCDAS Version 2.2: Remote network control and data acquisition.** Fishbaugher, M.J. (Pacific Northwest Lab., Richland, WA (USA)). Sep 1987. Contract AC06-76RL01830. 139p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87014823.

This manual is intended for both technical and non-technical people who want to use the PCDAS remote network control and data acquisition software. If you are unfamiliar with remote data collection hardware systems designed at Pacific Northwest Laboratory (PNL), this introduction should answer your basic questions. Even if you have some experience with the PNL-designed Field Data Acquisition Systems (FDAS), it would be wise to review this material before attempting to set up a network. This manual was written based on the assumption that you have a rudimentary understanding of personal computer (PC) operations using Disk Operating System (DOS) version 2.0 or greater (IBM 1984). You should know how to create subdirectories and get around the subdirectory tree.

49215 **(RFP—4104) Personal computers: A powerful tool for project management.** Hughes, T.A. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). 1987. Contract AC04-76DP03533. 11p. (CONF-871028—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013381.

From Instrument Society of America international conference and exhibit; Anaheim, CA, USA (5 Oct 1987).

Availability of low cost hardware and software within the past few years has made the Personal Computer a powerful tool for Project Management. Project managers very effectively apply word processing, cost accounting spreadsheets, and data management software to make their jobs easier. An important aspect of personal computers lies in their ability to improve productivity of the project design team. Project information can now be gathered, stored, and presented in a more useful form. Direct benefits are the detecting of cost overruns and scheduling problems through improved data analysis. This paper will discuss the use of Personal Computers in cost analysis, planning, tracking, and controlling instrumentation projects. Practical applications will be discussed and the advantages and disadvantages of available software will be reviewed.

49216 **(SAND—87-1380C) The method of lines for time dependent free boundary problems.** Womble, D.E. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 40p. (CONF-8709123—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013929.

From NASIG meeting; Truckee, CA, USA (21 Sep 1987).

The method of lines is used to semi-discretize a time dependent free boundary problem. The resulting ordinary differential equations are solved and an approximate solution to the continuous problem is constructed. In the case of the moving contact problem, a variational inequality form of the problem exists and the variational inequality can be used to prove the convergence of the approximate solution to the true solution. As a numerical example, the solidification of a binary alloy natural convection is presented. 14 refs.

49217 **(SOL—87-11) An analysis of an available set of linear programming test problems.** Lustig, I.J. (Stanford Univ., CA (USA). Systems Optimization Lab.). Aug 1987. Contract FG03-87ER25028;FG03-87ER25030. 55p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014578.

A set of linear programming test problems is analyzed with MINOS, Version 5.1. The problems have been run with different options for scaling and partial pricing to illustrate the effects of these options on the performance of the simplex method. The results indicate that the different options can significantly improve or degrade the performance of the simplex method, and that these options must be chosen wisely. For each problem a picture of the nonzero structure of the matrix A is also presented so that the problems can be classified according to structure.

49218 (UCID—21159) The Livermore Loops in Sisal. Feo, J.T. (Lawrence Livermore National Lab., CA (USA)). 26 Aug 1987. Contract W-7405-ENG-48. 80p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE88000441.

The Livermore Loops are 24 computational kernels found frequently in large-scale scientific computations. Sisal is a functional language being developed at Lawrence Livermore National Laboratory, to provide a programming medium in which to express large-scale scientific processes for execution on multiprocessor systems comprising hundreds, even thousands, of processors. For Sisal to be successful, it must express clearly and concisely the parallelism found most frequently in scientific computations. We present and discuss a Sisal implementation of the Loops from both a programming and execution viewpoint. In addition, we given the parallel execution traces of all 24 loops as simulated by our interpreter. 14 refs.

49219 (UCRL—96080) Layering central authentication on the interactive services of an existing homogeneous distributed system. Nessett, D.M. (Lawrence Livermore National Lab., CA (USA)). Feb 1987. Contract W-7405-ENG-48. 21p. (CONF-871141—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011544.

From Symposium on operating systems principles; Austin, TX, USA (9 Nov 1987).

Provision of interactive terminal service in a distributed system requires mechanisms to establish and disestablish a terminal session (i.e., to logon and logoff) as well as to move textual data between the terminal host and remote host. Logon occurs in most distributed systems subsequent to the establishment of a terminal session by means of host specific logon procedures. However, in a distributed system of any size, this approach leads to security and password management problems. When the distributed system is homogeneous, these problems can be rectified through the use of a central authentication service that presents a common logon interface to the user for all distributed system hosts. Normally, central authentication is provided by either initially designing it into a distributed system or supporting it through the modification of existing distributed system and host operating system software. As an alternative strategy, central authentication can be layered onto the existing interactive terminal services of a distributed system. An experiment to assess the feasibility of this approach was carried out. The results demonstrate that layering can be used in certain circumstances to provide central authentication services. The experiment also determined what terminal service features are necessary so that central authentication is easily added to a distributed system. Recommendations are made concerning how to structure terminal services in a distributed system so that central authentication is effectively achieved.

49220 (UCRL—96707) The Macintosh computer as a tool for rapid data analysis and for producing camera ready viewgraphs/publications. Beiriger, J.M. (Lawrence Livermore National Lab., CA (USA)). Aug 1987. Contract W-7405-ENG-48. 5p. (CONF-871061—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014350.

From 33. annual bioassay analytical and environmental radiochemistry conference; Livermore, CA, USA (6 Oct 1987).

The graphics capability of the Macintosh computer has been utilized for plotting of experimental data for analysis. The Macintosh has also been used in producing viewgraphs.

49221 (UCRL—96730) ISLE [Image and Signal Lisp Environment]: A functional language interface for signal and image processing. Azevedo, S.G.; Fitch, J.P. (Lawrence Livermore National Lab., CA (USA)). May 1987. Contract W-7405-ENG-48. 6p. (CONF-871162—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013785.

From 21. annual asilomar conference on signal, systems, and computers; Pacific Grove, CA, USA (2 Nov 1987).

Conventional software interfaces which utilize imperative computer commands or menu interactions are often restrictive environments when used for researching new algorithms or analyzing processed experimental data. We found this to be true with current signal processing software (SIG). Existing "functional language" interfaces provide features such as command nesting for a more natural interaction with the data. The Image and Signal Lisp Environment (ISLE) will be discussed as an example of an interpreted functional language interface based on Common LISP. Additional benefits include multidimensional and multiple data-type independence through dispatching functions, dynamic loading of new functions, and connections to artificial intelligence software.

49222 Telerobotic technology for nuclear and space applications. Herndon, J.N.; Hamel, W.R. (Oak Ridge National Lab., TN). *AIAA Paper;* 13(Mar 1987). (AIAA-Paper—8-1690; CONF-870395—).

From American Institute of Astronautics and Aeronautics, National Aeronautics and Space Administration and U.S. Air Force (AIAA/NASA/USAF) symposium on automation, robotics and advanced computing for the N; Arlington, VA, USA (9 Mar 1987).

Developments in telerobotics applicable to nuclear and space environments are discussed. The advanced servomanipulator (ASM) slave arm force-reflected servomanipulators designed for modular remote maintainability of the Advanced Integrated Maintenance System is examined. Consideration is given to the master controller, transporter, interface package, operator control station, and the control system for the ASM arm. A prototype of a telerobot capable of performing the activity of an astronaut during EVA is developed. The mechanical and control system features of the telerobot are described. 10 references.

49223 Improved statement of optimality for sequential probability ratio tests. Simons, G. (Univ. of North Carolina, Chapel Hill). *Annals of Statistics;* 4: No. 6, 1240-1243(1976).

An improved version of the optimality property of sequential probability ratio tests is described. Alternatives to error probabilities, as measurements of precision, are suggested. 6 references.

9903 Information Handling

REFER ALSO TO CITATION(S) 47440, 48091, 49165, 49215

49224 (CONF-8710147—1) The impact of information technology on research in science and engineering. Morell, J.A. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 29p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE88000342.

From Howard R. Davis Society for knowledge utilization; Pittsburgh, PA, USA (9 Oct 1987).

There is little research on the impact of information technology (IT) on how research is carried out by scientists and engineers. This paper draws on other bodies of writings which indirectly shed light on this question. Included are: the role of calculation in research, scientific productivity, the philosophical underpinnings of science and technology, systems analysis, and the use of computer aided design in engineering. A model is developed which helps identify the types of impact that IT may have on social system and epistemological aspects of research. Factors are hypothesized which may explain why IT may have particular effects in any given research endeavor.

49225 (DOE/TIC—7000-R7) Energy Data Base: Subject Thesaurus. Raridon, M.H. (ed.). (USDOE Office of Scientific and Technical Information, Oak Ridge, TN). Sep 1987. 1027p. NTIS, PC A99/MF A01; 1; GPO Dep. File Number DE87008007.

This seventh edition of the subject thesaurus contains the standard vocabulary of indexing terms (descriptors) developed and structured by the technical staff of the Office of Scientific and Technical Information as part of its subject indexing activities for building and maintaining the Energy Data Base (EDB) and other energy information data bases for the Department of Energy (DOE). The purpose of this thesaurus is to enhance the efficiency of information retrieval from these data bases. This structured vocabulary reflects the scope of DOE's research, development, and technological programs and encompasses terminology derived not only from the basic sciences for also from areas of energy resources, conservation, ıfety, environmental impact, and regulation. There are 21,080 valid descriptors and 5683 forbidden terms in this edition of the Thesaurus. These descriptors are listed alphabetically.

49226 (DP-MS—87-92) Automated office support systems Savannah River Plant site summary. Stanland, C.F. (Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Plant). 1987. Contract AC09-76SR00001. 7p. (CONF-8710132—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014122.

From Department of Energy automated office support system conference; Denver, CO, USA (7 Oct 1987).

In January of 1985, du Pont management commissioned a study of how the long-term information needs of the site could be met. The result of this study was a 10-year plan calling for the implementation of a sitewide information system which would include: extensive local area networks, personal computers in all work locations, direct workstation to workstation and workstation to central computing facility access, and Office Automation and CAD/CAM computers. In late 1985, the Computer Projects Department (CPD) was formed to address the recommendations of the information system plan. The primary goal of CPD was to procure and install personal and office computers and the networks necessary to tie them together. This paper contains a description of the progress made to date toward these goals.

49227 (K/CSD/INF—87/10) IDMS application documentation made easy. Crisp, R.L.; Ratliff, J.M.; Thomas, P.B. (Oak Ridge Gaseous Diffusion Plant, TN (USA)). Apr 1987. Contract AC05-84OR21400. 61p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE88000199.

This report is written for the knowledgeable IDMS user to describe the methods and standards adopted by the EMIS section for the continuing documentation of the IDMS-based Engineering Management Information System. The methods and standards developed are based around using the Cullinet IDMS Integrated Data Dictionary (IDD) facility to maintain system documentation as an integral part of the system software. The documentation procedures described represent a relatively pain-free way to maintain system documentation and provide for complete, quality-assured documentation that is kept up-to-date as the application evolves. It also provides a readily available storehouse of system information which is useful for training new staff members, providing information needed for system enhancements, and for providing for users technical consultation on system functions.

49228 (ORNL/TM—10520) Implementing and managing change: A guide for assessing information technology. Morell, J.A.; Gryder, R.; Fleischer, M. (Center for Social and Economic Issues, Ann Arbor, MI (USA); Oak Ridge National Lab., TN (USA)). Aug 1987. Contract AC05-84OR21400. 100p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE88000035.

Assessing the impact of office automation (OA) requires expertise in the generic aspects of evaluation and innovation adoption, combined with specialized knowledge of OA. There is an extensive literature on the two generic subjects, but no companion literature concerning the application of the knowledge to the unique case of OA. By providing that specialized information, this report assists the implementors of OA in two ways: it shows them how to monitor implementation efforts, thus providing feedback to facilitate adoption of OA technology; and it provides guidance for measuring OA's impact on people and organizations. The report assumes an immediate impact of OA on the work groups where the technology is implemented, and a continually spreading effect from that locus of immediate use. Included in the report are discussions of: sources of data, methods of data collection, factors which affect implementation, and measures of impact. Special attention is given to measuring productivity changes that may result from the use of OA. A detailed appendix supplies a variety of examples which show how the variables discussed in the report were actually measured in applied settings.

9905 Civilian Defense

49229 (AD-A—182508/2/XAB) Vulnerability evaluation of the keyworker blast shelter. Final report. Slawson, T.R. (Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Structures Lab.). Apr 1987. 124p. (WES/TR/SL—87-10). NTIS, PC A06/MF A01.

The 100-man keyworker blast shelter that survived MINOR SCALE (a high explosive event) was retested using the High Explosive Simulation Technique (HEST) in August 1986. The test was conducted at White Sands Missile Range, N. Mex. The existing structure sustained minor damage (1/8-inch permanent midspan deflection) during MINOR SCALE at the predicted 75-psi peak overpressure level, and a retest was proposed to investigate the shelter's large deformation behavior. The shelter was tested using a 1-MT nuclear weapon simulation at 130- to 16-psi (depending on the duration of the simulation). The shelter survived the test with large plastic roof deformations ranging from 8 to 17 inches at roof midspan. The failure mode of the shelter roof was very ductile, and the shelter had adequate reserve capacity to withstand large deformations without catastrophic failure. Survivability of occupants and mechanical equipment at this overpressure was investigated. The mechanical equipment inside the shelter was fully functional after the test except for the roof-mounted fluorescent-light fixtures. Instructure shock was within acceptable limits for shelter occupants, and high-speed movies of the mannequin movement reinforced this conclusion. Based on this test result, it is concluded that the shelter performed as designed in the buried configuration under ideal backfill conditions. Additional scale-model tests validated the shelter design in the bermed configuration and in various backfill types.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Evaluation of utility-boiler radiant furnace residence time/temperature characteristics: field tests and heat-transfer modeling. Final report, October 1982-September 1985, 12:47352 (R;US)
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)
Two-dimensional modeling of fossil-fueled power plant behavior when using CO_2-O_2 or CO_2-H_2O-O_2 mixtures, instead of air, to support combustion, 12:47054 (R;US)

Energy Systems Associates, Tustin, CA (USA)
Natural gas/pulverized-coal cofiring performance testing at an electric-utility boiler. Topical report, June-October 1986, 12:47353 (R;US)

Entropy Environmentalists, Inc., Research Triangle Park, NC (USA)
Performance audit procedures for opacity monitors, 12:48356 (R;US)

Environmental Protection Agency, Ann Arbor, MI (USA)
Compilation of air-pollutant-emission factors. Volume 2. Mobile sources (4th edition), 12:48346 (R;US)

Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab.
Cadmium speciation in aquatic-life flow-through bioassay diluters, 12:48430 (R;US)

Environmental Protection Agency, Las Vegas, NV (USA). Office of Radiation Programs
Estimates of population distributions and tailings areas around licensed uranium mill sites. Final report, 12:47240 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Atmospheric Sciences Research Lab.
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
International Sulfur Deposition Model Evaluation (ISDME), 12:48365 (R;US)
Role of nitrogen oxides in nonurban ozone formation in the planetary boundary layer over N (North) America, W (Western) Europe, and adjacent areas of ocean, 12:48357 (R;US)
Turbulent diffusion behind vehicles: experimentally determined turbulence mixing parameters, 12:48355 (R;US)
Wind transport of scalars and pollutants, 12:48335 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Environmental Sciences Research Lab.
Relationships involving fine-particle mass, fine-particle sulfur, and ozone during episodic periods at sites in and around St. Louis, Missouri, 12:48361 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Monitoring and Data Analysis Div.
Protocol for applying and validating the CMB (chemical mass balance) model, 12:48348 (R;US)
Protocol for reconciling differences among receptor and dispersion models, 12:48349 (R;US)

Environmental Protection Agency, Research Triangle Park, NC (USA). Office of Air Quality Planning and Standards
PM10 SIP (State Implementation Plan) development guideline, 12:48399 (R;US)

Environmental Protection Agency, Washington, DC (USA)
Superfund Record of Decision (EPA Region 4): A. l. Taylor site (Valley of the Drums), Bullitt County, Kentucky, June 1986. Final report, 12:48413 (R;US)
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)
Superfund Record of Decision (EPA Region 1): Baird and McGuire, Holbrook, Massachusetts, September 1986. Final report, 12:48415 (R;US)
Superfund Record of Decision (EPA Region 3): Bruin Lagoon Site, Bruin Borough, Pennsylvania (second remedial action), September 1986. Final report, 12:48444 (R;US)
Superfund Record of Decision (EPA Region 3): Drake Chemical Site (Phase 2), Lock Haven, Clinton County, Pennsylvania (second remedial action), May 1986. Final report, 12:48445 (R;US)
Superfund Record of Decision (EPA Region 2): Florence Land Recontouring (FLR) landfill, Florence, Mansfield, and Springfield, New Jersey, June 1986. Final report, 12:48412 (R;US)
Superfund Record of Decision (EPA Region 4) Gallaway Ponds Site, Gallaway, Tennessee, September 1986. Final report, 12:48448 (R;US)
Superfund Record of Decision (EPA Region 5): Lake Sandy Jo/M and M landfill, Lake County, Indiana, September 1986. Final report, 12:48414 (R;US)
Superfund Record of Decision (EPA Region 2): Lang Property, Pemberton Township, New Jersey, September 1986. Final report, 12:48447 (R;US)
Superfund Record of Decision (EPA Region 2): Marathon Battery Company site, Cold Spring, Putnam County, New York, September 1986. Final report, 12:48449 (R;US)
Superfund Record of Decision (EPA Region 6): Odessa Chromium 1, Odessa, Texas, September 1986. Final report, 12:48446 (R;US)

Environmental Protection Agency, Washington, DC (USA). Office of Solid Waste and Emergency Response
Permit guidance manual on unsaturated zone monitoring for hazardous-waste land-treatment units. Final report, 12:48418 (R;US)
Study of joint use of vehicles for transportation of hazardous and nonhazardous materials. A report to Congress, 12:47585 (R;US)

ERE Systems Ltd., Arlington, VA (USA)
Barrow Arch transportation-systems impact analysis. Social and economic studies program technical report number 104. Final report, 12:47159 (R;US)

Erevanskij Fizicheskij Inst. (USSR)
Exotic baryon resonances. Modern status. Possibilities to search and investigate, 12:48750 (R;SU)
Investigation of electrons with /sup 6/Li, /sup 9/Be, /sup 12/C, /sup 28/Si nuclei in the region of quasi-elastic peak and δ/sub 33/-resonace, 12:48868 (R;SU;In Russian)

Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Medizinische Fakultaet
Investigations into the oxygen effect during the radiolysis of serum albumin with the help of SDS-polyacrylamide gel electrophoresis, 12:48029 (R;DE;In German)

Essen Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich Energie-, Verfahrens- und Elektrotechnik
Investigation of the design and thermal behaviour of a core catching device for a light water reactor, 12:47473 (R;DE;In German)

Evans, Carey and Crozier, Bakersfield, CA (USA)
Naval Petroleum Reserve No. 2: Buena Vista Oil and Gas Field, Kern County, California: Proved reserves, Developed and undeveloped, Sections 6 and 8: Development history and exploitation techniques, Effective July 1, 1987: [Final technical report], 12:47133 (R;US)

Exxon Research and Engineering Co., Annandale, NJ (USA)
Effects of impurities on domain growth, 12:47899 (R;US)

F

Federal Aviation Administration, Atlantic City, NJ (USA). Technical Center
Laboratory characterization tests for antimisting fuel. Final report, 12:47138 (R;US)

Fermi National Accelerator Lab., Batavia, IL (USA)
Excited quark production at hadron colliders, 12:48827 (R;US)
Modelling microprocessor farms for SSC [Superconducting Super Collider] data acquisition, 12:48201 (R;US)

Finnish Centre for Radiation and Nuclear Safety, Helsinki. Dept. of Nuclear Safety
Operation of Finnish nuclear power plants. 3. Quarterly report 1986, 12:47409 (R;FI)

Florida State Univ., Tallahassee (USA)
Octupole instability in the heavy barium region, 12:48902 (R;US)

Florida State Univ., Tallahassee (USA). Inst. of Molecular Biophysics
Energy transformation in molecular electronic systems: Research progress report for the period December 1, 1986-November 30, 1987, 12:47985 (R;US)

Florida Univ., Gainesville (USA)
US Department of Energy Nuclear Energy University program in robotics for advanced reactors: Program plan, FY 1987-1991, 12:48094 (R;US)

Florida Univ., Gainesville (USA). Dept. of Physics
Coset representation of closed loop space in string field theory, 12:48846 (R;US)
Exotic (E_8) particles in e^+e^- annihilation, 12:48780 (R;US)
Studies of heavy fermion systems: Progress report, July 1, 1986-December 31, 1987, 12:49009 (R;US)

Foersvarets Forskningsanstalt, Stockholm (Sweden)
Adaptive capacity of energy systems. Risks of long-range engagements. Method of analysis and results, 12:47575 (R;SE;In Swedish)

Forest Service, Portland, OR (USA). Pacific Northwest Forest and Range Experiment Station
Reducing losses of nitrogen from duff consumption by prescribed fire in Douglas-fir/western hemlock clearcuts: Final report, 12:48401 (R;US)

Foster-Miller, Inc., Waltham, MA (USA)
Turbine protection system evaluation: Final report, 12:47435 (R;US)

G

General Electric Co., Cincinnati, OH (USA). Aircraft Engine Business Group
Antimisting fuel (AMK) flight degrader development and aircraft-fuel-system investigation. Final report, March 1983-December 1985, 12:47141 (R;US)

General Electric Co., Schenectady, NY (USA). Turbine Technology Lab.
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)

Georgia Inst. of Tech., Atlanta (USA). School of Electrical Engineering
Homeostatic utility controls applied to TVA: Final project report, 12:47354 (R;US)
Two-dimensional signal processing and storage and theory and applications of electromagnetic measurements. Annual report, 1 January-31 February 1986, 12:49165 (R;US)

Georgia Inst. of Tech., Atlanta (USA). School of Geophysical Sciences
Atmospheric nitrogen oxides: their detection and chemistry. Second-year report, August 1, 1984-August 31, 1985, 12:48369 (R;US)

Georgia Inst. of Tech., Atlanta (USA). School of Physics
The structure and reactivity of heterogeneous surfaces and study of the geometry of surface complexes: Progress summary, January 1, 1987-December 31, 1987, 12:48992 (R;US)

Georgia Inst. of Tech., Atlanta (USA). School of Textile Engineering
Application of chemicals to substrates without the use of liquids: Solid-on-solid (SOS) processing: Final technical report, August 1, 1984-July 31, 1986, 12:47670 (R;US)

Georgia Univ., Athens (USA). Dept. of Physics
Excitations during collisionally-induced electron detachment of negative ions. Final report, 1 August 1983-31 December 1986, 12:48699 (R;US)

Georgia Univ., Sapelo Island (USA). Marine Inst.
Environmental research on actinide elements, 12:48408 (R;US)

Gesellschaft fuer Reaktorsicherheit m.b.H. (GRS), Koeln (Germany, F.R.)
Recent findings about the Chernobyl reactor accident. Pt. 1 and 2. Pt. 1: Summary and evaluation of information provided on the plant and the course of the accident. Pt. 2: Radiological repercussions in the Federal Republic of Germany and other European countries. As of October 1986, 12:47471 (R;DE;In German)

Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)

GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.)
Investigation of material transport and load in tidal rivers, 12:48427 (R;DE)
Measurement of the turbulent impulse- and salt transport in the mixing zone of the river Elbe, 12:48428 (R;DE;In German)
Weld joint properties at hyperbaric MIG/MAG welding, 12:47818 (R;DE)

GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.). Inst. fuer Physik
Investigation of material transport and load in tidal rivers, 12:48427 (R;DE)
Measurement of the turbulent impulse- and salt transport in the mixing zone of the river Elbe, 12:48428 (R;DE;In German)

Goettingen Univ. (Germany, F.R.). Inst. fuer Physikalische Chemie
Investigation of the degradation rate of selected reference chemicals in the troposphere. Final report, 12:48333 (R;DE;In German)

Golder Associates, Inc., Lakewood, CO (USA)
Draft Underground Test Plan for site characterization and testing in an exploratory shaft facility in salt, 12:47207 (R;US)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii
Antineutrino flux from power reactor, 12:47418 (R;SU;In Russian)
Mathematical models of plasma discharge control in a tokamak, 12:49066 (R;SU;In Russian)

On possibility of the μHe/sup +/(2s1/2)He/sub 4/ and μHe/sup +/(2s1/2)He/sub 6/ symmetrical complex production in helium atmosphere, 12:48718 (R;SU;In Russian)
Performance of nuclear fuel breeding in fast sodium reactors with heterogeneous cores, 12:47422 (R;SU;In Russian)
Self-consistent description of magic nucleus properties by method of effective energetic functional of density, 12:48905 (R;SU;In Russian)
Technique and code for calculation of unsteady two-dimensional temperature fields in a cylindrical fuel element, 12:47417 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki

Adaptation of the GERA computer code for spatial reconstruction of events for the ES computer, 12:48251 (R;SU;In Russian)
A-dependence of conversed particles in high energy hadron-nucleus interactions, 12:48814 (R;SU;In Russian)
Admissible errors of parameters of a focusing channel of an induction linac with intense electron beam. 1. Conditions for beam-focusing channel matching and envelope oscillations, 12:48190 (R;SU;In Russian)
Analytical anomaly and heterotic string in the formalism on continual integration, 12:48850 (R;SU)
Angular correlations of particles produced in the π/sup -/p->K/sup 0/π/sup +-/ +X, π/sup -/p->K/sup 0/K/sup 0/-bar+X, π/sup -/p->K/sup 0/Λ+X reactions at 4.5 GeV/c momentum, 12:48815 (R;SU;In Russian)
Approximation for annihilation neutrino radiation power, 12:48557 (R;SU;In Russian)
21-bit digital-to-analog converter and its calibration technique, 12:48146 (R;SU;In Russian)
Charged particle identification in an experiment with nuclear photoemulsion as a vertex detector, 12:48246 (R;SU;In Russian)
Correlations of cumulative hadrons in hadron-nuclear interactions, 12:48761 (R;SU;In Russian)
Data acquisition system of a calorimetric bench, 12:48206 (R;SU;In Russian)
Description of a class of superstring compactifications related to semi-simple Lie algebras, 12:48851 (R;SU)
Deuteron production and space-time characteristics of high-energy hadron-nucleus reactions, 12:48922 (R;SU)
Dibaryon resonance 2.9 GeV in elastic backward π/sup -/d scattering, 12:48820 (R;SU)
Elastic pp scattering in the Coulomb-nuclear interference region and low energy behaviour of p-barp scattering partial amplitudes, 12:48821 (R;SU)
Error analysis during charged particle parameters measuring in the experiments with a xenon bubble chamber. 1. Main error sources. Instrumental errors, 12:48250 (R;SU;In Russian)
Error analysis during charged particle parameters measuring in the experiments with a xenon bubble chamber. 2. Mathematic models for measurement errors of particle track geometrical parameters, 12:48252 (R;SU;In Russian)
Fast charge-to-digital converter, 12:48247 (R;SU;In Russian)
Fast hadron energy losses by excitation of nuclear matter, 12:48921 (R;SU;In Russian)
Form factor πrhoγ in perturbative QCD, 12:48817 (R;SU)
Is neutron pinch formed in a plasma focus by a residual plasma? , 12:49084 (R;SU;In Russian)
Lambdameter, 12:48245 (R;SU;In Russian)
Low-energy supergravity and a light t quark, 12:48813 (R;SU;In Russian)
MAKET zero power reactor, 12:47455 (R;SU;In Russian)
Method and computer code for three-dimensional calculation of a subcritical heterogeneous reactor with a source, 12:47454 (R;SU;In Russian)
Method for calculating efficient boundary condition on a cylindrical cell surface for the flux first asymuthal harmonic, 12:47431 (R;SU;In Russian)
Numerical solution of the problem on the structure of cylindric Z-pinch with consideration of the terms connected with thermoforce, 12:49083 (R;SU;In Russian)
On possibility of detection of double beta decay by liquid ionization chambers, 12:48248 (R;SU;In Russian)
On two-photon width of σ-meson, 12:48816 (R;SU)
Production of cumulative protons with 0.6-1.83 GeV/c momenta, 12:48764 (R;SU;In Russian)
Production of deuterons and tritium nuclei with the 0.6-1.83 GeV/c momenta on Be, Al, Cu, Ta nuclei at the 119 deg angle by 10 GeV protons, 12:48872 (R;SU;In Russian)
Program for spectra unfolding using a mini computer, 12:48249 (R;SU;In Russian)
Proton beam current measurement in the U-10 ionguide, 12:48207 (R;SU;In Russian)
Search for the charm particles in neutrino experiment with nuclear photoemulsion placed inside the Fermilab 15-foot bubble chamber, 12:48763 (R;SU;In Russian)
Search for the exotic baryon resonances with isospin I=5/2 in the π/sup +/p -> pπ/sup +/π/sup +/π/sup -/ reaction at π/sup +/ meson momentum of 3.94 GeV/c, 12:48765 (R;SU;In Russian)
Self-energy operator of the d-s transition and the K/sub s/ -> 2π decays, 12:48818 (R;SU)
Specific features for designing circuits for preliminary processing signals from the PSP-2 flying spot digitizer, 12:48256 (R;SU;In Russian)
Streamer counter, 12:48244 (R;SU;In Russian)
Study on the baryon exchange π/sup +/ + p -> Δ/sup ++/ + rho/sup 0/ reaction at 3.94 GeV/c, 12:48762 (R;SU;In Russian)
Subroutine package for histogram selective filling, 12:49183 (R;SU;In Russian)
Technique for processing multivertex events with neutral strange particles detected in the ZhVK-205 liquid hydrogen chamber, 12:48255 (R;SU;In Russian)
Technique for track search for events recorded in the ITEP 6-meter spectrometer (MIS), 12:48254 (R;SU;In Russian)
Transparency, stopping power and thermalization of nuclear matter in the Ca+Ca and Nb+Nb reactions at E/A=400 MeV: classical equation of motion approach, 12:48923 (R;SU)
Unit of programmed delay, 12:48282 (R;SU;In Russian)
What can we know about nature of the resonance σ(980) from the data on σ production in γγ collisions, 12:48819 (R;SU)
Wide-aperture installation for study on multiparticle reactions, 12:48253 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.

Computerized system for studies on creep of irradiated materials in the BR-10 reactor. Control system for electric motor, 12:47444 (R;SU;In Russian)
Heat transfer in laminar flow for mass inlet into an annular channel, 12:48127 (R;SU;In Russian)
MMKENG code set to calculate radiation energy release in reactor cores and shields, 12:47430 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij

Calculation of the corrugated vacuum chamber longitudinal impedance, 12:48202 (R;SU;In Russian)
Charged current antineutrino-induced coherent negative pion production off neon, 12:48760 (R;SU)
Charge-sensitive amplifier, 12:48233 (R;SU;In Russian)
Comparison of hadron multiplicities in gluon and quark jets, 12:48790 (R;SU)
Description of the total cross sections rise in the gluon dominance model, 12:48782 (R;SU)
Diagnostic apparatus for scraper system of 70 GeV proton synchrotron, 12:48203 (R;SU;In Russian)
Effective way of reconstructing structure functions on their moments, 12:48789 (R;SU;In Russian)
Gluonic structure and strong interactions of hadrons at high energies, 12:48786 (R;SU)
Higher mode oscillation damping system in the UNK accelerating unit, 12:48225 (R;SU;In Russian)
Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers, 12:48755 (R;SU;In Russian)
Inclusive production of rho/sup 0/ and K/sup *0/ mesons in the ν-bar/sub μ/N charged-current interactions, 12:48758 (R;SU;In Russian)
Inclusive spectra in hard processes, 12:48781 (R;SU)
Influence of heat release on superconducting dipole performance during UNK duty cycle, 12:48226 (R;SU;In Russian)
Infrared asymptotics of gluonic Green functions in covariant gauge, 12:48791 (R;SU;In Russian)
Inverse scattering method and one-zone approximation in relativistic string theory, 12:48788 (R;SU)
Longitudinal stability of a drift bunch, 12:48185 (R;SU;In Russian)
Measuring characteristics of longitudinal high-frequency beam instability in the IHEP proton synchrotron, 12:48184 (R;SU;In Russian)

Meson mass spectrum in generalized quark field model, 12:48792 (R;SU)
Methodical aspects of Bonner multisphere spectrometer application in radiation researches at the IHEP accelerator, 12:48236 (R;SU;In Russian)
Model for dynamical chiral symmetry breaking and quark condensate, 12:48787 (R;SU)
Neutral and charged D/sup */ meson production in pi /sup -/p interactions at 360 Gev/c, 12:48756 (R;SU;In Russian)
Neutral strange particle production in neutrino interactions of charged current at energy of 3-30 GeV, 12:48757 (R;SU;In Russian)
New notions about space-time and gravitation, 12:49032 (R;SU;In Russian)
Observation of a narrow meson with a mass of 1750 MeV decaying into etaeta pair, 12:48753 (R;SU;In Russian)
On account for contribution from anomalous Zγll interaction in e/sup +/e/sup -/ -> νν-bary process, 12:48793 (R;SU)
Optimization of axial-symmetric multilens focusing system for wide-spectra neutrino beams, 12:48183 (R;SU;In Russian)
Oscillations of polarization asymmetry in the π/sup -/parrow up -> π/sup 0/n reaction in the range of tau ≦ 3(GeV/c)/sup 2/ , 12:48752 (R;SU;In Russian)
Possibility to test the excited quark hypothesis and define the quark quantum numbers, 12:48783 (R;SU)
Quantum theory of string in the four-dimensional space-time, 12:49031 (R;SU)
Radiation resistance of γ-detector modules at the labelling station of labelled neutrino complex, 12:48274 (R;SU;In Russian)
Relative yields of the eta mesons produced by 10 GeV pions and kaons, 12:48751 (R;SU;In Russian)
Sigma spectrometer for investigation of π/sup -/-meson dissociation in μ/sup +/μ/sup -/π/sup -/ system on nuclei, 12:48235 (R;SU;In Russian)
Simulating neutron, photon and charged particle trajectories in geometric-computer systems, 12:48977 (R;SU;In Russian)
Specific kerma equivalent for photons and neutrons up to 20 MeV, 12:48980 (R;SU;In Russian)
Spectral investigation of neutron radiation in three-sectional concrete labyrinth from a californium-252 source, 12:48224 (R;SU;In Russian)
String model of hadrons and their interactions, 12:48785 (R;SU)
Study on the inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons in quark jet of ν-barN interaction of charged current, 12:48759 (R;SU;In Russian)
Study on the multiple pion production in the nondiffraction exclusive K/sup -/p interactions at 32.1 Gev/c, 12:48754 (R;SU;In Russian)
System of gas Cherenkov counters for kaons identification in high intensity beams, 12:48234 (R;SU;In Russian)
Theoretical group nature of an impact parameter and elastic scattering of hadrons, 12:48784 (R;SU;In Russian)

Graham (Reuben L.), Inc., Charleston, WV (USA)
Exploration-production studies in newly drilled Devonian Shale gas wells. Annual report, February 1, 1986-January 31, 1987, 12:47167 (R;US)

Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)
Beam diagnostics at Ganil in 1986, 12:48181 (R;FR)
On line beam diagnostics at Ganil, 12:48182 (R;FR)

Massachusetts Inst. of Tech., Cambridge (USA). Space Systems Lab.
Factors for MPD (magnetoplasma dynamic) thrustors. Annual report, 15 December 1983-14 December 1984, 12:48734 (R;US)

Massachusetts Inst. of Tech., Lexington (USA). Lincoln Lab.
Diode lasers with cylindrical mirror facets and reduced beam divergence, 12:48109 (R;US)

Material Concepts, Inc., Columbus, OH (USA)
Discontinuous reinforced MMC (metal-matrix composite) by improved sonic distribution of SiC into molten aluminum. Technical report (Final), 28 June 1985-28 February 1987, 12:47883 (R;US)

Metsaeteho, Helsinki (Finland)
Model for optimising the use of wood raw material, 12:47270 (R;FI;In Finnish)

Michigan State Univ., East Lansing (USA). Dept. of Physics and Astronomy
Gluon production of gauge bosons, 12:48776 (R;US)

Michigan Technological Univ., Houghton (USA). Dept. of Physics
Theory of defects in non-metallic solids: Progress report, 1 August 1986 to 31 July 1987, 12:47894 (R;US)

Michigan Univ., Ann Arbor (USA)
US Department of Energy Nuclear Energy University program in robotics for advanced reactors: Program plan, FY 1987-1991, 12:48094 (R;US)

Michigan Univ., Ann Arbor (USA). Dept. of Chemical Engineering
Improving the stability of coal slurries: Quarterly progress report for the period June 15, 1987-September 15, 1987, 12:47100 (R;US)

Michigan Univ., Ann Arbor (USA). Dept. of Electrical Engineering and Computer Science
Finite element simulation and automated defect detection for thyristors: Final report, 12:47364 (R;US)

Michigan Univ., Ann Arbor (USA). Dept. of Materials Science and Engineering
Effects of impurities on domain growth, 12:47899 (R;US)
Monte Carlo simulation of modulated phases, 12:47824 (R;US)

Michigan Univ., Ann Arbor (USA). Div. of Nuclear Medicine
New techniques for positron emission tomography in the study of human neurological disorders for the period June 15, 1987 through December 14, 1987, 12:48465 (R;US)

Miljoekorsulterna i Studsvik AB, Nykoeping (Sweden)
Investigation concerning organic micro-pollutants from waste combustion, 12:47705 (R;SE;In Swedish)

Miljoestyrelsen, Copenhagen (Denmark). Atomberedskabet
Chernobyl accident and Denmark, 12:47477 (R;DK;In Danish)
Chernobyl accident and Denmark. Appendices. Vol. 1, 12:47478 (R;DK;In Danish)
Chernobyl accident and Denmark. Appendices. Vol. 2, 12:47479 (R;DK;In Danish)

Minerals Management Service, Anchorage, AK (USA). Alaska Outer Continental Shelf Region
Environmental impact statement. Proposed Norton Basin Sale 100. Volume 2, 12:47158 (R;US)
Final environmental impact statement. Proposed Norton Basin Sale 100. Volume 1, 12:47157 (R;US)

Mine Safety and Health Administration, Denver, CO (USA)
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)
Comparison of hearing protector rating methods and recommendations for use in the mining industry, 12:47119 (R;US)

Mine Safety and Health Administration, Denver, CO (USA). Safety and Health Technology Center
Injury experience in coal mining, 1985, 12:47120 (R;US)

Ministry of Agriculture and Forestry, Helsinki (Finland)
Finnish research project on acidification (HAPRO). Research contents 1986, 12:48331 (R;FI)

Minnesota Dept. of Natural Resources, St. Paul (USA). Div. of Minerals
Peat resource estimation in Minnesota: Final report, 12:47068 (R;US)

Minnesota Univ., Minneapolis (USA). Dept. of Mechanical Engineering
Study of the use of Y_2O_3 doped ZrO_2 membranes for solar electrothermal and solar thermal separations. Technical report, 12:47318 (R;US)

Mission Research Corp., Albuquerque, NM (USA)
Recirculating accelerator studies. Final report, 1 January 1985-31 March 1987, 12:48178 (R;US)

Mississippi-Alabama Sea Grant Consortium, Biloxi, MS (USA)
Shrimp vessel test of the GSM-Marshall automatic marine propeller, 12:47669 (R;US)

Missouri Univ., Columbia (USA). Water Resources Research Center
Assessment of acid mine drainage in the Missouri River Basin for mutagenic and clastogenic activities. Final technical completion report, 12:47057 (R;US)

Missouri Univ., Rolla (USA)
[Coal disintegration by high pressure water jet]: Technical progress report No. 12 for the period from August 15 to September 15, 1987, 12:47010 (R;US)

Monsanto Research Corp., Miamisburg, OH (USA). Mound
Application of prediction of equilibrium to servo-controlled calorimetry measurements, 12:47247 (R;US)
Mound activities in chemical and physical research: January-June 1987, 12:47991 (R;US)

Moskovskij Inzhenerno-Fizicheskij Inst. (USSR)
Methods of high-resolution holography and optical analysis of particle tracks in track detectors by the radiation of partial coherence. Partial-coherent holographic detection of tracks of a high transverse resolution, 12:48258 (R;SU;In Russian)

Mount Holyoke Coll., South Hadley, MA (USA)
Double beta decay experiment using ^{100}Mo, 12:48887 (R;US)

Muenchen Univ. (Germany, F.R.). Fachbereich Tiermedizin
Experimental investigation into the effects of irradiation with mixed neutron-gamma-rays on the immune system as

demonstrated by the model of immunity to Staphylococcal Enterotoxin B in rabbits, 12:48499 (R;DE;In German)
Experimental investigations into the effects of irradiation with neutron and gamma rays on the immune system, as demonstrated at the model of immunity of Salmonella typhimurium on the mouse, 12:48498 (R;DE;In German)
Growth of hemopoietic precursor cells (CFU-C) of adriamycin-treated or whole-body-irradiated dogs with or without bleomycin in vitro, 12:48497 (R;DE;In German)
Influence of some radioprotective and radiosensitizing compounds on the replicative and repair induced DNA synthesis of rats spleen cells in vitro, 12:48523 (R;DE;In German)

Muenchen Univ. (Germany, F.R.). Fakultaet fuer Biologie
Autoradiographic and cytochemical studies on the intracellular transport of secreted proteins in the lacrimal ducts (glandula extraorbitalis) of the rat, 12:48489 (R;DE;In German)
Diaplacental transfer of /sup 14/C ethanol in pregnant albino rats at various stages of gestation, 12:48464 (R;DE;In German)

Muenster Univ. (Germany, F.R.)
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)

Muhlenberg Coll., Allentown, PA (USA). Dept. of Physics
Relativistic nuclear fluid dynamics and VUU kinetic theory, 12:48956 (R;US)

N

Nagoya Univ. (Japan). Inst. of Plasma Physics
Concept definition of an FRC/DD-/sup 3/He advanced fusion reactor, 12:49081 (R;JP;In Japanese)
Data processing with PC-9801 micro-computer for HCN laser scattering experiments, 12:49082 (R;JP;In Japanese)
Electron density diagnostics by FE XXII line intensity ratio, 12:49078 (R;JP)
ICRF current drive experiment on JIPP T-IIU, 12:49133 (R;JP)
Lectures on topics in magnetic reconnection and transport in fusion devices, 12:49075 (R;JP)
Low power level control unit of high power amplifiers for ICRF heating experiment in JIPP T-IIU tokamak, 12:49134 (R;JP;In Japanese)
Measurements of environmental radiations and radioactivities in Toki, 4, 12:48382 (R;JP;In Japanese)
Observations of the asymmetric power spectra of the density fluctuations in JIPP T-IIU plasma by the far-infrared laser scattering, 12:49080 (R;JP)
Plasma confinement by a radio frequency plugging potential in an axisymmetric mirror-cusp device, 12:49077 (R;JP)
Sustaining a steady-state field-reversed configuration, 12:49076 (R;JP)
Volume produced H/sup -/, D/sup -/ ion source for proton accelerator and thermo-nuclear fusion research by sheet plasma, (2), 12:49079 (R;JP)

Naples Univ. (Italy)
Apparatus for thermophotovoltaic conversion, 12:47300 (R;IT;IT)

National Aeronautics and Space Administration, Cleveland, OH (USA). Lewis Research Center
Boron nitride: composition, optical properties and mechanical behavior, 12:47861 (R;US)
Computation of full-coverage film-cooled airfoil temperatures by two methods and comparison with high heat flux data, 12:48128 (R;US)
Development of an advanced photovoltaic concentrator system for space applications, 12:47310 (R;US)
Effect of component compression on the initial performance of an IPV nickel-hydrogen cell, 12:47565 (R;US)
Environmental degradation of 316 stainless steel in high temperature low cycle fatigue, 12:47830 (R;US)
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)
Issues in space photovoltaic research and technology, 12:47309 (R;US)
Monte Carlo simulation of modulated phases, 12:47824 (R;US)
NASA/USAF arcjet research and technology program, 12:47460 (R;US)
Nuclear powered Mars cargo transport mission utilizing advanced ion propulsion, 12:47459 (R;US)
Stability of bromine, iodine monochloride, copper (II) chloride, and nickel (II) chloride intercalated pitch-based graphite fibers, 12:47909 (R;US)
Test results of a 60 volt bipolar nickel-hydrogen battery, 12:47564 (R;US)
Tribological properties of coal slurries, 12:47041 (R;US)

National Aeronautics and Space Administration, Greenbelt, MD (USA). Goddard Space Flight Center
Essays in Space Science, 12:48558 (R;US)

National Aeronautics and Space Administration, Moffett Field, CA (USA). Ames Research Center
Detector arrays for low-background space infrared astronomy, 12:48286 (R;US)

National Aeronautics and Space Administration, Washington, DC (USA)
Star formation in galaxies, 12:48574 (R;US)

National Board of Waters, Helsinki (Finland)
Energy recovery of the sludge in small sewage treatment plants, 12:47264 (R;FI;In Finnish)

National Bureau of Standards, Boulder, CO (USA)
Precision metrology comparing ultrasonic and other techniques for the determination of steel thickness, 12:48141 (R;US)

National Bureau of Standards, Boulder, CO (USA). Chemical Engineering Science Div.
Basic gas metering. Annual report, April 1984-March 1985, 12:47170 (R;US)
Review of needs for thermophysical property data on solid feedstocks. 2. Oil shale, 12:47184 (R;US)

National Bureau of Standards, Boulder, CO (USA). Thermophysics Div.
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1986, 12:47177 (R;US)

National Bureau of Standards, Washington, DC (USA)
Model for the nuclear effects of the d-t-muon fusing state, 12:48875 (R;US)
Modelling and theories of alloy phase behavior, 12:47808 (R;US)
Precision metrology comparing ultrasonic and other techniques for the determination of steel thickness, 12:48141 (R;US)

National Bureau of Standards, Washington, DC (USA). Center for Electronics and Electrical Engineering
Optical power line voltage and current measurement systems: Volume 2, Assessment of future optical measurements of voltage and current in electric power systems: Final report, 12:47367 (R;US)

National Center for Atmospheric Research, Boulder, CO (USA)
Kinetics investigations of atmospheric chemical reactions. Doctoral thesis, 12:48368 (R;US)

Nationale Genossenschaft fuer die Lagerung Radioaktiver Abfaelle (NAGRA), Baden (Switzerland)
Backfilling and sealing of tunnels, shafts and boreholes. Volume 2: Appendices, 12:47226 (R;CH;In German)

National Energy Information Center, Washington, DC (USA)
Coal Distribution Data, 1980-1986 (EIA Form 6). Data file, 12:47116 (R;US)

National Geophysical Data Center, Boulder, CO (USA)
Solar-Geophysical Data Number 513, May 1987. Part 2. (comprehensive reports). Data for November 1986, and miscellanea, 12:48684 (R;US)
Solar-Geophysical Data Number 513, May 1987. Part 1 (prompt reports). Data for April, March 1987 and late data, 12:48683 (R;US)

National Inst. for Occupational Safety and Health, Cincinnati, OH (USA)
Formaldehyde-exposure characterization in garment-manufacturing plants: a composite summary of three in-depth industrial-hygiene surveys, 12:48342 (R;US)
Health-Hazard Evaluation report HETA 84-496-1766, Applied Plastics, Slocum, Rhode Island, 12:48336 (R;US)
Health-Hazard Evaluation Report HETA 85-195-1768, Dale Electronics, Incorporated, Norfolk, Nebraska, 12:48338 (R;US)
Health-Hazard Evaluation Report HETA 85-111-1770, Feed Materials Production Center, Fernald, Ohio, 12:47193 (R;US)
Health-Hazard Evaluation Report HETA 86-410-1772, HCFA-Meadows East Building, Baltimore, Maryland, 12:48345 (R;US)
Health-Hazard Evaluation Report HETA 84-180-1776, Jacksonville Fire Department, Jacksonville, Florida, 12:48351 (R;US)

Health-Hazard Evaluation Report HETA 86-328-1773, Memorial Hospital of Southern Oklahoma, Ardmore, Oklahoma, 12:48339 (R;US)
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)
Health-Hazard Evaluation Report HETA 86-070-1774, Silver Deer Spectrum, Boulder, Colorado, 12:48337 (R;US)
Health-Hazard Evaluation Report HETA 85-150-1767, Warwick Fire Department, Warwick, Rhode Island, 12:48340 (R;US)
Industry-wide studies report of an in-depth survey at Firestone Synthetic Rubber and Latex Company, Lake Charles, Louisiana, 12:48344 (R;US)
NIOSH (National Institute for Occupational Safety and Health) pocket guide to chemical hazards. Second edition, 12:48529 (R;US)
Preliminary survey report: control technology for gallium arsenide processing at Morgan Semiconductor Division, Garland, Texas, 12:48352 (R;US)
Preliminary survey report: control technology for gallium arsenide processing at Hewlett Packard, San Jose, California, 12:48353 (R;US)
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)

National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Div. of Physical Sciences and Engineering
Evaluation of a coated-filter sampling method for the determination of isocyanate concentrations in air, 12:48341 (R;US)

National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Div. of Surveillance, Hazard Evaluation and Field Studies
Development and application of algorithms for generating estimates of toxicity for the NOHS (National Occupational Hazard Survey) data base. Technical report, 12:48528 (R;US)

National Inst. for Petroleum and Energy Research, Bartlesville, OK (USA)
Carboxymethylated ethoxylated surfactants: Annual report, 12:47134 (R;US)
Geological characterization and statistical comparison of outcrop and subsurface facies: Shannon shelf sand ridges: Topical report, 12:47124 (R;US)

National Oceanic and Atmospheric Administration, Boulder, CO (USA). Space Environment Lab.
Space Environment Laboratory annual report - FY 1986, October 1, 1985 to September 30, 1986, 12:48696 (R;US)
TIROS-N/NOAA A-J space environment monitor subsystem. Technical memo, 12:48695 (R;US)

National Ocean Service, Anchorage, AK (USA). Ocean Assessments Div.
Coastal oceanography of the northeastern Gulf of Alaska. Final report, 12:47126 (R;US)
Research to determine the accumulation of organic constituents and heavy metals from petroleum-impacted sediments by marine detritivores of the Alaskan Outer Continental Shelf. Final report, 12:47155 (R;US)
Suspended particulate matter distribution, transport, and physical characteristics in the North Aleutian Shelf and St. George Basin lease areas, 12:47156 (R;US)

National Swedish Environmental Protection Board, Solna
Environmental effects of energy crops cultivation, 12:47303 (R;SE;In Swedish)
Forest liming on mineral soils. Results of Finnish experiments, 12:48422 (R;SE)
Report from the project 'Transport of persistent organical substances to, and from the atmosphere', 12:48332 (R;SE;In Sweden)

National Swedish Environmental Protection Board, Uppsala
Air pollution and vegetational damages in natural vegetation. A literature review, 12:48374 (R;SE;In Swedish)

Nauchno-Issledovatel'skij Inst. Atomnykh Reaktorov, Dimitrovgrad (USSR)
Distribution of radioactive fission products within the VK-50 NPP circuit when operating with non-failed fuel elements, 12:47407 (R;SU;In Russian)
Intermetallic compounds Pt_6An(An=Am,Cm,Bk,Cf), 12:47831 (R;SU;In Russian)
Metallic berkelium production, 12:47832 (R;SU;In Russian)
Results of the PG-2 steam generator life tests at the BOR-60 reactor. Thermal and hydrodynamic characteristics under steady and transient conditions, 12:47423 (R;SU;In Russian)

Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)
Some results of parametric analysis of plasma current disruption effects in a reactor-tokamak, 12:49136 (R;SU;In Russian)
Synthesis of electromagnet pole configurations on the base of the solution of Cauchy problem for Laplace equation, 12:48210 (R;SU;In Russian)
Transverse components of the intrinsic field of a bunch in a resonator accelerator, 12:48192 (R;SU;In Russian)

Naval Academy, Annapolis, MD
Development of a tissue-equivalent proportional-counter system for the measurement of neutron dose. Final report, 1986-1987, 12:48228 (R;US)
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)

Naval Air Development Center, Warminster, PA (USA). Air Vehicle and Crew Systems Technology Directorate
Corrosion behavior of metal-matrix composites. Final report, June 1985-June 1986, 12:47882 (R;US)

Naval Observatory, Washington, DC (USA)
Total solar eclipse of 17-18 March 1988, 12:48548 (R;US)

Naval Postgraduate School, Monterey, CA (USA)
Processing and superplasticity in lithium-containing Al-Mg alloys. Master's thesis, 12:47806 (R;US)

Naval Research Lab., Washington, DC (USA)
Free electron laser sideband instability reconsidered, 12:48110 (R;US)

Naval Research Lab., Washington, DC (USA). Optical Sciences Div.
Frequency stabilization and phase locking of laser diodes and laser arrays (FG 87). Progress report, 12:48111 (R;US)

Naval Weapons Center, China Lake, CA (USA)
Coso Monitoring Program. Summary report, October 1985-September 1986, 12:47326 (R;US)

Nebraska Univ., Lincoln (USA)
The formation of optical membrane reflector surfaces using uniform pressure loading, 12:47316 (R;US)

Nevada Univ., Reno (USA). Dept. of Chemistry
Migration and transfer of triplet energy in selected polymer systems, 12:47891 (R;US)
The influence of polymer structure on triplet luminescence, 12:47892 (R;US)

New Jersey Dept. of Transportation, Trenton (USA). Div. of Research and Demonstration
High-occupancy-vehicle treatments, impacts, and parameters (a synthesis). Volume 1. Procedures and conclusions. Final report, 12:47667 (R;US)

New Mexico Univ., Albuquerque (USA)
Double beta decay experiment using ^{100}Mo, 12:48887 (R;US)

New York Energy Ofice, Albany (USA). Div. of Policy Analysis and Planning
Energy assessment '87: An analysis of New York State's energy future, 12:47576 (R;US)
New York State energy demand forecasts '87: Technical report, 12:47577 (R;US)
Petroleum supply assessment '87: Technical report, 12:47151 (R;US)

New York State Dept. of Environmental Conservation, Albany (USA)
Turbulent diffusion behind vehicles: evaluation of roadway models, 12:48354 (R;US)

New York Univ., NY (USA). Inst. of Environmental Medicine
Design of a sampling program, 12:48319 (R;US)
Variation of workplace atmospheres, 12:48318 (R;US)

New York Univ., NY (USA). Radiation and Solid State Lab.
The photophysics and chemistry of PAH [polycyclic aromatic hydrocarbons] compounds: Research progress report, September 1, 1985 to August 31, 1987, 12:48317 (R;US)

Norges Geologiske Undersoekelse, Oslo
Determination of radioactive fallout after the Chernobyl accident, 12:47481 (R;NO;In Norwegian)
NGU's follow-up after the Chernobyl accident and their utilitarian value in future preparedness, 12:47482 (R;NO;In Norwegian)

North Carolina State Univ., Raleigh (USA)
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXVI, 1 September 1986-31 August 1987, 12:48865 (R;US)
North Carolina State Univ., Raleigh (USA). Dept. of Materials Engineering
Analytical electron microscopy characterization of boron in sintered α-SiC, 12:47856 (R;US)
North Carolina Univ., Chapel Hill (USA)
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXVI, 1 September 1986-31 August 1987, 12:48865 (R;US)
North Dakota Univ., Grand Forks (USA). Energy Research Center
ChemCoal Process Development Program: Final report, 12:47023 (R;US)
Heteroatom containing organics during liquefaction, 7/1/87-7/1/88, 12:47022 (R;US)
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
North Dakota Univ., Grand Forks (USA). North Dakota Mining and Mineral Resources Research Inst.
Characterization, extraction, and reuse of coal-gasification solid wastes. Volume 3. Technical and economic feasibility of bulk utilization and metal recovery for ashes from an integrated coal-gasification facility. Final report, April 1983-June 1986, 12:47059 (R;US)
Northrop Services, Inc., Research Triangle Park, NC (USA)
Photooxidation of allyl chloride, 12:48362 (R;US)
Northwestern Univ., Evanston, IL (USA)
[High energy experimental physics]: Progress report, 12:48749 (R;US)
Pulsed-field-gradient nuclear magnetic resonance spectrometer for direct measurement of ionic diffusion in solid electrolytes. Final report, 1 January 1985-31 December 1986, 12:48275 (R;US)
Northwestern Univ., Evanston, IL (USA). Dept. of Chemistry
Electron-transfer mechanisms in thermochemical gasification: a quantitative quantum-mechanical investigation. Annual report, January-December 1986, 12:47032 (R;US)
Nuclear Energy Agency, 75 - Paris (France)
Decommissioning of nuclear facilities. Feasibility, needs and costs, 12:47476 (R;XN)
Interim oceanographic description of the North-East-Atlantic site for the disposal of low-level radioactive waste. Vol. 2, 12:47225 (R;XN)
Nuclear Metals, Inc., Concord, MA (USA)
Atmosphere-assisted machining of depleted-uranium (DU) penetrators. Final report, 12:47205 (R;US)
Established techniques for cleaning depleted-uranium derby in lieu of nitric acid pickling. Contractor report (Final), 12:47206 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering
Development and validation of a real-time SAFT-UT [synthetic aperture focusing technique for ultrasonic testing] system for the inspection of light water reactor components: Annual report, October 1985-September 1986, 12:47408 (R;US)
Development of a testing and analysis methodology to determine the functional condition of solenoid operated valves, 12:47534 (R;US)
Prediction and mitigation of erosive-corrosive wear in secondary piping systems of nuclear power plants, 12:47438 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Low-Level Waste Management and Decommissioning
Plans and schedules for implementation of US Nuclear Regulatory Commission responsibilities under the Low-Level Radioactive Waste Policy Amendments Act of 1985 (P.L. 99-240), 12:47595 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Reactor and Plant Systems
Davis-Besse uncertainty study, 12:47533 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Safeguards
Methods for recurring loss tests, 12:47248 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Waste Management
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Automated long-term surveillance of a commercial nuclear power plant, 12:47445 (R;US)
Preparation of design specifications and design reports for pumps, valves, piping, and piping supports used in safety-related portions of nuclear power plants, 12:47437 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
Proceedings of the symposium on chemical phenomena associated with radioactivity releases during severe nuclear plant accidents, 12:47483 (R;US)
Test of 6-in.-thick pressure vessels: Series 3, Intermediate test vessel V-8A: Tearing behavior of low-upper-shelf material, 12:47436 (R;US)
Nuklear-Chemie und -Metallurgie G.m.b.H. (NUKEM), Hanau (Germany, F.R.)
Reliability data required for a seismic risk assessment, 12:47551 (BA;DE)

O

Oak Ridge Associated Universities, Inc., TN (USA)
Analytical electron microscopy characterization of boron in sintered α-SiC, 12:47856 (R;US)
Incorporating "fuzzy" data and logical relations in the design of expert systems for nuclear reactors, 12:47439 (R;US)
Octupole instability in the heavy barium region, 12:48902 (R;US)
Oak Ridge Gaseous Diffusion Plant, TN (USA)
Density of dilute solutions of HF and other impurities in UF_6, 12:47988 (R;US)
IDMS application documentation made easy, 12:49227 (R;US)
Oak Ridge National Lab., TN (USA)
A collection of test problems for ordinary differential equation solvers which have provisions for rootfinding, 12:49209 (R;US)
A compact model of oil supply disruptions, 12:47153 (R;US)
A modeling study of vacuum sorption characteristics of carbon dioxide on 4A zeolite molecular sieves, 12:47940 (R;US)
A useful by-product expert system, 12:47986 (R;US)
ADDNET Notebook: Documentation of the Acid Deposition Data Network (ADDNET) data base supporting the National Acid Precipitation Assessment Program, 12:48334 (R;US)
An empirical investigation of the use of ranks in πps sampling, 12:49171 (R;US)
An intensive short-term study of atmospheric lead deposition to a high-elevation spruce forest, 12:48315 (R;US)
Analytical electron microscopy characterization of boron in sintered α-SiC, 12:47856 (R;US)
ANSL-V: ENDF/B-V based multigroup cross-section libraries for Advanced Neutron Source (ANS) reactor studies, 12:48976 (R;US)
Automated long-term surveillance of a commercial nuclear power plant, 12:47445 (R;US)
BES [Basic Energy Sciences] welding science: Contractors summary report, 1986-1987, 12:47910 (R;US)
Bulk Shielding Facility quarterly report, April, May, and June 1987, 12:47457 (R;US)
Chemical Technology Division progress report for the period April 1, 1985 to December 31, 1986, 12:47933 (R;US)
Cold highly ionized ions: Comparison of energies of recoil ions produced by heavy ions and by synchrotron radiation x rays, 12:48713 (R;US)
Comparison of costs and benefits for dc and ac transmission, 12:47362 (R;US)
Cost estimate guidelines for advanced nuclear power technologies, 12:47421 (R;US)
Definitions as database records, 12:49150 (R;US)
Detection of vapors of flammable liquids in air by atmospheric sampling mass spectrometry/mass spectrometry: Progress report, March 31, 1987, 12:47941 (R;US)
Energetic M1 transitions as a probe of nuclear collectivity at high temperatures, 12:48890 (R;US)
Environmental regulatory update table, July 1987, 12:47583 (R;US)
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)
Fast Flux Test Facility noise data management, 12:47440 (R;US)

Feasibility of alpha particle measurement in a magnetically confined plasma by CO_2 laser Thomson scattering, 12:49090 (R;US)
Feasibility study of an infrared interferometer/polarimeter system for CIT [Compact Ignition Tokamak], 12:49057 (R;US)
Fifty years in synthetic fuels information: Have we lost a strategic national resource?, 12:47609 (R;US)
General order nodal transport methods in weighted diamond difference form, 12:49173 (R;US)
Geochemistry of shale groundwaters: Survey of available data and postulated mineralogic controls on composition, 12:48544 (R;US)
High Flux Isotope Reactor quarterly report, January through March 1987, 12:47456 (R;US)
Implementation and evaluation of several continuously imbedded methods of Sarafyan, 12:49210 (R;US)
Implementing and managing change: A guide for assessing information technology, 12:49228 (R;US)
IMPSOR: A fully vectorized FORTRAN code for three dimensional moving boundary problems with Dirichlet or Neumann boundary conditions, 12:49208 (R;US)
Incorporating "fuzzy" data and logical relations in the design of expert systems for nuclear reactors, 12:47439 (R;US)
Interim report for Critical Issue E configuration and maintenance, 12:49122 (R;US)
Iterative solution of a nonlinear system arising in phase change problems, 12:47993 (R;US)
KENO V.a validation of fuel pin experiments, 12:47198 (R;US)
Machine intelligence applications to securities production, 12:49174 (R;US)
Measures of diversity based on fuzzy multinomial distributions, 12:49172 (R;US)
Microcomputer-based vehicle routing and scheduling: An overview, 12:47666 (R;US)
Navy Mobility Fuels Forecasting system: Phase 3, Report, 12:47152 (R;US)
NDE [nondestructive evaluation] of advanced structural ceramics, 12:48135 (R;US)
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)
Needs assessment for nondestructive testing and materials characterization for improved reliability in structural ceramics for heat engines, 12:48140 (R;US)
Neutron slowing down and transport in an infinite medium: 1, Generalized age-theory and its range of validity, 12:48974 (R;US)
Neutron slowing down and transport in an infinite medium: 2, The scalar flux at large distances/small lethargies, 12:48975 (R;US)
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
Nuclear structure effects on alpha reduced widths, 12:48889 (R;US)
Nuclear Winter: The implications for civil defense, 12:48304 (R;US)
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)
Oak Ridge Research Reactor quarterly report, April, May, and June 1987, 12:47458 (R;US)
Oil imports and the foreign debt of developing African countries, 12:47597 (R;US)
PCB [polychlorinated biphenyls] annual report for Oak Ridge National Laboratory, 1986, 12:49154 (R;US)
Personal and organizational consequences of microcomputer use in the Naval Military Personnel Command, 12:49211 (R;US)
12-phase as a transmission alternative, 12:47363 (R;US)
Planning for US ion cyclotron heating research relevant to the Compact Ignition Tokamak and Alcator C-Mod, 12:49139 (R;US)
Preliminary long-range environmental management plan: Program overview and summary, 12:47582 (R;US)
Preparation of design specifications and design reports for pumps, valves, piping, and piping supports used in safety-related portions of nuclear power plants, 12:47437 (R;US)
Processing and properties of SiC/Nicalon composites, 12:47857 (R;US)
Progress in stellarator/heliotron research, 1981-1986: Executive summary, 12:49140 (R;US)
Projected Standard on neutron skyshine, 12:47199 (R;US)
Proposals for ORNL [Oak Ridge National Laboratory] support to Tiber LLNL [Lawrence Livermore National Laboratory], 12:49115 (R;US)
Radioactivities with $146 \leqq A \leqq 152$ investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Relative merits of size, field, and current on ignited tokamak performance: A comparison of "CITs" and "Super-JETs", 12:49138 (R;US)
Results from the first year of operation of the Federal Methanol Fleet at Lawrence Berkeley Laboratory, 12:47715 (R;US)
Review of diffusion barrier technology for application in SP-100 fuel pins, 12:47427 (R;US)
Review of new integral determinations of decay heat, 12:47466 (R;US)
Robotics and Intelligent Systems Program, 12:48098 (R;US)
Simulation of the SWTMS [Southwest Thermal Mass Study] test cells using the DOE-2.1A model, 12:47646 (R;US)
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
Stirling engines and irrigation pumping, 12:48166 (R;US)
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Technical and economic assessment for decommissioning the Air Force Nuclear Engineering Center, Wright-Patterson AFB, Ohio: Hazardous Waste Remedial Actions Program, 12:47467 (R;US)
Test of 6-in.-thick pressure vessels: Series 3, Intermediate test vessel V-8A: Tearing behavior of low-upper-shelf material, 12:47436 (R;US)
The effects of corona on current surges induced on conducting lines by EMP [electromagnetic pulse]: A comparison of experiment data with results of analytic corona models, 12:47368 (R;US)
The impact of information technology on research in science and engineering, 12:49224 (R;US)
The itinerant resonating-valence-bond model for superconductivity, 12:49008 (R;US)
The Roof Research Center: A National User Facility for thermal performance and durability of roofing systems: Interim users manual, 12:47647 (R;US)
US Department of Energy Nuclear Energy University program in robotics for advanced reactors: Program plan, FY 1987-1991, 12:48094 (R;US)
US-Japan Cooperative Program on neutron scattering, 12:48973 (R;US)

Oak Ridge National Lab., TN (USA). Fusion Engineering Design Center
System studies of compact ignition tokamaks, 12:49137 (R;US)

Oak Ridge Y-12 Plant, TN (USA)
Simplifying control system modeling using data scanning techniques, 12:48103 (R;US)

Office of Technology Assessment (U.S. Congress), Washington, DC
From pollution to prevention: a progress report on waste reduction. Special report, 12:47584 (R;US)

Office of the Under Secretary of Defense for Research and Engineering, Washington, DC (USA)
Chemical warfare - biological defense research obligations. Annual report, 1 October 1985-30 September 1986, 12:47798 (R;US)

Oklahoma State Univ., Stillwater (USA). Dept. of Physics
Angular distribution of W boson pairs at a heavy Z-resonance, 12:48775 (R;US)

Oklahoma Univ., Norman (USA)
A study of micellar-enhanced ultrafiltration: Final technical report, March 1, 1984-February 28, 1987, 12:48424 (R;US)

Oregon Dept. of Fish and Wildlife, Portland (USA). Habitat Conservation Div.
A wildlife habitat protection, mitigation and enhancement plan for eight federal hydroelectric facilities in the Willamette River Basin: Final report, 12:47277 (R;US)

Oregon Univ., Eugene (USA)
Reduced-mass Fock-Tani representations for $a^+ + (b^+ c^-) = (a^+ c^-) + b^+$ and first-order results for (abc)=(ppe, epe, $\mu p\mu$, $\mu d\mu$, and $\mu t\mu$). Technical report, 12:48697 (R;US)
Theory of half-collision cross sections, 12:48700 (R;US)

Osaka Univ. (Japan)
Operation in pulsed mode at RTNS-II, 12:48213 (R;US)

Oslo Univ. (Norway). Fysisk Inst.
Computer simulation of the electron decay in a neon afterglow plasma, 12:49091 (R;NO)
Decay of hot dysprosium nuclei, 12:48895 (R;NO)

Θ-dependent energy of a particle on a circle, 12:48859 (R;NO)
Electrodynamics of the polar cusp ionosphere. A case study, 12:48694 (R;NO)
Fully computerized multi-pass Fabry-Perot interferometer for Rayleigh-Brillouin scattering experiments, 12:48288 (R;NO)
Harmonic oscillator at finite temperature using path integrals, 12:49041 (R;NO)
On the s->d self energy transition —α/sub s/ G/sub F/ and the relevance for the ΔI=1/2 and ε'/ε puzzles, 12:48828 (R;NO)
Particle-vibration coupled states in /sup 161/Dy, 12:48894 (R;NO)
PC board photometer controller, 12:48263 (R;NO)
Section for nuclear physics annual report, January 1-December 31, 1986, 12:49159 (R;NO)

Otto (R.G.) and Associates, Reston, VA (USA)
Compensatory mechanisms in fish populations: An EPRI research plan: Final report, 12:48441 (R;US)

P

Pacific Northwest Lab., Richland, WA (USA)
Chemical characterization of fossil fuel combustion wastes: Final report, 12:47055 (R;US)
Columbia River Statistical Update Model, Version 4.0 (COLSTAT4): Background documentation and user's guide, 12:48442 (R;US)
Development and validation of a real-time SAFT-UT [synthetic aperture focusing technique for ultrasonic testing] system for the inspection of light water reactor components: Annual report, October 1985-September 1986, 12:47408 (R;US)
Environmental research on actinide elements, 12:48408 (R;US)
Evaluation of a twelve-hour/day shift schedule, 12:47453 (R;US)
Hanford Meteorological Station computer codes: Volume 2, The PROD computer code, 12:48312 (R;US)
Hanford Meteorological Station computer codes: Volume 3, The TANK computer code, 12:49212 (R;US)
Hanford Meteorological Station computer codes: Volume 4, The SUM computer code, 12:49213 (R;US)
Impact of proposed financial assurance requirements on nuclear materials licensees, 12:47581 (R;US)
Interim results from UO_2 fuel oxidation tests in air, 12:47201 (R;US)
Methods for recurring loss tests, 12:47248 (R;US)
PCDAS Version 2.2: Remote network control and data acquisition, 12:49214 (R;US)
Turning over new ground: An impact evaluation of an irrigated agriculture program, 12:47704 (R;US)

Padua Univ. (Italy). Dipartimento di Fisica
Enhanced diffusion processes during heavy-ion irradiation of glasses, 12:47911 (R;US)

Paducah Gaseous Diffusion Plant, KY (USA)
Application of fixed bed trapping technology for the removal of low concentration UF_6 from plant gaseous effluent streams, 12:47194 (R;US)

Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
About nucleon-nucleon potential: meson exchange currents and relativistic approach of nuclear structure, 12:48920 (R;FR;In French)
Neighbouring charge fragmentations in low energy fission, 12:48919 (R;FR)

Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
Experimental search of gluonic mesons, 12:48826 (R;FR;In French)
Observation of eta/sub c/ -> rho/sup 0/rho/sup 0/ and review of other eta/sub c/ decay modes, 12:48766 (R;FR)
Recent results on jet-physics and QCD tests by UA1 and UA2 at the CERN proton-antiproton collider, 12:48767 (R;FR)

PAR Technology Corp., McLean, VA (USA)
Artificial Intelligence/Enemy Courses of Action (AI/ENCOA) user's manual. Final report, January 1984-February 1985, 12:47797 (R;US)

Partnerships Ltd., Lawrenceville, NJ (USA)
Advanced aircraft-fuel evaluation. Phase 1. Final report, June 1986-January 1987, 12:47136 (R;US)

PEI Associates, Inc., Cincinnati, OH (USA)
Characteristics, deposition, and fate of inhaled particulate matter, 12:48530 (R;US)

Pennsylvania State Univ., University Park (USA)
Hydrogen annealing of P/sub b/ and E' defect centers in oxidized silicon wafers, 12:47886 (R;US)

Pennsylvania State Univ., University Park (USA). Dept. of Chemical Engineering
Characterization of catalysts with metal-support effects and of the species adsorbed on their surfaces: Progress report, September 1, 1986-August 30, 1987, 12:47812 (R;US)

Pennsylvania State Univ., University Park (USA). Dept. of Materials Science and Engineering
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)

Pennsylvania State Univ., University Park (USA). Materials Research Lab.
Residual and applied stress analysis of an alloy 600 row 1 U-bend: Final report, 12:47416 (R;US)

Pentek, Inc., Coraopolis, PA (USA)
Development of a testing and analysis methodology to determine the functional condition of solenoid operated valves, 12:47534 (R;US)

Performance Associates, Inc., Rocky Hill, CT (USA)
User's guide for signal validation software: Final report, 12:47443 (R;US)

Physical Sciences, Inc., Andover, MA (USA)
Colloidal-dynamics simulations of rheology and stability of concentrated-fuel slurries. Final report, 15 August 1986-15 April 1987, 12:47036 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Automation of a hydrogen probe for determination of hydrogen solubilities in coal liquids solvents, 12:47039 (R;US)

Pittsburgh Univ., PA (USA). Inst. for Computational Mathematics and Applications
Iterative solutions of sparse linear systems on systolic arrays. Technical report, 12:49164 (R;US)

Politechnika Warszawska (Poland). Inst. Fizyki
Octupole instability in the heavy barium region, 12:48902 (R;US)

Power Technologies, Inc., Schenectady, NY (USA)
12-phase as a transmission alternative, 12:47363 (R;US)

Princeton Univ., NJ (USA). Dept. of Chemical Engineering
Aerated and vibrated chute feeders for particulate materials: Quarterly technical report for the period June 1, 1987 to August 31, 1987, 12:48095 (R;US)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Application of polarized nuclei to fusion, 12:49094 (R;US)
Boxcar photography, 12:49092 (R;US)
Diagonal Pade approximations for initial value problems, 12:49097 (R;US)
Differential form of the collision integral for a relativistic plasma, 12:49102 (R;US)
Effect of deuteron temperature on iron forbidden line intensities in rf-heated tokamak plasmas, 12:49095 (R;US)
Electron heating using lower hybrid waves in the PLT tokamak, 12:49098 (R;US)
Inverse problem for incremental synchrotron radiation, 12:49099 (R;US)
MIRI: A multichannel far-infrared laser interferometer for electron density measurements on TFTR [Tokamak Fusion Test Reactor], 12:49096 (R;US)
Nonperturbative analysis of the two-level atom: Applications to multiphoton excitation, 12:48721 (R;US)
Parabolic approximation method for the mode conversion-tunneling equation, 12:49101 (R;US)
Polarized advanced fuel reactors, 12:49141 (R;US)
Rigorous upper bounds for fluid and plasma transport due to passive advection, 12:49100 (R;US)
Solitary Alfven wave envelopes and the modulational instability, 12:49093 (R;US)

The spheromak as a prototype for ultra-high-field superconducting magnets, 12:49142 (R;US)

Q

Queen's Univ., Belfast, Northern Ireland (UK). Dept. of Applied Mathematics and Theoretical Physics
Heavy ozone in the stratosphere, 12:48311 (R;GB)
Ion-dipolar molecule rate coefficients, 12:48698 (R;GB)

R

Radian Corp., Austin, TX (USA)
Characterization and disposal of coal-gasification waste products. Phase 2. Topical report, 1 May 1984-30 April 1986, 12:47060 (R;US)
Process description of the SASOL 1 coal-gasification plant. Topical report, 12:47030 (R;US)
Radievyj Inst., Leningrad (USSR)
Calculation of solids angles for the elliptical source-rectangular detector system, 12:48265 (R;SU;In Russian)
Regensburg Univ. (Germany, F.R.). Naturwissenschaftliche Fakultaet 4 - Chemie und Pharmazie
Development and method of use of a mass spectrometric isotope dilution analysis within the use of negative thermoionisation for determination of boron traces, 12:47938 (R;DE;In German)
Regional Economic Research, San Diego, CA (USA)
Models of commercial sector equipment and fuel decisions for the COMMEND code: Framework design and data development plan: Final report, 12:47605 (R;US)
Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Materials Engineering
Mechanism of mechanical fatigue of fused silica: Progress report, July 1, 1985-August 31, 1987, 12:47893 (R;US)
Research Triangle Inst., Research Triangle Park, NC (USA)
Development and demonstration of indoor radon-reduction measures for 10 homes in Clinton, New Jersey. Final report, April 1986-January 1987, 12:48384 (R;US)
ResTech Houston, Inc., TX (USA)
Development of petrophysical techniques for evaluating tight-gas sands. Annual technical report, March 1986-February 1987, 12:47175 (R;US)
Rice Univ., Houston, TX (USA). Dept. of Chemical Engineering
Measurement and interpretation of the solubility of a normal fluid in a hydrogen-bonding solvent: the methane-methanol system. Topical report, 12:47263 (R;US)
Risoe National Lab., Roskilde (Denmark)
Department of Energy technology annual progress report, 1 January-31 December 1986, 12:49160 (R;DK)
Introduction of a hypothetical ocean current power unit into the Faeroe Island energy system, 12:47276 (R;DK;In Danish)
Rochester Univ., NY (USA). Dept. of Chemistry
Direct infrared absorption of clusters in pulsed molecular beams: First progress report, May 1, 1986 to July 31, 1987, 12:48717 (R;US)
Rochester Univ., NY (USA). Lab. for Laser Energetics
A generalized EXIT, 12:49175 (R;US)
Energy cascading in the beat-wave accelerator, 12:48191 (R;US)
Enhanced Thomson scattering from laser plasmas, 12:49125 (R;US)
LLE [Laboratory for Laser Energetics] review, Volume 31: Quarterly report, April-June 1987, 12:49127 (R;US)
Near-infrared dichroism of a mesogenic transition metal complex and its solubility in nematic hosts, 12:47811 (R;US)
Stress measurements in sol-gel films, 12:48136 (R;US)
Time-resolved ablation measurements of imploding targets, 12:49124 (R;US)
Time-resolved absorption measurements on OMEGA, 12:49123 (R;US)
Time-resolved temperature and density measurements in ionizing, uniformly irradiated uv-laser-produced plasmas, 12:49126 (R;US)
X-ray emission from high-Z spherical laser plasmas: Implications for plasma dynamics, 12:49088 (R;US)
Rochester Univ., NY (USA). Nuclear Structure Research Lab.
Migration in alluvium of chlorine-36 and tritium from an underground nuclear test, 12:48404 (R;US)
Rockwell International Corp., Canoga Park, CA (USA). Energy Technology Engineering Center
Measured piping and component heat losses from a typical SFBP [Solar in Federal Buildings Program] solar system, 12:47320 (R;US)
Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant
Low-pressure eutectic bonding of depleted uranium to copper, 12:47839 (R;US)
Personal computers: A powerful tool for project management, 12:49215 (R;US)
Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1986, 12:47229 (R;US)
Rockwell International Corp., Thousand Oaks, CA (USA). Science Center
Progress toward a crystal streak camera using tungsten bronze crystals for the electrooptic material, 12:48292 (R;US)
Rondout Associates, Inc., Stone Ridge, NY (USA)
Source depths utilizing broad-band data. Final report, 11 April 1985-28 February 1987, 12:48310 (R;US)
Royal Inst. of Tech., Stockholm (Sweden). Dept. of Chemical Technology
AFC power plant. Feasibility study, 12:47627 (R;SE)

S

Saint Paul District Heating Development Co., MN (USA)
Aquifer thermal energy storage district cooling in downtown St. Paul, Minnesota: Feasibility study, 12:47709 (R;US)
Sandia National Labs., Albuquerque, NM (USA)
A linear-flow interpretation of the H-3 multiwell pumping test conducted at the Waste Isolation Pilot Plant (WIPP) site, 12:47231 (R;US)
A tutorial on Rogowski coil theory and operation, 12:48289 (R;US)
An analytical-experimental comparison of 150 and 220 grain per foot linear shaped charge performance, 12:48297 (R;US)
An evaluation of the LEC-460 solar collector, 12:47314 (R;US)
Analytic model of an imploding Z-pinch plasma colliding inelastically with a thin-shelled cylindrical target, 12:49103 (R;US)
Application of solar technology to fuel production chemical processing, and thermochemical energy transport: Status and future, 12:47315 (R;US)
Assessment of structural integrity from forced vibration testing, 12:48100 (R;US)
Calculation of creep induced volume reduction of the Weeks Island SPR [Strategic Petroleum Reserve] facility using 3-D finite element methods, 12:47164 (R;US)
Dual S/X-band RV antenna, 12:48147 (R;US)
Enhanced diffusion processes during heavy-ion irradiation of glasses, 12:47911 (R;US)
Estimating payload internal temperatures and radiator size for multimegawatt space platforms, 12:49155 (R;US)
Feasibility and incentives for the consideration of spent fuel operating histories in the criticality analysis of spent fuel shipping casks, 12:47204 (R;US)
Field desorption of intermediates in the rhodium carbonyl formation reaction, 12:47994 (R;US)
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)
Junior Jade events: An investigation of decoupling phenomenology, 12:48299 (R;US)
Mechanically stacked multijunction solar cells: An update on Sandia programs, 12:47302 (R;US)
Models for penetration of thin plates, 12:48142 (R;US)
Predicted radiation environment of the Saturn baseline diode, 12:48212 (R;US)
Pumped spoiling experimental program, 12:47338 (R;US)

Shock-induced chemical synthesis of phases similar to the high temperature superconductor oxides, 12:47862 (R;US)
Specification of a test problem for HYDROCOIN [Hydrologic Code Intercomparison] Level 3 Case 2: Sensitivity analysis for deep disposal in partially saturated, fractured tuff, 12:47230 (R;US)
Spent fuel transportation system limitations and opportunities, 12:47203 (R;US)
Stemming column phenomenology, 12:48298 (R;US)
The aerothermodynamic environment for holes in hypersonic configurations, 12:48099 (R;US)
The method of lines for time dependent free boundary problems, 12:49216 (R;US)

Sandia National Labs., Livermore, CA (USA)
Report on the joint meeting of the Division of Development and Technology Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups, 12:49121 (R;US)
Sandia Combustion Research Program: Annual report, 1986, 12:48089 (R;US)

Savannah River Ecology Lab., Aiken, SC (USA)
Environmental research on actinide elements, 12:48408 (R;US)

Savannah River Lab., Aiken, SC (USA)
Canyon solvent cleaning with activated alumina, 12:47196 (R;US)
Colorometric determination of Fe(II)/Fe(III) ratio in glass, 12:47936 (R;US)
The Savannah River Plant automated office support system network, 12:49182 (R;US)
The sensitivity index as a screening tooling in the uncertainty analysis of ground-water contaminant transport, 12:47214 (R;US)

School of Aerospace Medicine, Brooks AFB, TX (USA)
Frequency-dependent energy absorption in the body and tail of the rodent carcass exposed to radiofrequency radiation. Final report, 31 June-31 December 1985, 12:48533 (R;US)

Science Applications International Corp., Homer City, PA (USA). Homer City Office
Upgrading Upper Kittanning Seam coal quality to improve power plant performance: Coal cleaning test facility campaign report No. 6, 12:47025 (R;US)

Science Applications International Corp., La Jolla, CA (USA)
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project, 12:47622 (R;US)
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Executive Summary. Topical report, 1983-1985, 12:47625 (R;US)
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Volume 2. Topical report, 1983-1985, 12:47624 (R;US)
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Volume 1. Topical report, 1983-1985, 12:47623 (R;US)

Science Applications International Corp., San Diego, CA (USA)
Numerical simulation of internal combustion engine flows: Development and users guide for MAGIC radial-azimuthal version, 12:47714 (R;US)

Science Research Lab., Inc., Somerville, MA (USA)
New concept for scaling excimer-laser amplifiers. Technical report (Final), 1 October 1985-30 April 1987, 12:48113 (R;US)

Senter for Industriforskning, Oslo (Norway)
GASKICK - a knowledge based system for drilling supervision and gas kick detection, 12:47142 (R;NO)

Service Central de Protection contre les Rayonnements Ionisants, 78 - Le Vesinet (France)
Monthly results of measurements, October 1986, 12:48397 (R;FR;In French)

SFA Pacific, Inc., Mountain View, CA (USA)
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)

SINTEF, Trondheim (Norway)
Environmental studies connected with establishing an incinerator plant in Trondheim. 4th quarterly report 1984, 12:48443 (R;NO;In Norwegian)
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)

Society for Industrial and Applied Mathematics, Philadelphia, PA (USA)
SIAM [Society for Industrial and Applied Mathematics] conference on optimization, 18-20, 1987, 12:49180 (R;US)

Solar Energy Research Inst., Golden, CO (USA)
A quasi-physical model for converting hourly global horizontal to direct normal insolation, 12:47296 (R;US)
Direct absorption receiver (DAR) systems assessment, 12:47317 (R;US)
Effects of exposure testing on pipe insulation: FY 1986, progress report, 12:47322 (R;US)
HBCU [Historically Black Colleges and Universities] solar radiation network annual report: FY 1986, 12:47295 (R;US)
The formation of optical membrane reflector surfaces using uniform pressure loading, 12:47316 (R;US)

Solar Turbines, Inc., San Diego, CA (USA)
Field test of a ceramic heat-recovery system for an aluminum reverberatory furnace. Final report, November 1984-December 1986, 12:47703 (R;US)
NO/sub x/ reduction for small gas turbine power plants: Final report, 12:47357 (R;US)

Sonoma Technology, Inc., Santa Rosa, CA (USA)
Chemical, aerosol, and optical measurements in the plumes of three midwestern coal-fired power plants, 12:47360 (R;US)

South African Association of Physicists in Medicine and Biology, Pretoria
South African Association of Physicists in Medicine and Biology: 25. Anniversary Congress, 18-22 March 1985, Cape Town, 12:48470 (R;ZA;In Afrikaans and English)

Southwest Research Inst., San Antonio, TX (USA)
Endurance testing of a natural-gas-fueled rotary engine. Final report, March 1985-January 1987, 12:47716 (R;US)

Southwest Research Inst., San Antonio, TX (USA). Engineering and Materials Science Div.
Analysis of crack propagation and arrest in welded LNG (liquefied natural gas) storage tanks. Final report, March 1984-October 1986, 12:47180 (R;US)

SRI International, Menlo Park, CA (USA)
Analysis of middle-distillate fuels by high-resolution field-ionization mass spectrometry. Annual report (Final), 1 June 1982-November 1986, 12:47139 (R;US)
Laser probes of natural gas ignition chemistry. Final report, January 1984-December 1986, 12:47178 (R;US)

SRI International, Menlo Park, CA (USA). Artificial Intelligence Center
ONR (Office of Naval Research) research in distributed reasoning and planning. Interim report, February 1985-February 1987, 12:49167 (R;US)

Stanford Linear Accelerator Center, Menlo Park, CA (USA)
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
J/psi and Y radiative and hadronic decays, 12:48830 (R;US)
Phenomenological implications of the blown-up orbifolds, 12:48861 (R;US)
Restrictions on two Higgs doublet models and CP violation at the unification scale, 12:48860 (R;US)
Searching for 4th generation fermions at high-energy $e^+ e^-$ machines, 12:48829 (R;US)
The interdependence of parameters for TeV linear colliders, 12:48176 (R;US)
The Mark III vertex chamber, 12:48267 (R;US)
The Mark III vertex chamber and prototype test results, 12:48268 (R;US)

Stanford Univ., CA (USA)
Energy changes in transforming solids: Final report, April 1, 1982 to November 30, 1986, 12:47804 (R;US)

Stanford Univ., CA (USA). Dept. of Physics
Advanced laser-source research. Technical report (Final), 1 April 1978-31 March 1987, 12:48112 (R;US)

Stanford Univ., CA (USA). Systems Optimization Lab.
An analysis of an available set of linear programming test problems, 12:49217 (R;US)

Statens Byggeforskningsinstitut, Hoersholm (Denmark)
Windows as energy-collectors. Relationship between energy consumption area and orientation of windows in a housing estate, 12:47321 (R;DK;In Danish)

Statens Energiverk, Stockholm (Sweden)
AFC power plant. Feasibility study, 12:47627 (R;SE)
Determination of causalities between the variables by means of multivariate analysis, 12:48155 (R;SE;In Swedish)
Environmental effects of energy crops cultivation, 12:47303 (R;SE;In Swedish)

Estimation of lateral and vertical coherence for the Naesudden wind turbine, 12:47339 (R;SE)
Flue gas condensation - state-of-the-art and research necessities, 12:48375 (R;SE;In Swedish)
Fluidized bed materials. Stage 5, final report, 12:48143 (R;SE;In Swedish and English)
Fluidized bed sensor signals analysed by means of noise technique, 12:48156 (R;SE)
Gasification by means of a circulating fluidized bed for oil substitution in lime kilns - construction and operation of a pilot plant, 12:48158 (R;SE;In Swedish)
Hydroprocessing at CTH. 266028-2 Stage 2, 12:47304 (R;SE;In Swedish and English)
Influence of ammonia and hydrogen peroxide addition on NOsub(x) emissions in the flue gas channel of a 16 MW coal fired fluidised bed combustor, 12:47361 (R;SE)
Investigation concerning organic micro-pollutants from waste combustion, 12:47705 (R;SE;In Swedish)
Modelling of circulating fluidised bed combustion systems, 12:48157 (R;SE)
Modification of wind speed and IBL-heights in a coastal region, 12:47336 (R;SE)
Residues from the combustion of waste. Chemical and physical properties, 12:48406 (R;SE;In Swedish)
Some aspects of the fluid dynamic behaviour of fast fluidised beds, 12:48131 (R;SE)
Soviet energy, 12:47598 (R;SE)
Statistical analysis of gust characteristics, 12:47337 (R;SE)

Statens Geotekniska Inst., Linkoeping (Sweden)
Residues from the combustion of waste. Chemical and physical properties, 12:48406 (R;SE;In Swedish)

Statens Inst. for Straalehygiene, Oslo (Norway)
Harsaw atlas TLD reading-off equipment to CaF/sub 2/:Dy TL-dosemeters, and an annealing procedure for CaF/sub 2/:Dy TL-dosemeters, 12:48266 (R;NO;In Norwegian)
Irradiation from video display terminals, 12:48534 (R;NO;In Norwegian)
Radiation hygiene analysis of medical activities in Norway. Integral dose: A basis of X-ray examination consequence calculations, 12:48476 (R;NO;In Norwegian)
Radiation hygiene analysis of medical activities in Norway. Development of an analytical tool, 12:48987 (R;NO;In Norwegian)
Radioactive cesium in grain 1986, 12:48409 (R;NO;In Norwegian)
Radiological diagnostic examinations in Norway - 1983, 12:48986 (R;NO)

State Univ. of New York, Plattsburg (USA). Dept. of Physics
Stratospheric particles: Synchrotron x-ray fluorescence determination of trace element contents, 12:48551 (R;US)

State Univ. of New York, Stony Brook (USA). Inst. for Theoretical Physics
Supersprings, 12:48845 (R;US)

STD Research Corp., Arcadia, CA (USA)
Analytical investigation of critical MHD [magnetohydrodynamics] phenomena: Final report for the period 15 September 1980-31 August 1986, 12:47612 (R;US)

Stearns Catalytic Corp., Denver, CO (USA)
Retrofit FGD [Flue Gas Desulfurization] cost estimating guidelines: Computer user's manual, 12:47359 (R;US)

Steinkohlenbergbauverein, Essen (Germany, F.R.)
Components of an integrated control and monitoring system, 12:47081 (R;XE;In German)
Development of techniques and equipment for working through faults, 12:47086 (R;XE;In German)
External haulage drives for winning machines, 12:47084 (R;XE;In German)
Face ends - minimization of layout constraints, 12:47082 (R;XE;In German)
Improvement of roadway stability by bolting and a composite support system, 12:47072 (R;XE;In German)
Mechanization of shotfiring drivage - II, 12:47080 (R;XE;In German)
Operations diagnosis to improve plough utilization, 12:47085 (R;XE;In German)
Optimization of combined auxiliary ventilation systems through monitoring and regulating devices, 12:47074 (R;XE;In German)
Process control computer-assisted sub-centres, Part B, 12:47091 (R;XE;In German)
Raw material and technological properties of hard coal as a function of total reflectance, 12:47040 (R;XE;In German)

Stiftelsen foer Vaermeteknisk Forskning, Stockholm (Sweden)
Characterization of eleven coals and their combustion behaviour, 12:47108 (R;SE;In Swedish)
Characterization of twenty coals and their combustion behaviour, 12:47109 (R;SE;In Swedish)
Emission measurements for wet-dry flue gas cleaning, 12:47062 (R;SE;In Swedish)
Flue gas cleaning and heat recovery in refuse incineration at Avesta, 12:48164 (R;SE;In Swedish)
Maintenance planning in district heating system, 12:47712 (R;SE;In Swedish)
Recycling of rest products from SO/sb 2/-separation in low NO/sub (x)/ burners , 12:47061 (R;SE;In Swedish)
Reduction of nitrogen oxides in combustion of peat, 12:47110 (R;SE;In Swedish)
Reduction of NO/sub (x)/ through reburning, using pulverized wood or peat, 12:47063 (R;SE;In Swedish)
Study of the thermal vaporization process of Hg from coal, 12:47033 (R;SE;In Swedish)

Stockholm Univ. (Sweden). Dept. of Meteorology
Methodology for the collection and analysis of trace metals in atmospheric precipitation, 12:48329 (R;SE)
Nitrate in precipitation - a presentation of data from the European air chemistry network, 12:48330 (R;SE)

Stone and Webster Engineering Corp., Denver, CO (USA)
Developments in oil shale in 1986, 12:47187 (R;US)

Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires
Contribution to study of effects consecutive to alpha decay of uranium 238 in some uranium compounds and uranium ores, 12:48033 (R;FR;In French)

Strat Co., Salt Lake City, UT (USA)
Production of high-energy aviation fuels from advanced coal liquids. Phase 1. Final report, June 1986-February 1987, 12:47013 (R;US)

Studsvik Energiteknik AB, Nykoeping (Sweden)
Characterization of eleven coals and their combustion behaviour, 12:47108 (R;SE;In Swedish)
Characterization of twenty coals and their combustion behaviour, 12:47109 (R;SE;In Swedish)
Determination of causalities between the variables by means of multivariate analysis, 12:48155 (R;SE;In Swedish)
Fluidized bed materials. Stage 5, final report, 12:48143 (R;SE;In Swedish and English)
Fluidized bed sensor signals analysed by means of noise technique, 12:48156 (R;SE)
Modelling of circulating fluidised bed combustion systems, 12:48157 (R;SE)
Some aspects of the fluid dynamic behaviour of fast fluidised beds, 12:48131 (R;SE)

Suomen Akatemja, Helsinki (Finland)
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)

Suunnittelurengas Oy, Helsinki (Finland)
Saving of energy in supermarkets. Final report, 12:47645 (R;FI;In Finnish)

Sverdrup Technology, Inc., Cleveland, OH (USA)
Decoupled direct method for sensitivity analysis in combustion kinetics. Final report, 12:48088 (R;US)

Swedish Council for Building Research, Stockholm
Design of surface earth-heat-collector. Calculation with a computer model, 12:47633 (R;SE;In Swedish)
District heating economy based on true total costs, 12:47708 (R;SE;In Swedish)
Glazed courtyards in the renovation of existing buildings, 12:47635 (R;SE;In Swedish)
Glazed spaces. Climate and use of energy. Experiences from measuring projects, 12:47634 (R;SE;In Swedish)
Ground heat technology in group central heating plants in Soedertaelje and Straengnaes. Introduction and obstacle, 12:47632 (R;SE;In Swedish)
Group heating plants for industrial heating applications. Alternative heat production systems and potential for oil substitution, 12:47668 (R;SE;In Swedish)
Power and energy requirements in an underground workshop, 12:48162 (R;SE;In Swedish)
Stockholm project. Power and energy simulations with BRIS and DEROB computer programs, 12:47638 (R;SE;In Swedish)
Technology assessment in the energy sector. A socio-economic guide, 12:47578 (R;SE;In Swedish)

Vent insulation. Tests in climate chamber, 12:47637 (R;SE;In Swedish)
Ventilation heat exchangers - do they work in private dwellinghouses?, 12:47636 (R;SE;In Swedish)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

SMOKES
Air Pollution Monitoring
Atmospheric aerosol chemical sampling, 12:48327 (RA;US)
Chemical Composition
Atmospheric aerosol chemical sampling, 12:48327 (RA;US)
Chemical Properties
Models for aerosol rate processes in nuclear reactor source term studies, 12:47512 (RA;US)
Indoor Air Pollution
Formaldehyde-exposure characterization in garment-manufacturing plants: a composite summary of three in-depth industrial-hygiene surveys, 12:48342 (R;US)
Health-Hazard Evaluation report HETA 84-496-1766, Applied Plastics, Slocum, Rhode Island, 12:48336 (R;US)
Respiration
Characteristics, deposition, and fate of inhaled particulate matter, 12:48530 (R;US)
AFTERGLOW
Computerized Simulation
Computer simulation of the electron decay in a neon afterglow plasma, 12:49091 (R;NO)
AGRICULTURE
Energy Conservation
R and D on a fertilizer sensor and control system: Phase 1 report, 12:47672 (R;US)
Irrigation
Turning over new ground: An impact evaluation of an irrigated agriculture program, 12:47704 (R;US)
AIR FILTERS
Coatings
Evaluation of a coated-filter sampling method for the determination of isocyanate concentrations in air, 12:48341 (R;US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Compilation of air-pollutant-emission factors. Volume 2. Mobile sources (4th edition), 12:48346 (R;US)
Impact of urban and industrial emissions on mesoscale precipitation quality, 12:48363 (R;US)
Photooxidation of allyl chloride, 12:48362 (R;US)
Utility emissions software for the NAPAP (National Acid Precipitation Assessment Program) 1985 emissions inventory, 12:48359 (R;US)
Biological Effects
Air pollution and vegetational damages in natural vegetation. A literature review, 12:48374 (R;SE;In Swedish)
Characteristics, deposition, and fate of inhaled particulate matter, 12:48530 (R;US)

Carcinogens
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Chemical Reactions
Kinetics investigations of atmospheric chemical reactions. Doctoral thesis, 12:48368 (R;US)
Environmental Transport
Wind transport of scalars and pollutants, 12:48335 (R;US)
Health Hazards
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)
Dose-response-relation between croup syndrome/obstructive bronchitis and ambient air pollution in Baden-Wuerttemberg, 12:48524 (RA;DE;In German)
Isocyanates
Evaluation of a coated-filter sampling method for the determination of isocyanate concentrations in air, 12:48341 (R;US)
Mathematical Models
International Sulfur Deposition Model Evaluation (ISDME), 12:48365 (R;US)
Models and statistical methods for gaseous-emission testing of finite sources in well-mixed chambers, 12:48367 (R;US)
Protocol for applying and validating the CMB (chemical mass balance) model, 12:48348 (R;US)
Protocol for reconciling differences among receptor and dispersion models, 12:48349 (R;US)
Rocky Mountain Acid Deposition Modeling Assessment Project--goals and current status, 12:48366 (R;US)
Turbulent diffusion behind vehicles: evaluation of roadway models, 12:48354 (R;US)
Mutagens
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Particulates
PM10 SIP (State Implementation Plan) development guideline, 12:48399 (R;US)
Research Programs
Indoor radon, 12:48383 (RA;US)
Sampling
Interpretation of work area and environmental sampling, 12:48370 (RA;US)
Simulation
Turbulent diffusion behind vehicles: experimentally determined turbulence mixing parameters, 12:48355 (R;US)

AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Pilot Plants
Removal of nitrogen oxides from flue gases, 12:48323 (R;FI;In Finnish)

AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Planning
Preliminary long-range environmental management plan: Program overview and summary, 12:47582 (R;US)
Research Programs
Ventilation and indoor air quality control, 12:48326 (RA;US)

AIR POLLUTION MONITORING
Atmospheric nitrogen oxides: their detection and chemistry. Second-year report, August 1, 1984-August 31, 1985, 12:48369 (R;US)
Chemical, aerosol, and optical measurements in the plumes of three midwestern coal-fired power plants, 12:47360 (R;US)
Surveys
Workplace air monitoring and sampling practices at DOE facilities, 12:48371 (RA;US)

AIR POLLUTION MONITORS
Design
Development of an HCl laser system to measure plume HCl concentrations, 12:48314 (R;GB)
Development of a room air monitor system and workplace transuranic aerosol measurement system, 12:48391 (RA;US)
Hydrogen chloride measurements in launch-vehicle exhaust clouds, 12:48291 (R;US)
Methods and instrumentation for monitoring airborne radioactivity, 12:48394 (RA;US)
Evaluation
Aerosol deposition and losses in 2 alpha air monitors, 12:48393 (RA;US)
Field Tests
Performance audit procedures for opacity monitors, 12:48356 (R;US)
Performance
Methodology for the collection and analysis of trace metals in atmospheric precipitation, 12:48329 (R;SE)
Performance audit procedures for opacity monitors, 12:48356 (R;US)
Performance Testing
Performance testing of workplace air monitors using procedures based on draft ANSI N42.17B, 12:48386 (RA;US)
Testing
Hydrogen chloride measurements in launch-vehicle exhaust clouds, 12:48291 (R;US)

AIR QUALITY
Information Systems
Compilation and analysis of air quality data in support of acid deposition research: Progress report, 12:48313 (R;US)
Standards
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)
PM10 SIP (State Implementation Plan) development guideline, 12:48399 (R;US)
Supplement to management of air quality. Volume VIII, 12:48400 (B;US)

AIR SAMPLERS
Detection of vapors of flammable liquids in air by atmospheric sampling mass spectrometry/mass spectrometry: Progress report, March 31, 1987, 12:47941 (R;US)
Comparative Evaluations
Evaluation of personal air sampling pumps, 12:48389 (RA;US)
Design
Virtual impactor for personal and area air sampling, 12:48373 (RA;US)
Efficiency
Particle transport efficiency of sampling lines: theory and practical experience with sample-line losses, 12:48372 (RA;US)
Virtual impactor for personal and area air sampling, 12:48373 (RA;US)

AIR SOURCE HEAT PUMPS
Binary Mixtures
Binary mixtures in exhaust-air heat pump, 12:47657 (R;FI;In Finnish)
Cost
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Energy Consumption
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Heat Recovery
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Operation
Binary mixtures in exhaust-air heat pump, 12:47657 (R;FI;In Finnish)

AIRBORNE PARTICLES

AIRCRAFT
Fuel Systems
Antimisting fuel (AMK) flight degrader development and aircraft-fuel-system investigation. Final report, March 1983-December 1985, 12:47141 (R;US)

AIRCRAFT ACCIDENTS
See ACCIDENTS

AIRCRAFT FUELS
See AVIATION FUELS

AIRFOILS
Film Cooling
Computation of full-coverage film-cooled airfoil temperatures by two methods and comparison with high heat flux data, 12:48128 (R;US)
Performance Testing
Pumped spoiling experimental program, 12:47338 (R;US)
ALAP
See RADIATION PROTECTION
ALARM DOSEMETERS
See RADIATION MONITORS
ALASKA
Ambient Temperature
Effect of the El Chichon volcanic cloud on the surface radiative regime in central Alaska, 12:48543 (J;US)
Continental Shelf
Environmental impact statement. Proposed Norton Basin Sale 100. Volume 2, 12:47158 (R;US)
Final environmental impact statement. Proposed Norton Basin Sale 100. Volume 1, 12:47157 (R;US)
Research to determine the accumulation of organic constituents and heavy metals from petroleum-impacted sediments by marine detritivores of the Alaskan Outer Continental Shelf. Final report, 12:47155 (R;US)
Suspended particulate matter distribution, transport, and physical characteristics in the North Aleutian Shelf and St. George Basin lease areas, 12:47156 (R;US)
ALBUMEN
See ALBUMINS
ALBUMINS
Radiolysis
Investigations into the oxygen effect during the radiolysis of serum albumin with the help of SDS-polyacrylamide gel electrophoresis, 12:48029 (R;DE;In German)
ALCOHOLS

APARTMENT BUILDINGS
Electric Heating
Apartment-specific energy measuring and invoicing system in a multi-storey building with electric heating, 12:47639 (R;FI;In Finnish)
Electric Measuring Instruments
Apartment-specific energy measuring and invoicing system in a multi-storey building with electric heating, 12:47639 (R;FI;In Finnish)
Energy Consumption
Apartment-specific energy measuring and invoicing system in a multi-storey building with electric heating, 12:47639 (R;FI;In Finnish)
Fuel Cell Power Plants
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Volume 1. Topical report, 1983-1985, 12:47623 (R;US)
Ground Source Heat Pumps
Ground coupled heat pump with a multiple well system as heat source for heating of apartment buildings, 12:47655 (R;SE)
Space Heating
Ground coupled heat pump with a multiple well system as heat source for heating of apartment buildings, 12:47655 (R;SE)
APPENDIX (VERMIFORM)
See LYMPHATIC SYSTEM
APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES
AQUATIC ECOSYSTEMS
Biological Accumulation
Solubility of mixtures and its application to toxicity, 12:48436 (BA;US)
Water Pollution
Cadmium speciation in aquatic-life flow-through bioassay diluters, 12:48430 (R;US)
AQUEOUS SOLUTIONS
Chemistry
Theoretical studies of electron and proton transfer processes in fluids: Progress report, August 1986 to September 1987, 12:47948 (R;US)
AQUIFERS
Chemical Oxygen Demand
Assessment of oxygen depletion by inorganic constituents at the Pittsfield, Illinois compressed air energy storage site, 12:47559 (RA;US)
Evaluation of microbiological depletion of oxygen in the Pittsfield, Illinois CAES site, 12:47560 (RA;US)
Field Tests
Field test of compressed air energy storage within an aquifer at Pittsfield, Illinois, 12:47558 (RA;US)
Geology
CAES development in aquifer porous media, 12:47554 (RA;US)
Field test of compressed air energy storage within an aquifer at Pittsfield, Illinois, 12:47558 (RA;US)
Water Pollution
Gaseous behavior of tce (trichloroethylene) overlying a contaminated aquifer, 12:48405 (R;US)
Superfund Record of Decision (EPA Region 6): Odessa Chromium 1, Odessa, Texas, September 1986. Final report, 12:48446 (R;US)
ARC WELDING
Fluid Flow
The modelling of transport phenomena in weldpools, 12:47838 (RA;US)
Heat Flow
The modelling of transport phenomena in weldpools, 12:47838 (RA;US)
ARGININE
Chemical Reactions
Interaction between copper(II)-arginine complexes and HO_2/O_2^- radicals, a pulse radiolysis study, 12:48015 (J;US)
ARGON
Crystal Structure
New materials at high pressure, 12:47964 (RA;US)
Noble gas atoms as impurities in silicon, 12:47896 (RA;US)
Electronic Structure
Charge deformation maps, molecular moments, and high-energy electron scattering, 12:47978 (RA;US)
Direct calculation of excitation energies by the coupled-cluster method: Mg and Ar atoms, 12:47967 (RA;US)
New materials at high pressure, 12:47964 (RA;US)
Noble gas atoms as impurities in silicon, 12:47896 (RA;US)
Nonlocal correlation function G(1,2) in density functional theory, 12:47958 (RA;US)
Phase Studies
New materials at high pressure, 12:47964 (RA;US)
Photoionization
Soft x-ray absorption cross section of argon determined by a variable absorber technique, 12:48733 (J;US)
ARGON 40
Isotope Separation
INS gas-filled recoil isotope separator, 12:47249 (R;JP)
ARGON 40 TARGET
Heavy Ion Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
Lanthanum 139 Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
ARGONNE NATIONAL LABORATORY
See ANL
ARGONNE SUPERCONDUCTING LINAC
See ATLAS SUPERCONDUCTING LINAC
ARMS CONTROL
Verification
On-site inspection for verification of a Comprehensive Test Ban Treaty, 12:47802 (R;US)
ARMY PERSONNEL
See MILITARY PERSONNEL
AROMATIC COMPOUNDS
See AROMATICS
AROMATICS
See also BENZENE

BIPHENYL
CONDENSED AROMATICS
PHENOLS
POLYCYCLIC AROMATIC HYDROCARBONS

Electron Transfer
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)

Excited States
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)

Labelling
Synthesis of [nucleus-/sup 14/C]-labelled aromatic compounds. 3. Preparation of nucleus-labelled carboxylic acids and chloro phenols by Sandmeyer's reaction, 12:48061 (RA;DD;In German)
Tritium-labelling of 1,8-dihydroxy-9-anthrone by catalytic exchange, 12:48063 (RA;DD;In German)

Solvation
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)

ARRAY PROCESSORS
Iterative solutions of sparse linear systems on systolic arrays. Technical report, 12:49164 (R;US)
Systolic algorithms for the parallel solution of dense symmetric positive-definite Toeplitz systems. Research report, 12:49166 (R;US)

ARSENIC

Dusts
Preliminary survey report: control technology for gallium arsenide processing at Hewlett Packard, San Jose, California, 12:48353 (R;US)

ARSENIC 68

Isotope Separation
INS gas-filled recoil isotope separator, 12:47249 (R;JP)

ARSENIC COMPOUNDS

Dielectric Properties
Dielectric response to a donor ion in a Ga/sub 1-x/Al/sub x/As - GaAs - Ga/sub 1-x/Al/sub x/As quantum well of finite depth, 12:47962 (RA;US)

ARSONIUM COMPOUNDS
See ARSENIC COMPOUNDS

ARTERIOSCLEROSIS

Pathogenesis
Effect of thromobocytopenia on atherosclerosis in rabbits with dietary hypercholesterolemia, 12:48487 (RA;US)

ARTIFICIAL INTELLIGENCE
Artificial Intelligence/Enemy Courses of Action (AI/ENCOA) user's manual. Final report, January 1984-February 1985, 12:47797 (R;US)

Distributed Data Processing
ONR (Office of Naval Research) research in distributed reasoning and planning. Interim report, February 1985-February 1987, 12:49167 (R;US)

Knowledge Base
Algebraic versus probabilistic independence in decision theory, 12:49206 (RA;US)
Linguistic similarity relations, 12:49207 (RA;US)
Proof synthesizer based on the theory of constructions, 12:49194 (RA;US)
Provision of induction as a problem solving method in data model systems, 12:49200 (RA;US)

Learning
Representational issues in machine learning, 12:49192 (RA;US)

Mathematical Logic
Non-monotonic derivations which preserve pragmatic truth, 12:49199 (RA;US)

Uses
Rewriting system with explanations, 12:49193 (RA;US)

ASBESTOS

Air Pollution
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)

Risk Assessment
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)

Victims Compensation
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)

Workmens Compensation
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)

ASCORBIC ACID

Polarography
Polarographic method for determining the contents of ascorbic acid and tin(II) chloride in the /sup 99m/Tc-MDP kit (MDP = methylene diphosphonate), 12:48068 (RA;DD;In German)

ASHES
See also FLY ASH

Radiation Absorption Analysis
Investigation of the absorption and scattering behaviour of gamma radiation in fine grained hard coal and coal slurry due to the photo effect and Compton effect with regard to determining the ash and solid contents, 12:48237 (R;DE;In German)

Radiation Scattering Analysis
Investigation of the absorption and scattering behaviour of gamma radiation in fine grained hard coal and coal slurry due to the photo effect and Compton effect with regard to determining the ash and solid contents, 12:48237 (R;DE;In German)

Waste Product Utilization
Recycling of rest products from SO/sb 2/-separation in low NO/sub (x)/ burners , 12:47061 (R;SE;In Swedish)

ASPHALTENES

Hydrogenation
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)

ASTRONOMY
See also GAMMA ASTRONOMY

Infrared Spectrometers
Detector arrays for low-background space infrared astronomy, 12:48286 (R;US)
Infrared astronomy, 12:48573 (RA;US)

Meetings
Essays in Space Science, 12:48558 (R;US)

X-Ray Spectroscopy
X-ray astronomical spectroscopy, 12:48572 (RA;US)

ASTROPHYSICS
Experimental and theoretical physics. Collection, 12:48910 (R;SU;In Russian)

ATHEROSCLEROSIS
See ARTERIOSCLEROSIS

ATLAS SUPERCONDUCTING LINAC
Argonne Tandem/Linac Accelerator.

Accelerator Facilities
The ATLAS [Argonne Tandem-Linac Accelerator System] accelerator facility, 12:48169 (RA;US)

Beam Injection
The ATLAS [Argonne Tandem-Linac Accelerator System] accelerator facility, 12:48169 (RA;US)

Design
The ATLAS [Argonne Tandem-Linac Accelerator System] accelerator facility, 12:48169 (RA;US)

Experiment Planning
Atomic physics at ATLAS [Argonne Tandem-Linac Accelerator System], 12:48712 (RA;US)

Ion Beam Injection
Uranium upgrade of ATLAS [Argonne Tandem-Linac Accelerator System], 12:48198 (RA;US)

ATMOSPHERES
Not for EARTH ATMOSPHERE.
See also SOLAR ATMOSPHERE

Chemical Reaction Kinetics
Rates of chemical heating and atmospheric heating during core debris expulsion from a pressurized vessel, 12:47530 (RA;US)

ATMOSPHERIC CHEMISTRY
Chemical Reaction Kinetics
Investigation of the degradation rate of selected reference chemicals in the troposphere. Final report, 12:48333 (R;DE;In German)
ATMOSPHERIC EXPOSURE CHAMBERS
See EXPOSURE CHAMBERS
ATMOSPHERIC PRECIPITATIONS
See also RAIN
Monitoring
Nitrogen oxides and related compounds in North Europe. Atmospheric processes, deposition, monitoring and trends, 12:48322 (R;SE)
Pollutants
Methodology for the collection and analysis of trace metals in atmospheric precipitation, 12:48329 (R;SE)
Quantitative Chemical Analysis
Methodology for the collection and analysis of trace metals in atmospheric precipitation, 12:48329 (R;SE)
ATOMIC ABSORPTION SPECTROSCOPY
See ABSORPTION SPECTROSCOPY
ATOMIC BOMBS
See NUCLEAR WEAPONS
ATOMIC CLOUDS

ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS
ATOMIC MODELS
Graphs
Chemical graph-theoretic cluster expansions, 12:49022 (RA;US)
Hamiltonians
Momentum space approach to the relativistic atomic structure calculations, 12:49018 (RA;US)
Quantum Electrodynamics
Momentum space approach to the relativistic atomic structure calculations, 12:49018 (RA;US)
ATOMIC PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Accelerator Facilities
The J.R. MacDonald Laboratory upgrade: "Ion-collision physics facility: CRYEBIS + LINAC": Status report, January 1987, 12:48167 (RA;US)
Meetings
Proceedings of the workshop on opportunities for atomic physics using slow, highly-charged ions, 12:48701 (R;US)
Research Programs
Annual report of the Tandem Accelerator Center, University of Tsukuba, April 1, 1985-March 31, 1986, 12:49162 (R;JP)
Physics Division annual review, 1 April 1986-31 March 1987 (ATLAS facility), 12:48900 (R;US)
Proceedings of the workshop on opportunities for atomic physics using slow, highly-charged ions, 12:48701 (R;US)
ATOMIC RADII
Screening
Relativistic screened orbital radii, 12:49001 (J;US)
ATOMIC WEAPONS
See NUCLEAR WEAPONS
ATOM-MOLECULE COLLISIONS
Cross Sections
Collisional time-correlation functions for molecular interactions, 12:49030 (RA;US)
ATOMS
See also HADRONIC ATOMS
Metastable States
Theory of half-collision cross sections, 12:48700 (R;US)
ATP
Labelling
HPLC of radiolabelled compounds in extreme low concentration ranges, 12:48073 (RA;DD;In German)
ATRIA
Design
Atriums in office buildings, 12:47643 (R;FI;In Finnish)
Energy Demand
Atriums in office buildings, 12:47643 (R;FI;In Finnish)
Ventilation
Atriums in office buildings, 12:47643 (R;FI;In Finnish)
AUDITORY ORGANS
Response Modifying Factors
Comparison of hearing protector rating methods and recommendations for use in the mining industry, 12:47119 (R;US)
AURORAE
Electrodynamics
Electrodynamics of the polar cusp ionosphere. A case study, 12:48694 (R;NO)
Latitude Effect
Latitudinal motions of the aurora during substorm, 12:48537 (R;US)
Particle Kinematics
Auroral particles, 12:48693 (RA;US)
AUSTRALIA
Agriculture
Energy conservation and the provision of optimum-temperature conditions for intensive livestock. Technical report series, 12:47702 (R;AU)
AUTOMATION
Implementing and managing change: A guide for assessing information technology (Office automation), 12:49228 (R;US)
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES EFFICIENCY
AUTOMOBILE INDUSTRY
See AUTOMOTIVE INDUSTRY
AUTOMOBILES
Air Pollution
Turbulent diffusion behind vehicles: experimentally determined turbulence mixing parameters, 12:48355 (R;US)
Methanol Fuels
Results from the first year of operation of the Federal Methanol Fleet at Lawrence Berkeley Laboratory, 12:47715 (R;US)
Pollutants
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Recycling
Investigation of the energy value of automobile shredder residue, 12:47673 (R;US)
Waste Product Utilization
Investigation of the energy value of automobile shredder residue, 12:47673 (R;US)
AUTOMOTIVE FUELS
Fuel Substitution
Overview of DOE Alternative Fuels Utilization Program, 12:47265 (BA;US)
AUTOMOTIVE INDUSTRY
Maintenance
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)
AVIATION FUELS
Chemical Feedstocks
Advanced aircraft-fuel evaluation. Phase 1. Final report, June 1986-January 1987, 12:47136 (R;US)
Cycloalkanes
Evaluation of naphthene-rich turbine fuels as heat sinks for hypersonic aircraft. Final report, July-December 1986, 12:47137 (R;US)
Fire Hazards
Laboratory characterization tests for antimisting fuel. Final report, 12:47138 (R;US)
Fuel Additives
Antimisting fuel (AMK) flight degrader development and aircraft-fuel-system investigation. Final report, March 1983-December 1985, 12:47141 (R;US)
Laboratory characterization tests for antimisting fuel. Final report, 12:47138 (R;US)

Production
Evaluation of naphthene-rich turbine fuels as heat sinks for hypersonic aircraft. Final report, July-December 1986, 12:47137 (R;US)
Refining
Production of high-energy aviation fuels from advanced coal liquids. Phase 1. Final report, June 1986-February 1987, 12:47013 (R;US)

B

B MESONS
Weak Hadronic Decay
B decays without final-state charm particles and CP noninvariance, 12:48831 (J;US)
BACTERIA
See also ESCHERICHIA COLI
STAPHYLOCOCCUS
STREPTOMYCES
Chemical Reactions
Biogeochemical studies of crude oil stored in the United States' strategic petroleum reserve, 12:47166 (BA;US)
BAG MODEL
Born-Oppenheimer Approximation
Better potential for quarks, 12:48836 (J;US)
BANKS
See COMMERCIAL BUILDINGS
BARC
Research Programs
Bhabha Atomic Research Centre (BARC) annual report 1985-1986, 12:49158 (R;IN)
BARIUM COMPOUNDS
See also BARIUM OXIDES
Crystal-Phase Transformations
Disproportional phase in barium-sodium niobate crystals, 12:48994 (RA;SU;In Russian)
BARIUM ISOTOPES
Deformed Nuclei
Octupole instability in the heavy barium region, 12:48902 (R;US)
High Spin States
Octupole instability in the heavy barium region, 12:48902 (R;US)
BARIUM OXIDES
Crystal Structure
Stability analysis of special-point ordering in the basal plane of YBa_2Cu_3O/sub 7-//sub δ/, 12:47865 (J;US)
Structural and superconducting properties of orthorhombic and tetragonal YBa_2Cu_3O/sub 7-//sub x/: The effect of oxygen stoichiometry and ordering on superconductivity, 12:47866 (J;US)
Structure-property relationships for RBa_2Cu_3/O/sub x/ phases (R = Y, La, Nd, Er), 12:47855 (R;US)
Energy Gap
Photoemission search for the superconducting energy gap of high-T/sub c/$YBa_2Cu_3O_7$, 12:47869 (J;US)
Fabrication
Shock-induced chemical synthesis of phases similar to the high temperature superconductor oxides ((La-Sr-Cu-O) and (Y-Ba-Cu-O)), 12:47862 (R;US)
Hydrogenation
Superconductivity in H/sub x/$YBa_2Cu_3O_7$, 12:47871 (J;US)
Photoemission
Photoemission search for the superconducting energy gap of high-T/sub c/$YBa_2Cu_3O_7$, 12:47869 (J;US)
Specific Heat
Specific heat of the high T/sub c/ superconductors $(La,M)_2CuO_4$ and $YBa_2Cu_3O_7$ in magnetic fields, 12:47859 (R;US)
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Superconductivity
Structural and superconducting properties of orthorhombic and tetragonal YBa_2Cu_3O/sub 7-//sub x/: The effect of oxygen stoichiometry and ordering on superconductivity, 12:47866 (J;US)
Thermal Expansion
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Transition Temperature
Superconductivity in H/sub x/$YBa_2Cu_3O_7$, 12:47871 (J;US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BARYON RESONANCES
*See also D*RESONANCES*
DIBARYON RESONANCES
*N*RESONANCES*
Particle Production
Exotic baryon resonances. Modern status. Possibilities to search and investigate, 12:48750 (R;SU)
BASALT
Geophysical Surveys
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
Site Characterization
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERY CHARGERS
Performance
Battery charges since EVS-5, 1978, 12:47740 (RA;US)
Performance Testing
EV battery charger testing in the EPRI/TVA program, 12:47728 (RA;US)
BEAM BUNCHERS
Beam Dynamics
Scheme to funnel ion beams with a radio-frequency quadrupole, 12:48221 (J;US)
BEAM BUNCHING
Computerized Simulation
Funneling: An intial beam-dynamics study, 12:48219 (J;US)
BEAM CURRENTS
On-Line Measurement Systems
Proton beam current measurement in the U-10 ionguide, 12:48207 (R;SU;In Russian)
BEAM DYNAMICS
See also BEAM BUNCHING
Relativistic beam energy variation under beam passage through inhomogeneous linearly polarized electromagnetic wave, 12:48188 (RA;SU;In Russian)
BEAM MONITORING
On-Line Systems
On line beam diagnostics at Ganil, 12:48182 (R;FR)
BEAM MONITORS
Diagnostic apparatus for scraper system of 70 GeV proton synchrotron, 12:48203 (R;SU;In Russian)
BEAM TRANSPORT
Computerized Simulation
High-current simulation codes, 12:48195 (J;US)
BEAM-PLASMA SYSTEMS
Electric Currents
Measurement of plasma current induced by relativistic electron beam, 12:49068 (RA;SU;In Russian)
Laser-Produced Plasma
On the interaction of electron beam with magnetic fields in a laser plasma, 12:49073 (RA;SU;In Russian)
Pierce Instability
Dynamics of Pierce instability of hot electron beams, 12:49074 (RA;SU;In Russian)
Relaxation
Self-oscillation regime of directional velocity relaxation of electron flux, 12:49069 (RA;SU;In Russian)
BEAMS (STRUCTURAL)
See STRUCTURAL BEAMS
BEAT WAVE ACCELERATORS
Energy Cascade
Energy cascading in the beat-wave accelerator, 12:48191 (R;US)

BEAUFORT SEA
Continental Shelf
Beaufort Sea petroleum technology assessment. Social and economic studies program technical report number 112. Final report, 12:47160 (R;US)
Monitoring oil-exploration activities in the Beaufort Sea. Social and economic studies program technical report Number 107. Final report, 12:47127 (R;US)
BENZENE
Chemical Preparation
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
Multi-Photon Processes
Multiphoton ionization studies of benzene in tetramethylsilane and n-pentane solutions, 12:48725 (J;US)
Photoionization
Multiphoton ionization studies of benzene in tetramethylsilane and n-pentane solutions, 12:48725 (J;US)
BENZOPYRENE
Biological Localization
Flow cytometric measurement of the metabolism of benzo [a] pyrene by mouse liver cells in culture, 12:48520 (BA;US)
Fluorescence Spectroscopy
Flow cytometric measurement of the metabolism of benzo [a] pyrene by mouse liver cells in culture, 12:48520 (BA;US)
Metabolism
Flow cytometric measurement of the metabolism of benzo [a] pyrene by mouse liver cells in culture, 12:48520 (BA;US)
Metabolism of nasally instilled benzo(a)pyrene and dihydrosafrole in dogs and monkeys, 12:48531 (J;US)
BENZOYLAMINOACETIC ACID
See HIPPURIC ACID
BENZOYLGLYCINE
See HIPPURIC ACID
BENZOYLGLYCOCOLL

BETA DETECTION
Liquid Ionization Chambers
On possibility of detection of double beta decay by liquid ionization chambers, 12:48248 (R;SU;In Russian)
BETA SPECTROSCOPY
Liquid Scintillation Detectors
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
BETATRONS
Stability
Recirculating accelerator studies. Final report, 1 January 1985-31 March 1987, 12:48178 (R;US)
BHABHA ATOMIC RESEARCH CENTER
See BARC
BINARY MIXTURES
Equations of State
Supercritical aqueous systems under high pressure. A statistical-thermodynamical equation of state and experimental investigations, 12:47992 (R;DE;In German)
Field Tests
Binary mixtures in exhaust-air heat pump, 12:47657 (R;FI;In Finnish)
High Pressure
Supercritical aqueous systems under high pressure. A statistical-thermodynamical equation of state and experimental investigations, 12:47992 (R;DE;In German)
BIOGAS
See METHANE
BIOGAS PROCESS
Cost
Biogas originating from the waste collected to the Vuosaari dumping site, 12:47261 (R;FI;In Finnish)
Pilot Plants
Biogas originating from the waste collected to the Vuosaari dumping site, 12:47261 (R;FI;In Finnish)
BIOLOGICAL MATERIALS
See also FOREST LITTER
Quantitative Chemical Analysis
Development and method of use of a mass spectrometric isotope dilution analysis within the use of negative thermoionisation for determination of boron traces, 12:47938 (R;DE;In German)
BIOLOGICAL SHIELDS
Power Distribution
MMKENG code set to calculate radiation energy release in reactor cores and shields, 12:47430 (R;SU;In Russian)
BIOLOGICAL WARFARE
Chemical warfare - biological defense research obligations. Annual report, 1 October 1985-30 September 1986, 12:47798 (R;US)
Military Personnel
Development of a liquid isotonic ration for consumption in an NBC (nuclear, biological, or chemical) environment. Final report, August 1982-September 1983, 12:47796 (R;US)
BIOMASS
Data Compilation
Biomass conversion technical information service, 12:47301 (R;FI;In Finnish)
Documentation
Biomass conversion technical information service, 12:47301 (R;FI;In Finnish)
Gasification
Gasification by means of a circulating fluidized bed for oil substitution in lime kilns - construction and operation of a pilot plant, 12:48158 (R;SE;In Swedish)
Information Systems
Biomass conversion technical information service, 12:47301 (R;FI;In Finnish)
Liquefaction
Hydroprocessing at CTH. 266028-2 Stage 2 (Refining of liquefied biomass to fuels), 12:47304 (R;SE;In Swedish and English)

Refining
Hydroprocessing at CTH. 266028-2 Stage 2 (Refining of liquefied biomass to fuels), 12:47304 (R;SE;In Swedish and English)
BIOMASS PLANTATIONS
Environmental Impacts
Environmental effects of energy crops cultivation, 12:47303 (R;SE;In Swedish)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Integral Doses
Radiation hygiene analysis of medical activities in Norway. Development of an analytical tool, 12:48987 (R;NO;In Norwegian)
Radiation hygiene analysis of medical activities in Norway. Integral dose: A basis of X-ray examination consequence calculations, 12:48476 (R;NO;In Norwegian)
Norway
Radiological diagnostic examinations in Norway - 1983, 12:48986 (R;NO)
Radiation Protection
Radiation hygiene analysis of medical activities in Norway. Development of an analytical tool, 12:48987 (R;NO;In Norwegian)
Risk Assessment
Radiation hygiene analysis of medical activities in Norway. Integral dose: A basis of X-ray examination consequence calculations, 12:48476 (R;NO;In Norwegian)
BIPHENYL
Electronic Structure
Graph theory in the study of metal cluster bonding topology: applications to metal clusters having fused polyhedra, 12:47954 (RA;US)
BIPYRIDINES
Chemical Reactions
Variation of alkylmethylviologen radical cation-water interactions in micelles and vesicles from ESEM spectroscopy: effect of alkyl chain length, 12:48001 (J;US)
BISMUTH
Electronic Structure
Generalized Kohn-Sham theory for low-energy electron scattering by atoms including relativistic effects, 12:47959 (RA;US)
BISMUTH 212
Isotope Production
Improved generator for the production and use of ^{212}Pb and ^{212}Bi, 12:48483 (J;GB)
BISMUTH OXIDES
Crystal Structure
Structural and dynamical studies of δ-Bi_2O_3 oxide ion conductors. IV. An EXAFS investigation of (Bi2O3)/sub 1-x/(M2O3)/sub x/ for M = 7, Er, and Yb, 12:47874 (J;US)
Electronic Structure
Structural and dynamical studies of δ-Bi_2O_3 oxide ion conductors. IV. An EXAFS investigation of (Bi2O3)/sub 1-x/(M2O3)/sub x/ for M = 7, Er, and Yb, 12:47874 (J;US)
BITUMENS
Chemical Composition
Preliminary evaluation of chemical indicators for the analysis of production losses from tar sand recovery, 12:47182 (R;US)
Oil Yields
Preliminary evaluation of chemical indicators for the analysis of production losses from tar sand recovery, 12:47182 (R;US)
Solvent Extraction
Preliminary evaluation of chemical indicators for the analysis of production losses from tar sand recovery, 12:47182 (R;US)
Thermal Recovery
Preliminary evaluation of chemical indicators for the analysis of production losses from tar sand recovery, 12:47182 (R;US)
BITUMINOUS COAL
Combustion Kinetics
Combustion of coal-water slurries, 12:47113 (J;GB)
Radiation Absorption Analysis
Investigation of the absorption and scattering behaviour of gamma radiation in fine grained hard coal and coal slurry due to the photo effect and Compton effect with regard to determining the ash and solid contents, 12:48237 (R;DE;In German)
Radiation Scattering Analysis
Investigation of the absorption and scattering behaviour of gamma radiation in fine grained hard coal and coal slurry due to the photo effect and Compton effect with regard to determining the ash and solid contents, 12:48237 (R;DE;In German)
BL LACERTAE OBJECTS
Synchrotron Radiation
IRAS observations of BL Lac objects, 12:48679 (RA;US)
BLACK SHALES
Natural Gas Wells
Exploration-production studies in newly drilled Devonian Shale gas wells. Annual report, February 1, 1986-January 31, 1987, 12:47167 (R;US)
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLAST FURNACES
Fuel Feeding Systems
Blast furnace coal injection at minimum cost, 12:47104 (R;XE)
BLASTING
See EXPLOSIVE FRACTURING
BLEOMYCIN
Radiosensitivity Effects
Growth of hemopoietic precursor cells (CFU-C) of adriamycin-treated or whole-body-irradiated dogs with or without bleomycin in vitro, 12:48497 (R;DE;In German)
BLOOD PLATELETS
Biological Functions
Effect of thromobocytopenia on atherosclerosis in rabbits with dietary hypercholesterolemia, 12:48487 (RA;US)
Biological Localization
Effect of vigorous short term exercise on the splenic platelet pool, 12:48490 (RA;ZA)
Biosynthesis
Effect of thrombopoetic substances on megakaryocyte metabolism, 12:48488 (RA;US)
Kinetics
Simulation of platelet kinetics, 12:48474 (RA;ZA)
BNL
Experiment Planning
Science with multiply-charged ions at Brookhaven National Laboratory, 12:48711 (RA;US)
Ion Sources
Science with multiply-charged ions at Brookhaven National Laboratory, 12:48711 (RA;US)
BOILERS
See also REFUSE-FUELED BOILERS
Air Pollution
Evaluation of utility-boiler radiant furnace residence time/temperature characteristics: field tests and heat-transfer modeling. Final report, October 1982-September 1985, 12:47352 (R;US)
Cyclone Combustors
Design, fabrication and testing of an advanced cyclone coal combustor of an industrial boiler, using coal slurries as a fuel: Phase 2, Combustor installation and test: Final report, June 3, 1985 to June 15, 1987, 12:48154 (R;US)
Dry Scrubbers
Emission measurements for wet-dry flue gas cleaning, 12:47062 (R;SE;In Swedish)
In-Service Inspection
Infrared for nondestructive boiler tube inspection, 12:47384 (RA;US)
Ultrasonic boiler inspection and economic analysis guidelines, 12:47385 (RA;US)
Nondestructive Testing
Infrared for nondestructive boiler tube inspection, 12:47384 (RA;US)

Performance
Evaluation of utility-boiler radiant furnace residence time/temperature characteristics: field tests and heat-transfer modeling. Final report, October 1982-September 1985, 12:47352 (R;US)
Retrofitting
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
Design, fabrication and testing of an advanced cyclone coal combustor of an industrial boiler, using coal slurries as a fuel: Phase 2, Combustor installation and test: Final report, June 3, 1985 to June 15, 1987, 12:48154 (R;US)
Ultrasonic Testing
Ultrasonic boiler inspection and economic analysis guidelines, 12:47385 (RA;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BONE MARROW
Radiation Doses
Treatment of mycosis fungoidis by low energy x-rays, 12:48473 (RA;ZA)
BONNER SPHERE SPECTROMETERS
Methodical aspects of Bonner multisphere spectrometer application in radiation researches at the IHEP accelerator, 12:48236 (R;SU;In Russian)
BONNEVILLE POWER ADMINISTRATION
Alarm Systems
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)
Communications
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)
Expert Systems
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)
BOR-60 REACTOR
Dimitrovgrad, USSR
Fuel Rods
Study on the performance of fuel elements with carbide and carbide-nitride fuel, 12:47424 (R;SU;In Russian)
Steam Generators
Results of the PG-2 steam generator life tests at the BOR-60 reactor. Thermal and hydrodynamic characteristics under steady and transient conditions, 12:47423 (R;SU;In Russian)
BORON
Isotope Dilution
Development and method of use of a mass spectrometric isotope dilution analysis within the use of negative thermoionisation for determination of boron traces, 12:47938 (R;DE;In German)
Mass Spectroscopy
Development and method of use of a mass spectrometric isotope dilution analysis within the use of negative thermoionisation for determination of boron traces, 12:47938 (R;DE;In German)
BORON ARSENIDES
Electronic Structure
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
Phase Transformations
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
Stability
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
BORON HYDRIDES
Chemical Reactions
Mechanism of activation of coordinated olefins toward nucleophilic attack, 12:47979 (RA;US)
Energy Gap
Ab-initio MO electronic structure calculations of defect-pair complexes in silicon, 12:47983 (RA;US)
BORON NITRIDES
Crystal Growth
Boron nitride: composition, optical properties and mechanical behavior, 12:47861 (R;US)
Electronic Structure
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
Mechanical Properties
Boron nitride: composition, optical properties and mechanical behavior, 12:47861 (R;US)
Optical Properties
Boron nitride: composition, optical properties and mechanical behavior, 12:47861 (R;US)
Phase Transformations
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
Stability
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
BORON PHOSPHIDES
Electronic Structure
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
Phase Transformations
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
Stability
Theoretical study of BN, BP, and BAs at high pressures, 12:47863 (J;US)
BOTTOM MESONS
See B MESONS
BOTTOM-HOLE PRESSURE
See WELL PRESSURE
BOUNDARY LAYERS
See also PLASMA SCRAPE-OFF LAYER
Laminar Flow
Influence of a heated leading edge on boundary layer growth, stability, and transition, 12:48745 (J;US)
BOUNDARY VALUE PROBLEMS
See BOUNDARY-VALUE PROBLEMS
BOUNDARY-VALUE PROBLEMS
I Codes
IMPSOR: A fully vectorized FORTRAN code for three dimensional moving boundary problems with Dirichlet or Neumann boundary conditions, 12:49208 (R;US)
Moving-Boundary Conditions
IMPSOR: A fully vectorized FORTRAN code for three dimensional moving boundary problems with Dirichlet or Neumann boundary conditions, 12:49208 (R;US)
Numerical Solution
The method of lines for time dependent free boundary problems, 12:49216 (R;US)
BPA

BRACKISH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
BRAIN
Metastases
Influence of CT control examinations on the irradiation planning for patients with cerebral metastases, 12:48468 (R;DE;In German)
Neoplasms
Serial PET studies of human cerebral malignancy with [1-^{11}C]putrescine and [1-^{11}C]2-deoxy-D-glucose, 12:48479 (J;US)
Positron Computed Tomography
Positron-emitting analogs of SCH 23390 for the study of dopamine D1 receptors, 12:48486 (J;GB)
Serial PET studies of human cerebral malignancy with [1-^{11}C]putrescine and [1-^{11}C]2-deoxy-D-glucose, 12:48479 (J;US)
Turnover of brain monoamine oxidase measured in vivo by positron emission tomography using L-[^{11}C]deprenyl, 12:48478 (J;GB)
Single Photon Emission Computed Tomography
Design, synthesis and evaluation of redox radiopharmaceuticals: a potential new approach for the development of brain imaging agents, 12:48482 (J;GB)

BREEDING BLANKETS
Tritium Recovery
Mixing and mass transfer in bubble extractor: its application to tritium extraction from 17Li83Pb, 12:49129 (R;FR)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BRIDGES (ELECTRIC)
See ELECTRIC BRIDGES
BRINES
Environmental Effects
Gulf coast salt domes and the strategic petroleum reserve, 12:47165 (BA;US)
Oxidation
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis; Residual brine treated by wet-air oxidation, 12:47191 (R;US)
Radionuclide Migration
Quarterly brine migration data report, January-March 1985: Nuclear waste repository simulation experiments (brine migration), Asse Mine of the Federal Republic of Germany, 12:47208 (R;US)
Waste Disposal
Gulf coast salt domes and the strategic petroleum reserve, 12:47165 (BA;US)
BROMINE COMPOUNDS
Chemical Reactions
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Radiolysis
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
BROOKHAVEN 200-MEV LINAC
Design
BLIP II: a new spallation radionuclide research and production facility (Brookhaven Linac Isotope Producer), 12:47253 (J;GB)
Performance
BLIP II: a new spallation radionuclide research and production facility (Brookhaven Linac Isotope Producer), 12:47253 (J;GB)
BROOKHAVEN AGS
Antiproton Beams
Proceedings of the 1986 summer workshop on antiproton beams in the 2-10 GeV/c range, 12:48171 (R;US)
Experiment Planning
Low energy antiproton possibilities at BNL, 12:48170 (R;US)
BROOKHAVEN NATIONAL LABORATORY

Boilers
Infrared for nondestructive boiler tube inspection, 12:47384 (RA;US)
Ultrasonic boiler inspection and economic analysis guidelines, 12:47385 (RA;US)
Chemical Analysis
Proceedings of the symposium on chemical phenomena associated with radioactivity releases during severe nuclear plant accidents, 12:47483 (R;US)
Fission Product Release
Assessment of effect of dissolved species on stable droplet sizes in PWR containments post fault, 12:47523 (RA;US)
Fission product release from core-concrete melts, 12:47529 (RA;US)
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Fission Products
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part I, 12:47491 (RA;US)
Experimental study of radiolytic effect on dilute aqueous iodide solution, 12:47525 (RA;US)
Fission product release from core-concrete melts, 12:47529 (RA;US)
Fuel Elements
Fuel performance annual report, 12:47541 (J;US)
Properties of materials for water reactor fuel elements and methods of measurement: Proceedings of a technical committee meeting, 12:47406 (R;AT)
Fuel-Coolant Interactions
Hydrogen generation during fuel-coolant interactions, 12:47528 (RA;US)
In Pile Loops
Detection of stress corrosion cracks in reactor pressure vessel and primary coolant system anchor studs, 12:47382 (RA;US)
In-Service Inspection
Application of medical UT technology to the utility industry, 12:47372 (RA;US)
Feature-enhanced imaging, 12:47378 (RA;US)
Loss of Coolant
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part II, 12:47492 (RA;US)
Ex-plant consequence analysis: models, typical results, uncertainties, chemistry, 12:47485 (RA;US)
Review of new integral determinations of decay heat, 12:47466 (R;US)
Severe accident behavior, 12:47484 (RA;US)
Meltdown
Corrosion and deposition studies of stainless steel exposed to aerosols containing Te, Cs, I, Sn, Mn, Ag and B_2O_3 at 300 to 1000°C in a reducing ($H_2/H_2O/N_2$) environment, 12:47498 (RA;US)
Nondestructive Testing
EPRI Nondestructive Evaluation Center: 1986 annual report, 12:47470 (R;US)
Pipes
Application of medical UT technology to the utility industry, 12:47372 (RA;US)
Evaluation of a new gamma scanning method for detection and sizing of intergranular stress corrosion cracking, 12:47375 (RA;US)
IntraSpect/2 and IntraSpect/98 enhancements and establishment of rapid field deployment status, 12:47380 (RA;US)
Piping inspection activities at the EPRI NDE center, 12:47401 (RA;US)
Ultrasonic wave scattering and characterization: centrifugally cast stainless steel, 12:47373 (RA;US)
Utility guide to advanced UT systems for PSI and ISI, 12:47371 (RA;US)
Pressure Vessels
Detection of stress corrosion cracks in reactor pressure vessel and primary coolant system anchor studs, 12:47382 (RA;US)
Primary Coolant Circuits
Leak-detection technology for reactor primary systems, 12:47539 (J;US)
Radioactive Effluents
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Radioactivity Transport
Activity buildup in the recirculation system of boiling water reactors, 12:47369 (R;CH;In German)
Reactor Accidents
Assessment of effect of dissolved species on stable droplet sizes in PWR containments post fault, 12:47523 (RA;US)
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part I, 12:47491 (RA;US)
CSNI source term task force review, 12:47531 (RA;US)
Fission product deposition behavior, 12:47508 (RA;US)
Hydrogen generation during fuel-coolant interactions, 12:47528 (RA;US)
Influence of chemical form on cesium revaporization from the reactor coolant system, 12:47497 (RA;US)
Integrated analysis of fission product transport in reactor coolant systems, 12:47495 (RA;US)
Iodine behavior in containment under LWR accident conditions, 12:47518 (RA;US)
Modeling the chemical behavior of radionuclides in severe nuclear accidents, 12:47509 (RA;US)
Models for aerosol rate processes in nuclear reactor source term studies, 12:47512 (RA;US)
Proceedings of the symposium on chemical phenomena associated with radioactivity releases during severe nuclear plant accidents, 12:47483 (R;US)

CAES PLANT
See COMPRESSED AIR STORAGE POWER PLANTS

CALCIUM 40 TARGET

Antiproton Reactions
Calculation of reaction cross sections and scattering amplitude at the zero angle for nucleons and antinucleons of mean energies on nuclei, 12:48909 (RA;SU;In Russian)

Calcium 40 Reactions
Transparency, stopping power and thermalization of nuclear matter in the Ca+Ca and Nb+Nb reactions at E/A=400 MeV: classical equation of motion approach, 12:48923 (R;SU)

Electron Reactions
Inclusive charge longitudinal response in finite nuclei, 12:48954 (R;FR)
RPA spin-isospin nuclear response in the deep inelastic region, 12:48952 (R;FR)

Kaon Plus Reactions
K^+ as a probe of partial deconfinement in nuclei, 12:48967 (J;US)

Proton Reactions
Calculation of reaction cross sections and scattering amplitude at the zero angle for nucleons and antinucleons of mean energies on nuclei, 12:48909 (RA;SU;In Russian)

Response Functions
Inclusive charge longitudinal response in finite nuclei, 12:48954 (R;FR)

CALCIUM COMPOUNDS
See also CALCIUM OXIDES

Physical Radiation Effects
Modeling of irradiation-induced amorphization in a titanate ceramic ($(CaPuTi_2O_7)$), 12:47901 (R;US)

CALCIUM FLUORIDES

Corrosive Effects
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)

Energy-Level Transitions
Multiphoton processes in a solid in a doubly rotating system by NMR, 12:48025 (RA;US)

Thermodynamics
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)

CALCIUM ISOTOPES

Isotope Separation
Mound activities in chemical and physical research: January-June 1987, 12:47991 (R;US)

CALCIUM OXIDES
Chemical Reactions
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)
Hydrogenation
Superconductivity in H/sub x/$YBa_2Cu_3O_7$, 12:47871 (J;US)
Sorptive Properties
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)
Specific Heat
Specific heat of the high T/sub c/ superconductors $(La,M)_2CuO_4$ and $YBa_2Cu_3O_7$ in magnetic fields (M = Ca,Sr), 12:47859 (R;US)
Transition Temperature
Superconductivity in H/sub x/$YBa_2Cu_3O_7$, 12:47871 (J;US)
CALDERAS
Geologic History
Deposits of the Creede Caldera, Colorado, 12:48535 (R;US)
Hydrology
An analysis of the hydrologic effects of proposed test drilling in the Winema National Forest near Crater Lake, Oregon, 12:47334 (R;US)
CALIFORNIA
See also COSO HOT SPRINGS
Estuaries
The ecology of Mugu Lagoon, California: An estuarine profile, 12:48421 (R;US)
Military Facilities
Waste-water characterization and hazardous-waste survey, Castle AFB, California. Final report, 22-27 September 1986, 12:48423 (R;US)
Public Lands
The federal Outer Continental Shelf leasing program in northern California, 12:47135 (R;US)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CALORIMETRY
Calibration
Absorbed dose calorimetry, 12:48984 (RA;ZA)
Recommendations
Application of prediction of equilibrium to servo-controlled calorimetry measurements, 12:47247 (R;US)
Time Dependence
Application of prediction of equilibrium to servo-controlled calorimetry measurements, 12:47247 (R;US)
CANADA
Coal
Cost and availability of Canadian coal, 12:47115 (R;GB)
CANCER
See NEOPLASMS
CANDU TYPE REACTORS
Reactor Accidents
Oxidation of UO_2 in air and steam with relevance to fission product releases, 12:47489 (RA;US)
The release and transport of fission products during oxidation of UO_2 in air, 12:47490 (RA;US)
CANINES
See DOGS
CANISTERS
See CONTAINERS
CANONICAL EQUATIONS
See DIFFERENTIAL EQUATIONS
CANOPIES
Photosynthesis
Method and apparatus for measuring solar radiation in a vegetative canopy, 12:47297 (P;US)
Solar Radiation
Method and apparatus for measuring solar radiation in a vegetative canopy, 12:47297 (P;US)
CAPACITY
Economic Analysis
Feasibility and incentives for the consideration of spent fuel operating histories in the criticality analysis of spent fuel shipping casks, 12:47204 (R;US)
CARBENES
Binding Energy
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2i$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
CARBIDES
See also CHROMIUM CARBIDES
SILICON CARBIDES
Binding Energy
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2i$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
CARBINOL
See METHANOL
CARBOHYDRATES
Tissue Distribution
Design, synthesis and evaluation of 2-deoxy-2-iodovinyl-branched carbohydrates as potential brain imaging agents, 12:48480 (J;GB)
CARBON
See also CARBON BLACK
GRAPHITE
Beam Optics
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Catalytic Effects
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)
Crystal Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Deposition
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Electronic Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Measuring Instruments
The standard Harwell Carbon Meter: Revision, 12:47425 (R;GB)
Oxygen 16 Reactions
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)
CARBON 11
Hot Atom Chemistry
Synthesis of [^{11}C]SCH 23390 for dopamine D1 receptor studies, 12:48084 (J;GB)
Radiochemistry
Improved synthesis of [1-^{11}C]putrescine, 12:48087 (J;GB)
New techniques for positron emission tomography in the study of human neurological disorders for the period June 15, 1987 through December 14, 1987, 12:48465 (R;US)
CARBON 12 REACTIONS
Fission
Experimental study of α-fission fragment correlations in the ^{232}Th(^{12}C,αf) reaction, 12:48899 (R;SU)
Nuclear Reaction Yield
Momentum spectra of pions and protons in p, /sup 12/C and /sup 22/Ne collisions with emulsion nuclei at 4.5 GeV/c, 12:48869 (RA;SU;In Russian)
CARBON 12 TARGET
Deuteron Reactions
On the mechanism of relativistic deuteron fragmentation on nuclei, 12:48947 (R;SU;In Russian)

Electron Reactions
Inclusive charge longitudinal response in finite nuclei, 12:48954 (R;FR)
Investigation of electrons with /sup 6/Li, /sup 9/Be, /sup 12/C, /sup 28/Si nuclei in the region of quasi-elastic peak and δ/sub 33/-resonace, 12:48868 (R;SU;In Russian)
Heavy Ion Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
Kaon Plus Reactions
K^+ as a probe of partial deconfinement in nuclei, 12:48967 (J;US)
Lanthanum 139 Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
Photonuclear Reactions
Carbon photodisintegration with nucleon pair production in intermediate energy range, 12:48881 (R;SU;In Russian)
Response Functions
Inclusive charge longitudinal response in finite nuclei, 12:48954 (R;FR)

CARBON 13
Isotopic Exchange
Vapor pressure isotope effects in liquid methylene difluoride, 12:48005 (J;US)

CARBON 14
Radioecological Concentration
Coral growth rings and the temporal history of nuclear $^{14}C/C$ and $^{90}Sr/Sr$ in the surface ocean: Final report, June 1, 1982-December 31, 1984, 12:48438 (R;US)

CARBON 14 COMPOUNDS
Chemical Preparation
Problems of synthesis and analysis of phosphonium compounds. 1. [/sup 14/C]alkyl- and aryl-[/sup 14/C]alkyl-triphenylphosphonium halogenides, 12:48059 (RA;DD;In German)
Synthesis and analysis of /sup 14/C-labelled DMPE and its derivatives (DMPE = 1,2-bis(dimethylphosphino)-ethane.), 12:48058 (RA;DD;In German)
Synthesis of [1-/sup 14/C]butane-2-on, 12:48060 (RA;DD;In German)
Synthesis of [nucleus-/sup 14/C]-labelled aromatic compounds. 3. Preparation of nucleus-labelled carboxylic acids and chloro phenols by Sandmeyer's reaction, 12:48061 (RA;DD;In German)
Radioecological Concentration
Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1986, 12:48501 (R;US)
Tissue Distribution
Whole-body autoradiography of [/sup 14/CH/sub 3/]DMPE distribution in the rat, 12:48507 (RA;DD;In German)
Whole-body autoradiography as screening test for myocardial affinity of organic cations. 2, 12:48508 (RA;DD;In German)

CARBON 14 TARGET
Proton Reactions
Isovector couplings for nucleon charge-exchange reactions at intermediate energies, 12:48882 (J;US)

CARBON BLACK
Catalytic Effects
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Porosity
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)

CARBON COMPOUNDS
See also CARBIDES
Charged-Particle Transport
Range-energy relation for Au ions, E/A≦150 MeV, 12:48978 (J;US)

CARBON CYCLE
Global Aspects
Carbon cycle: 1985 glacial to interglacial changes in the operation of the global carbon cycle, 12:48378 (J;US)
Uptake of anthropogenic CO_2 by lateral transport models of the ocean based on the distribution of bomb-produced ^{14}C, 12:48437 (J;US)

CARBON DIOXIDE
Adsorption
A modeling study of vacuum sorption characteristics of carbon dioxide on 4A zeolite molecular sieves, 12:47940 (R;US)
Biological Effects
Application of advanced very high resolution radiometer vegetation index to study atmosphere-biosphere exchange of CO_2, 12:48376 (J;US)
Effects of CO_2 enrichment and nutrition on growth, photosynthesis, and nutrient concentration of Alaskan tundra plant species (Carex bigelowii Torr.; Betula nana L.; Ledum palustre L.), 12:48532 (J;CA)
Chemisorption
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Ecological Concentration
Application of advanced very high resolution radiometer vegetation index to study atmosphere-biosphere exchange of CO_2, 12:48376 (J;US)
Carbon cycle: 1985 glacial to interglacial changes in the operation of the global carbon cycle, 12:48378 (J;US)
Electronic Structure
Charge deformation maps, molecular moments, and high-energy electron scattering, 12:47978 (RA;US)
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)
Enthalpy
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Entropy
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Environmental Transport
Application of advanced very high resolution radiometer vegetation index to study atmosphere-biosphere exchange of CO_2, 12:48376 (J;US)
Uptake of anthropogenic CO_2 by lateral transport models of the ocean based on the distribution of bomb-produced ^{14}C, 12:48437 (J;US)
Molecular Structure
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)
Phase Studies
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Thermal Diffusion
Mound activities in chemical and physical research: January-June 1987 (He(Xe)-CO_2), 12:47991 (R;US)
Vibrational States
IR diode laser study of vibrational energy distribution in CO_2 produced by UV excimer laser photofragmentation of pyruvic acid, 12:48026 (J;US)
Waste Product Utilization
Two-dimensional modeling of fossil-fueled power plant behavior when using CO_2-O_2 or CO_2-H_2O-O_2 mixtures, instead of air, to support combustion, 12:47054 (R;US)
Wave Functions
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)

CARBON DIOXIDE LASERS
Spectra
Ultrastable carbon dioxide (CO/sub 2/) lasers, 12:48126 (BA;US)
Stability
Ultrastable carbon dioxide (CO/sub 2/) lasers, 12:48126 (BA;US)

CARBON FIBERS
Chemical Preparation
Stability of bromine, iodine monochloride, copper (II) chloride, and nickel (II) chloride intercalated pitch-based graphite fibers, 12:47909 (R;US)

Stability
Stability of bromine, iodine monochloride, copper (II) chloride, and nickel (II) chloride intercalated pitch-based graphite fibers, 12:47909 (R;US)

CARBON IONS
Ion-Atom Collisions
L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions, 12:48731 (J;US)

CARBON MONOXIDE
Adsorption
Trifunctional catalysts for conversion of syngas to alcohols: Twelfth quarterly report for period June 1, 1987 to August 31, 1987, 12:47266 (R;US)
Chemisorption
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
Desorption
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
Hydrogenation
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
Indoor Air Pollution
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)
Nuclear Magnetic Resonance
Trifunctional catalysts for conversion of syngas to alcohols: Twelfth quarterly report for period June 1, 1987 to August 31, 1987, 12:47266 (R;US)

CARBON STEELS
Corrosion
Prediction and mitigation of erosive-corrosive wear in secondary piping systems of nuclear power plants, 12:47438 (R;US)
Erosion
Prediction and mitigation of erosive-corrosive wear in secondary piping systems of nuclear power plants, 12:47438 (R;US)
Fatigue
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Microstructure
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Chemical Reactions
Mechanism of activation of coordinated olefins toward nucleophilic attack, 12:47979 (RA;US)
Electronic Structure
Mechanism of activation of coordinated olefins toward nucleophilic attack, 12:47979 (RA;US)

CARBOXYLASE
Molecular Structure
Subunit interactions of ribulose bisphosphate carboxylase/oxygenase as determined by chemical cross-linking and site-directed mutagenesis, 12:48456 (J;US)

CARBYNES
Binding Energy
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_3^+$, $NbCH_3^+$, and $LaCH_2^+$, 12:48028 (J;US)

CARCINOGENS
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Toxicity
Development and application of algorithms for generating estimates of toxicity for the NOHS (National Occupational Hazard Survey) data base. Technical report, 12:48528 (R;US)

CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY

CASKS
See also SPENT FUEL CASKS
Design
Quarterly brine migration data report, January-March 1985: Nuclear waste repository simulation experiments (brine migration), Asse Mine of the Federal Republic of Germany, 12:47208 (R;US)

CATALYSIS
Chemical Preparation
Development and process evaluation of improved Fischer-Tropsch slurry catalysts: Quarterly technical progress report for the period 1 January to 31 March 1987, 12:47260 (R;US)
Trifunctional catalysts for conversion of syngas to alcohols: Twelfth quarterly report for period June 1, 1987 to August 31, 1987, 12:47266 (R;US)
Performance Testing
Development and process evaluation of improved Fischer-Tropsch slurry catalysts: Quarterly technical progress report for the period 1 January to 31 March 1987, 12:47260 (R;US)
Sampling
Trifunctional catalysts for conversion of syngas to alcohols: Twelfth quarterly report for period June 1, 1987 to August 31, 1987, 12:47266 (R;US)

CATALYST SUPPORTS
Chemical Preparation
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)

CATALYSTS
See also ELECTROCATALYSTS
Chemical Preparation
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986 (Mo/C catalyst), 12:47020 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)
Performance Testing
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986 (Mo/C catalyst), 12:47020 (R;US)
Research Programs
Characterization of catalysts with metal-support effects and of the species adsorbed on their surfaces: Progress report, September 1, 1986-August 30, 1987, 12:47812 (R;US)
Surface Area
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986 (Mo/C catalyst), 12:47020 (R;US)

CAVITY RESONATORS
Higher mode oscillation damping system in the UNK accelerating unit, 12:48225 (R;SU;In Russian)

CCD
See CHARGE-COUPLED DEVICES

CEA
Radioactive Waste Disposal
Analogue studies at the French Atomic Commission (CEA), 12:47209 (R;FR)

Feasibility Studies
Atmospheric fluidized-bed combustion waste utilization in cement and sulfuric acid: Preliminary feasibility study, 12:47112 (R;US)
Marketing Research
Atmospheric fluidized-bed combustion waste utilization in cement and sulfuric acid: Preliminary feasibility study, 12:47112 (R;US)
CENTRAL HEATING PLANTS
Energy Expenses
Adaptive capacity of energy systems. Risks of long-range engagements. Method of analysis and results, 12:47575 (R;SE;In Swedish)
CENTRAL NERVOUS SYSTEM
See also BRAIN
Neoplasms
CNS cancers and radiation exposure: a case-control study among workers at two nuclear facilities, 12:48515 (J;US)
CERAMICS
Fatigue
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)
Fracture Properties
Method for dynamic fracture initiation testing of ceramics, 12:47854 (R;US)
Inspection
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)
Microstructure
NDE [nondestructive evaluation] of advanced structural ceramics, 12:48135 (R;US)
Nondestructive Analysis
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)
Nondestructive Testing
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)
Needs assessment for nondestructive testing and materials characterization for improved reliability in structural ceramics for heat engines, 12:48140 (R;US)
Plasma Arc Spraying
Thick thermal barrier coatings, 12:47880 (BA;US)
Production
Processing and characterizing glass-ceramics, 12:47860 (RA;US)
Sliding Friction
Unlubricated sliding wear of ceramic materials, 12:47876 (BA;US)
Stress Analysis
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)
Thermal Conductivity
Thick thermal barrier coatings, 12:47880 (BA;US)
Thermodynamic Properties
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)
Ultrasonic Testing
NDE [nondestructive evaluation] of advanced structural ceramics, 12:48135 (R;US)
Wear
Unlubricated sliding wear of ceramic materials, 12:47876 (BA;US)
CEREALS
Electron Spin Resonance
Point of view about identification of irradiated foods by electron spin resonance, 12:48493 (R;FR)
CERIUM ALLOYS
Electronic Structure
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Magnetic Properties
Band description of materials with localizing orbitals, 12:47858 (RA;US)
CERIUM COMPLEXES
Stability
Complex formation of lanthanoids with citrate ligands, 12:48077 (RA;DD;In German)
Physico-chemical properties of lanthanoid-albumin complexes, 12:48075 (RA;DD;In German)
CERIUM ISOTOPES
Deformed Nuclei
Octupole instability in the heavy barium region, 12:48902 (R;US)
High Spin States
Octupole instability in the heavy barium region, 12:48902 (R;US)
CERIUM SILICIDES
Lattice Parameters
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
Magnetic Properties
Observation of the highest ground-state magnetic moment of Ce in CeSi: Possibility of a quartet ground state, 12:47920 (J;US)
Magnetic Susceptibility
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
Magnetoresistance
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
CESIUM
Chemical Reaction Kinetics
Analysis of iodine chemical form for the severe fuel damage scoping test and 1-1 test, 12:47520 (RA;US)
Crystal Structure
New materials at high pressure, 12:47964 (RA;US)
Electronic Structure
New materials at high pressure, 12:47964 (RA;US)
Phase Studies
New materials at high pressure, 12:47964 (RA;US)
CESIUM 134
Radioecological Concentration
Radioactive cesium in grain 1986, 12:48409 (R;NO;In Norwegian)
CESIUM 137
Radioecological Concentration
Radioactive cesium in grain 1986, 12:48409 (R;NO;In Norwegian)
Real time air assay of radionuclides by cryogenics, 12:48395 (RA;US)
CESIUM CHLORIDES
Magnetic Properties
Neutron diffraction of the field induced magnetism in CsFeCl/sub 3/: Statics and dynamics of an incommensurate magnetic structure, 12:47898 (R;DE;In German)
CESIUM COMPOUNDS
See also CESIUM CHLORIDES
CESIUM IODIDES

Dehydration
Study by solid-state NMR of ^{133}Cs and ^{1}H of a hydrated and dehydrated cesium mordenite, 12:48010 (J;US)
NMR Spectra
Study by solid-state NMR of ^{133}Cs and ^{1}H of a hydrated and dehydrated cesium mordenite, 12:48010 (J;US)
CESIUM IODIDES
Compression
Pressure-induced disproportionation of cesium iodide, 12:47923 (J;US)
Decomposition
Pressure-induced disproportionation of cesium iodide, 12:47923 (J;US)
CFFF
See MHD GENERATOR CFFF
CHARGE EXCHANGE
Cross Sections
Reduced-mass Fock-Tani representations for $a^+ V(b^+ c^-)= (a^+ c^-)+b^+$ and first-order results for (abc)=(ppe, epe, $\mu p\mu$, $\mu d\mu$, and $\mu t\mu$). Technical report, 12:48697 (R;US)
CHARGE-COUPLED DEVICES
Design
The performance of CCD array detectors for application in high-resolution tomography, 12:48295 (BA;US)
Image Processing
The performance of CCD array detectors for application in high-resolution tomography, 12:48295 (BA;US)
CHARGED PARTICLES
In addition to the specific charged particles listed below, see also the list under ELEMENTARY PARTICLES.

CHEMICAL ANALYSIS
See also ACTIVATION ANALYSIS
Channel and analyte dynamics in the high-voltage spark discharge using Raman, fluorescence, and emission spectroscopies, 12:47942 (J;US)
Unified analysis of noncomparative methods for measuring the molar absorptivity of triplet-triplet transitions, 12:47943 (J;US)
CHEMICAL BONDS
Cleavage
Thermally initiated carbon-carbon bond-cleavage reactions occurring during coal gasification. Annual report, April 1986-March 1987, 12:47031 (R;US)
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
CHEMICAL EFFLUENTS
Ecological Concentration
Predictive models and field studies of the fate of complex mixtures, 12:48435 (BA;US)
Solubility of mixtures and its application to toxicity, 12:48436 (BA;US)
Solubility
Solubility of mixtures and its application to toxicity, 12:48436 (BA;US)
Toxicity
Solubility of mixtures and its application to toxicity, 12:48436 (BA;US)
CHEMICAL EXPLOSIONS
Blast Effects
Vulnerability evaluation of the keyworker blast shelter. Final report, 12:49229 (R;US)
Stemming Materials
Stemming column phenomenology, 12:48298 (R;US)
CHEMICAL FEEDSTOCKS
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
CHEMICAL INDUSTRY
Hazardous Materials
Industry-wide studies report of an in-depth survey at Firestone Synthetic Rubber and Latex Company, Lake Charles, Louisiana, 12:48344 (R;US)
Superfund Record of Decision (EPA Region 3): Drake Chemical Site (Phase 2), Lock Haven, Clinton County, Pennsylvania (second remedial action), May 1986. Final report, 12:48445 (R;US)
Superfund Record of Decision (EPA Region 1): Baird and McGuire, Holbrook, Massachusetts, September 1986. Final report, 12:48415 (R;US)
Process Heat
Competitive position of natural gas: high-temperature fluid heating in petroleum refining and chemicals manufacturing. Topical report, 12:47171 (R;US)
CHEMICAL MUTAGENS

Research Programs
Chemical Technology Division progress report for the period April 1, 1985 to December 31, 1986, 12:47933 (R;US)
Chemical Technology Division annual technical report, 1986, 12:47932 (R;US)
Theoretical studies of electron and proton transfer processes in fluids: Progress report, August 1986 to September 1987, 12:47948 (R;US)
CHERNOBYLSK-4 REACTOR
Reactor Accidents
Chernobyl accident and Denmark (Main report), 12:47477 (R;DK;In Danish)
Chernobyl accident and Denmark. Appendices. Vol. 2, 12:47479 (R;DK;In Danish)
Chernobyl accident and Denmark. Appendices. Vol. 1, 12:47478 (R;DK;In Danish)
Chernobyl reactor accident and its consequences. 3. Rev. Ed , 12:47474 (R;DE;In German)
Chernobyl accident sequence, 12:47542 (J;US)
Chernobyl source term, 12:47543 (J;US)
Chernobyl accident - its impact on Sweden, 12:47544 (J;US)
Onsite response to the accident at Chernobyl (accident management), 12:47545 (J;US)
Recent findings about the Chernobyl reactor accident. Pt. 1 and 2. Pt. 1: Summary and evaluation of information provided on the plant and the course of the accident. Pt. 2: Radiological repercussions in the Federal Republic of Germany and other European countries. As of October 1986, 12:47471 (R;DE;In German)
Scenario of the accident of Chernobyl. Technical aspects and safety, 12:47465 (R;FR;In French)
Transfrontier Contamination
Radioactive cesium in grain 1986 (Norway), 12:48409 (R;NO;In Norwegian)
Recent findings about the Chernobyl reactor accident. Pt. 1 and 2. Pt. 1: Summary and evaluation of information provided on the plant and the course of the accident. Pt. 2: Radiological repercussions in the Federal Republic of Germany and other European countries. As of October 1986, 12:47471 (R;DE;In German)
CHESAPEAKE BAY
Water Quality
Restoration of striped bass in the Patuxent River, 12:47282 (RA;US)
CHIRALITY
QCD with dynamical fermions: The chiral transition, 12:48857 (RA;US)
CHLOR-ALKALI INDUSTRY
See CHEMICAL INDUSTRY
CHLORINE
CHLORINATED ALIPHATIC HYDROCARBONS
Air Pollution
Photooxidation of allyl chloride, 12:48362 (R;US)
Density
Electrical conductivity, viscosity, and density of a two-component ionic system at its critical point, 12:48002 (J;US)
Electric Conductivity
Electrical conductivity, viscosity, and density of a two-component ionic system at its critical point, 12:48002 (J;US)
Molecular Structure
Rotational barriers. 1. 1,2-dihaloethanes, 12:48012 (J;US)
Rotational States
Rotational barriers. 1. 1,2-dihaloethanes, 12:48012 (J;US)
Viscosity
Electrical conductivity, viscosity, and density of a two-component ionic system at its critical point, 12:48002 (J;US)
Water Pollution
Gaseous behavior of tce (trichloroethylene) overlying a contaminated aquifer, 12:48405 (R;US)
CHLORINATED AROMATIC HYDROCARBONS
Air Pollution
Health-Hazard Evaluation Report HETA 84-180-1776, Jacksonville Fire Department, Jacksonville, Florida, 12:48351 (R;US)
Ecological Concentration
Report from the project 'Transport of persistent organical substances to, and from the atmosphere', 12:48332 (R;SE;In Sweden)
Waste Management
PCB [polychlorinated biphenyls] annual report for Oak Ridge National Laboratory, 1986 (Polychlorinated biphenyls), 12:49154 (R;US)
CHLORINE
Chemical Reactions
Dynamics calculations of kinetic isotope effects for the reactions of muonium atoms with F_2 and Cl_2, 12:47970 (RA;US)
Reinvestigation of the laser-initiated Cl_2/HBr chain reaction: absolute rate constants and the $v = 2/v = 1$ ratio from Cl + HBr → HCl(v) + Br, 12:48008 (J;US)
Photolysis
Reinvestigation of the laser-initiated Cl_2/HBr chain reaction: absolute rate constants and the $v = 2/v = 1$ ratio from Cl + HBr → HCl(v) + Br, 12:48008 (J;US)
CHLORINE 36
Diffusion
Migration in alluvium of chlorine-36 and tritium from an underground nuclear test, 12:48404 (R;US)
CHLORINE CHLORIDES
See CHLORINE
CHLORINE COMPOUNDS
Formation Heat
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
Ionization Potential
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)

CHROMIUM
Ion Implantation
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)
Water Pollution
Superfund Record of Decision (EPA Region 6): Odessa Chromium 1, Odessa, Texas, September 1986. Final report, 12:48446 (R;US)
CHROMIUM ALLOYS
See also CHROMIUM STEELS
STAINLESS STEELS
Weldability
The role of composition and microstructure gradients on weld metal properties and behavior, 12:47835 (RA;US)
CHROMIUM CARBIDES
Chemical Preparation
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
Hardness
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
Wear Resistance
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
CHROMIUM COMPOUNDS
See also CHROMIUM CARBIDES
CHROMIUM OXIDES
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Fracture Properties
Effect of ZrO_2 inclusions on fracture properties of $MgCr_2O_4$, 12:47873 (J;GB)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermal Shock
Effect of ZrO_2 inclusions on fracture properties of $MgCr_2O_4$, 12:47873 (J;GB)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
CHROMIUM IONS
Electron-Ion Collisions
Distorted-wave calculations of the electron-impact ionization of highly ionized Na-like ions, 12:48730 (J;US)
CHROMIUM OXIDES
Ion Implantation
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)
CHROMIUM STEELS
See also STAINLESS STEEL-440
Fatigue
The fatigue behavior of weldments in ferritic steels at elevated temperatures: Technical progress report, 12:47837 (RA;US)

COAL
See also BROWN COAL
Biodegradation
Solubilization of coal by an extracellular product from Streptomyces setonii 75Vi2, 12:47034 (J;NL)
Carbonization
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Chemical Analysis
Applications of transmission electron microscopy to coal chemistry, 12:47046 (J;GB)
Characterization of eleven coals and their combustion behaviour, 12:47108 (R;SE;In Swedish)
Characterization of twenty coals and their combustion behaviour, 12:47109 (R;SE;In Swedish)
Experimental electron beam microanalytical procedure for determining oxygen in coal, 12:47049 (J;GB)
Rapid dissolution technique for colorimetric determination of nitrogen in coals, 12:47048 (J;GB)
Chemical Properties
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Double cross polarization (DCP)/MAS NMR of coal derivatives: a view of the reaction center using a cross polarization filter, 12:47053 (BA;US)
Physical and chemical properties of finely ground de-ashed coal. Final report, April 1984-February 1987, 12:47042 (R;US)
Cleaning
Performance testing of proprietary coal cleaning equipment, 12:47011 (R;XE)
Upgrading Upper Kittanning Seam coal quality to improve power plant performance: Coal cleaning test facility campaign report No. 6, 12:47025 (R;US)
Cocombustion
Natural gas/pulverized-coal cofiring performance testing at an electric-utility boiler. Topical report, June-October 1986, 12:47353 (R;US)
Coking
Comparison between the behaviour of conventional or pretreated blends in large-scale coking ovens, 12:47027 (R;XE;In Italian)
Heating technique in coal carbonization processes - material balances for the coking process, 12:47026 (R;XE;In French)

Combustion
Blast furnace coal injection at minimum cost, 12:47104 (R;XE)
Characterization of eleven coals and their combustion behaviour, 12:47108 (R;SE;In Swedish)
Characterization of twenty coals and their combustion behaviour, 12:47109 (R;SE;In Swedish)
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Recycling of rest products from SO/sb 2/-separation in low NO/sub (x)/ burners , 12:47061 (R;SE;In Swedish)
Combustion Properties
Characterization of eleven coals and their combustion behaviour, 12:47108 (R;SE;In Swedish)
Comminution
[Coal disintegration by high pressure water jet]: Technical progress report No. 12 for the period from August 15 to September 15, 1987, 12:47010 (R;US)
Comparative Evaluations
Characterization of twenty coals and their combustion behaviour, 12:47109 (R;SE;In Swedish)
Devolatilization
Heteroatom containing organics during liquefaction, 7/1/87-7/1/88, 12:47022 (R;US)
Production of high quality liquid fuels from coal by mild pyrolysis of coal-lime mixtures, 12:47035 (J;US)
Dissolution
Rapid dissolution technique for colorimetric determination of nitrogen in coals, 12:47048 (J;GB)
Solubilization of coal by an extracellular product from Streptomyces setonii 75Vi2, 12:47034 (J;NL)
Energy Consumption
Direct reduction by the rotary-kiln method, 12:47103 (R;XE;In German)
Energy Demand
Business of coal, 12:47600 (BA;US)
Environmental Impacts
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)
Fluidized-Bed Combustion
Alkali measurement in PFBC and its control by a granular bed of activated bauxite, 12:47066 (BA;US)
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
Direct reduction of hematite fines with coal in a fluidized bed, 12:47106 (R;ZA)
Erosion calculations in a two-dimensional fluidized bed, 12:47114 (BA;US)
Leaching studies of solid wastes generated from fluidized bed combustion of low-rank western coals, 12:47065 (BA;US)
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)
Health Hazards
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)
Macerals
Characterization of coal macerals by high-resolution supercritical fluid chromatography. Annual report, May 1986-April 1987, 12:47043 (R;US)
Marketing
Coal Distribution Data, 1980-1986 (EIA Form 6). Data file, 12:47116 (R;US)
Materials Handling
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)
NMR Spectra
High temperature solid state CP-MAS-NMR of bituminous coals, 12:47051 (BA;US)
Solid ^{13}C-NMR relaxation study of coals, 12:47052 (BA;US)
Physical Properties
Characterization of eleven coals and their combustion behaviour, 12:47108 (R;SE;In Swedish)
Characterization of twenty coals and their combustion behaviour, 12:47109 (R;SE;In Swedish)
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Physical and chemical properties of finely ground de-ashed coal. Final report, April 1984-February 1987, 12:47042 (R;US)
Pollution Control
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)
Prices
Cost and availability of Canadian coal, 12:47115 (R;GB)
Pyrolysis
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Heteroatom containing organics during liquefaction, 7/1/87-7/1/88, 12:47022 (R;US)
Production of high quality liquid fuels from coal by mild pyrolysis of coal-lime mixtures, 12:47035 (J;US)
Quality Control
Upgrading Upper Kittanning Seam coal quality to improve power plant performance: Coal cleaning test facility campaign report No. 6, 12:47025 (R;US)
Reflectivity
Raw material and technological properties of hard coal as a function of total reflectance, 12:47040 (R;XE;In German)
Research Programs
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Solvent Extraction
Extended operation of the liquid solvent extraction process, 12:47028 (R;XE)
Structural Chemical Analysis
Double cross polarization (DCP)/MAS NMR of coal derivatives: a view of the reaction center using a cross polarization filter, 12:47053 (BA;US)
High temperature solid state CP-MAS-NMR of bituminous coals, 12:47051 (BA;US)
Solid ^{13}C-NMR relaxation study of coals, 12:47052 (BA;US)
Sulfur Content
Sulphur in coal by programmed-temperature oxidation, 12:47045 (J;GB)
Supply and Demand
Cost and availability of Canadian coal, 12:47115 (R;GB)
Thermal Analysis
Sulphur in coal by programmed-temperature oxidation, 12:47045 (J;GB)
Transport
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)
Waste Management
Coal research projects. Supply, transport and the environment - 1987 supplement, 12:47056 (R;GB)

COAL DEPOSITS

Geologic History
Relationship between peat geochemistry and depositional environments, Cranberry Island, Maine, 12:47069 (J;NL)
Methane
Review of hydrologic testing in coal beds. Topical report, January 1985-December 1986, 12:47172 (R;US)
Research Programs
Coal research projects. Exploration, mining and preparation - 1987 supplement, 12:47092 (R;GB)

COAL FINES
Technology Assessment
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
Tribology
Tribological properties of coal slurries, 12:47041 (R;US)

COAL GASIFICATION
Catalysts
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Chemical Reactions
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Thermally initiated carbon-carbon bond-cleavage reactions occurring during coal gasification. Annual report, April 1986-March 1987, 12:47031 (R;US)
Combustion Products
Thermally initiated carbon-carbon bond-cleavage reactions occurring during coal gasification. Annual report, April 1986-March 1987, 12:47031 (R;US)
Diagnostic Techniques
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Economics
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Environmental Impacts
Characterization and disposal of coal-gasification waste products. Phase 2. Topical report, 1 May 1984-30 April 1986, 12:47060 (R;US)
Hot Gas Cleanup
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Information Needs
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Mathematical Models
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Pulverized Fuels
Physical and chemical properties of finely ground de-ashed coal. Final report, April 1984-February 1987, 12:47042 (R;US)
Redox Reactions
Electron-transfer mechanisms in thermochemical gasification: a quantitative quantum-mechanical investigation. Annual report, January-December 1986, 12:47032 (R;US)
Research Programs
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Sasol Process
Process description of the SASOL 1 coal-gasification plant. Topical report, 12:47030 (R;US)
Scaling Laws
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Technology Assessment
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Thermochemical Processes
Electron-transfer mechanisms in thermochemical gasification: a quantitative quantum-mechanical investigation. Annual report, January-December 1986, 12:47032 (R;US)
Waste Management
Characterization and disposal of coal-gasification waste products. Phase 2. Topical report, 1 May 1984-30 April 1986, 12:47060 (R;US)

COAL GASIFICATION PLANTS
Liners
Effect of ZrO_2 inclusions on fracture properties of $MgCr_2O_4$, 12:47873 (J;GB)
Materials Recovery
Characterization, extraction, and reuse of coal-gasification solid wastes. Volume 3. Technical and economic feasibility of bulk utilization and metal recovery for ashes from an integrated coal-gasification facility. Final report, April 1983-June 1986, 12:47059 (R;US)
Solid Wastes
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Waste Product Utilization
Characterization, extraction, and reuse of coal-gasification solid wastes. Volume 3. Technical and economic feasibility of bulk utilization and metal recovery for ashes from an integrated coal-gasification facility. Final report, April 1983-June 1986, 12:47059 (R;US)
Waste Water
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)

COAL INDUSTRY
Economic Analysis
Coal Distribution Data, 1980-1986 (EIA Form 6). Data file, 12:47116 (R;US)
Slurry Pipelines
Distributing the risks of interbasin water transfers under drought conditions: the dilemma posed by coal-slurry pipelines. A summary version, 12:47098 (R;US)

COAL LIQUEFACTION
See also SASOL PROCESS
Catalysts
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)
Chemical Reaction Kinetics
Extended operation of the liquid solvent extraction process, 12:47028 (R;XE)
Chemical Reactions
Heteroatom containing organics during liquefaction, 7/1/87-7/1/88, 12:47022 (R;US)
Chemical Reactors
ChemCoal Process Development Program: Final report (ChemCoal Process), 12:47023 (R;US)
Labelled Compounds
Heteroatom containing organics during liquefaction, 7/1/87-7/1/88, 12:47022 (R;US)
Organic Solvents
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
Process Development Units
ChemCoal Process Development Program: Final report (ChemCoal Process), 12:47023 (R;US)
Research Programs
Coal research projects. Properties, conversion and combustion - 1987, 12:47029 (R;GB)
Yields
ChemCoal Process Development Program: Final report (ChemCoal Process), 12:47023 (R;US)

COAL LIQUIDS
Aviation Fuels
Production of high-energy aviation fuels from advanced coal liquids. Phase 1. Final report, June 1986-February 1987, 12:47013 (R;US)

Chemical Analysis
Polycyclic aromatic hydrocarbon dermal tumorigens, 12:47044 (J;GB)
Gas Chromatography
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
Mass Spectroscopy
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
Nuclear Magnetic Resonance
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
Quality Control
Production of high quality liquid fuels from coal by mild pyrolysis of coal-lime mixtures, 12:47035 (J;US)
Solvent Properties
Automation of a hydrogen probe for determination of hydrogen solubilities in coal liquids solvents, 12:47039 (R;US)
Structural Chemical Analysis
Chemical composition and toxicological activity of liquefaction materials derived from different feed coal ranks, 12:47050 (J;NL)
Negative ion processes for the unambiguous identification of polycyclic aromatic compounds, 12:47047 (J;GB)
Toxicity
Chemical composition and toxicological activity of liquefaction materials derived from different feed coal ranks, 12:47050 (J;NL)

COAL MINERS
Injuries
Injury experience in coal mining, 1985, 12:47120 (R;US)
Occupational Diseases
Influence of underground smoking and dust on the symptomatology of chronic bronchitis and pulmonary emphysema in underground coal miners of an Aachen coal mine, 12:47117 (R;DE;In German)
Training
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)
Transport
Integrated manriding, 12:47090 (R;XE;In French)

COAL MINES
Accidents
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)
Inspection
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)
Safety Engineering
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)
Underground Mining
Guidelines for dust control in small underground coal mines. Handbook, 12:47096 (R;US)

COAL MINING
Accidents
Injury experience in coal mining, 1985, 12:47120 (R;US)
Acid Mine Drainage
Assessment of acid mine drainage in the Missouri River Basin for mutagenic and clastogenic activities. Final technical completion report, 12:47057 (R;US)
Ground Subsidence
Mined-land subsidence impacts on farmland with potential application to Illinois: a literature review. Information Circular/1987, 12:47067 (R;US)
Safety
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)
Safety Engineering
Clay veins: their occurrence, characteristics, and support. Report of Investigations/1987, 12:47095 (R;US)
Strata Control
Clay veins: their occurrence, characteristics, and support. Report of Investigations/1987, 12:47095 (R;US)
Surface Mining
Ecological recovery after reclamation of toxic spoils left by coal surface mining. Phase 2. An assessment of environmental changes following intensive remedial treatments. Report for July 1975-September 1981, 12:47058 (R;US)
Underground Mining
Analysis of rock chips produced during water-jet-assisted cutting. Report of Investigations/1987, 12:47097 (R;US)

COAL PLANERS
See COAL PLOWS

COAL PLOUGHS
See COAL PLOWS

COAL PLOWS
Field Tests
Development of techniques and equipment for working through faults, 12:47086 (R;XE;In German)
Monitoring
Operations diagnosis to improve plough utilization, 12:47085 (R;XE;In German)

COAL PREPARATION
Study of the thermal vaporization process of Hg from coal, 12:47033 (R;SE;In Swedish)
Cleaning
Physical and chemical properties of finely ground de-ashed coal. Final report, April 1984-February 1987, 12:47042 (R;US)
Comminution
Fine grinding of coal by the turbomilling process. Report of Investigations/1987, 12:47012 (R;US)
Research Programs
Coal research projects. Exploration, mining and preparation - 1987 supplement, 12:47092 (R;GB)
Slurries
Fine grinding of coal by the turbomilling process. Report of Investigations/1987, 12:47012 (R;US)

COAL SEAMS
Degassing
Computer-based monitoring and remote control of methane drainage systems, 12:47089 (R;XE)

COAL TAR
Chemical Composition
Comparison of coal tars generated by pyrolysis of Hanna coal and UCG [underground coal gasification] Hanna IVB coal tars, 12:47038 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Comparative Evaluations
AFC power plant. Feasibility study (Alkaline fuel cells - comparison with coal-fired power plants), 12:47627 (R;SE)

COAL-FIRED MHD GENERATORS
See also MHD GENERATOR CDIF
MHD GENERATOR CFFF
Bottoming Cycles
[The MHD [magnetohydrodynamics] coal fired flow facility]: Quarterly technical progress report, April-June 1987, 12:47610 (R;US)

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COATINGS
See also ANTIREFLECTION COATINGS
PROTECTIVE COATINGS

REFLECTIVE COATINGS
Wear Resistance
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
COBALT
Catalytic Effects
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
COBALT 57
Moessbauer Effect
Investigation of point defects after low temperature irradiation and qenching in diluted W/sup 57/Co alloys, 12:47821 (R;DE;In German)
COBALT 60
Emplacement
Quarterly brine migration data report, January-March 1985: Nuclear waste repository simulation experiments (brine migration), Asse Mine of the Federal Republic of Germany, 12:47208 (R;US)
COBALT COMPOUNDS
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Cost
Cogeneration and utility demand-side management, 12:47676 (RA;US)
Economic Analysis
Application of Organic Rankine Cycles (ORCs) to decentralized power generation. Preliminary study, 12:48165 (R;FI;In Finnish)
Electric alternatives to packaged cogeneration, 12:47693 (RA;US)
Reference guide to small cogeneration systems for utilities, 12:47694 (RA;US)
Feasibility Studies
Cogeneration for industrial and mixed-use parks: Research Project 1276-19, 12:47696 (RA;US)
New approaches to industrial development: energy-integrated industrial parks, 12:47695 (RA;US)
Implementation
Gas Research Institute's R & D Program for small cogeneration, 12:47684 (RA;US)
Legislation
Combined power plant using natural gas, 12:47348 (R;FI;In Finnish)
Massachusetts
PURPA revisited: the Massachusetts approach, 12:47681 (RA;US)
Performance
Reference guide to small cogeneration systems for utilities, 12:47694 (RA;US)
Planning
Cogeneration and utility demand-side management, 12:47676 (RA;US)
Cogeneration issues, 12:47687 (RA;US)
Implications of small cogeneration systems for electric utilities, 12:47685 (RA;US)
Integration of cogeneration and small projects in the utility grid, 12:47689 (RA;US)
Packaged cogeneration: energy alliance between customer and utility, 12:47686 (RA;US)
Strategic issues concerning cogeneration, 12:47688 (RA;US)
Utility leadership in cogeneration, 12:47691 (RA;US)
Utility participation in cogeneration ventures, 12:47690 (RA;US)
Regulations
Cogeneration issues faced by Houston Lighting & Power Company, 12:47674 (RA;US)
Cogeneration trends and prospects: implications for utilities, 12:47678 (RA;US)
Cogeneration: a major California resource, 12:47683 (RA;US)
Electric utilities cogeneration symposium, 12:47677 (RA;US)
Modest proposals: a state regulator's experience and expectations in cogeneration, 12:47682 (RA;US)
PURPA implementation: federal regulations and their impact on electric utilities, 12:47675 (RA;US)
Section 210 of PURPA revisited, 12:47680 (RA;US)
Research Programs
Cogeneration for industrial and mixed-use parks: Research Project 1276-19, 12:47696 (RA;US)
Overview of EPRI cogeneration research, 12:47692 (RA;US)
Reviews
Cogeneration trends and prospects, 12:47679 (RA;US)
Taxes
Combined power plant using natural gas, 12:47348 (R;FI;In Finnish)
Technology Assessment
Gas Research Institute's R & D Program for small cogeneration, 12:47684 (RA;US)
COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS
COHERENT ANTI-STOKES RAMAN SPECTROSCOPY
See RAMAN SPECTROSCOPY
COKE
Combustion Kinetics
Influence of radial distribution of burden in blast furnaces on the radial pattern of reduction of pig iron elements: experimental investigation using laboratory techniques, 12:47037 (R;XE;In Italian)
Mechanical Properties
Comparison between the behaviour of conventional or pretreated blends in large-scale coking ovens, 12:47027 (R;XE;In Italian)
COKE OVENS
By-Products
Heating technique in coal carbonization processes - material balances for the coking process, 12:47026 (R;XE;In French)
Material Balance
Heating technique in coal carbonization processes - material balances for the coking process, 12:47026 (R;XE;In French)
Width
Comparison between the behaviour of conventional or pretreated blends in large-scale coking ovens, 12:47027 (R;XE;In Italian)
COLLAGEN
Biosynthesis
Procollagen secretion and synthesis, 12:48452 (RA;US)
Receptors
Procollagen secretion and synthesis, 12:48452 (RA;US)
Secretion
Procollagen secretion and synthesis, 12:48452 (RA;US)
COLLECTIVE MODEL
Giant Resonance
Macroscopic description of the collective motion in fast rotating nuclei, 12:48933 (RA;SU;In Russian)
Hartree-Fock Method
Microscopic theory of dynamical subspace for large amplitude collective motion, 12:49035 (R;JP)
COLLEGES
See EDUCATIONAL FACILITIES
COLLIERIES
See COAL MINES
COLLISIONAL PLASMA
Energy
Measurement of parallel ion energy distribution function in PISCES plasma, 12:49104 (R;US)

COLLISIONS
For low-energy interactions involving photons, electrons, ions, atoms, and molecules; not for NUCLEAR REACTIONS; for elementary particles and radiations see also INTERACTIONS.
See also ELECTRON COLLISIONS
ION COLLISIONS
POSITRON COLLISIONS
Cross Sections
Ion-dipolar molecule rate coefficients, 12:48698 (R;GB)
Lippmann-Schwinger Equation
Theory of half-collision cross sections, 12:48700 (R;US)
COLOGNE SPIRITS
See ETHANOL
COLOR MODEL
Nolen-Schiffer Anomaly
Nuclear binding and quark confinement, 12:48953 (R;FR)
COLORADO
Calderas
Deposits of the Creede Caldera, Colorado, 12:48535 (R;US)
Petroleum Deposits
Significance of drilling and coring-induced fractures in Mesaverde core, northwestern Colorado, 12:47128 (J;US)
Shales
Submarine debris-flow, slump-block, and turbidite deposits in Mancos Shale (Cretaceous) of northwestern Colorado, 12:47131 (J;US)
COLORIMETRY
See ABSORPTION SPECTROSCOPY
COLUMBIA RIVER
Ambient Temperature
Columbia River Statistical Update Model, Version 4.0 (COLSTAT4): Background documentation and user's guide, 12:48442 (R;US)
Flow Rate
Columbia River Statistical Update Model, Version 4.0 (COLSTAT4): Background documentation and user's guide, 12:48442 (R;US)
COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS
COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Design
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)
Efficiency
Properties of gasturbines available in the market in combined production of electricity and heat, 12:47347 (R;FI;In Finnish)
Flue Gas
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)
Power Generation
Properties of gasturbines available in the market in combined production of electricity and heat, 12:47347 (R;FI;In Finnish)
Thermal Efficiency
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
Additives
Recycling of rest products from SO/sb 2/-separation in low NO/sub (x)/ burners , 12:47061 (R;SE;In Swedish)
Emission
Biogas originating from the waste collected to the Vuosaari dumping site, 12:47261 (R;FI;In Finnish)
Energy Conservation
Oxygen enriched combustion system performance study: Phase 1, Interim/final report: Volume 1, Technical and economic analysis, 12:48153 (R;US)
COMBUSTION KINETICS
Differential Equations
Decoupled direct method for sensitivity analysis in combustion kinetics. Final report, 12:48088 (R;US)
Fuel-Air Ratio
Two-dimensional modeling of fossil-fueled power plant behavior when using CO_2-O_2 or CO_2-H_2O-O_2 mixtures, instead of air, to support combustion, 12:47054 (R;US)
Research Programs
Sandia Combustion Research Program: Annual report, 1986, 12:48089 (R;US)
COMBUSTION PRODUCTS
Air Pollution
Evaluation of combustion processes for destruction of liquid organic wastes, GA Technologies, Incorporated, 12:48347 (R;US)
Chemical Bonds
Thermally initiated carbon-carbon bond-cleavage reactions occurring during coal gasification. Annual report, April 1986-March 1987, 12:47031 (R;US)
Environmental Impacts
Residues from the combustion of waste. Chemical and physical properties, 12:48406 (R;SE;In Swedish)
Toxicity
Chemical characterization of fossil fuel combustion wastes: Final report, 12:47055 (R;US)
COMBUSTORS
See also CYCLONE COMBUSTORS
FLUIDIZED-BED COMBUSTORS
PULSE COMBUSTORS
Fuels
Coal-water slurry (CWS) dispenser: Final report, 12:47099 (R;US)
Technology Assessment
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
COMETS
Motion
Cometary cloud in the solar system and the Resibois—Prigogine singular invariants of motion, 12:48688 (J;US)
COMMERCIAL BUILDINGS
See also SHOPPING CENTERS
Air Source Heat Pumps
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Cooling
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Energy Conservation
What works: Documenting the results of energy conservation in buildings, 12:47665 (B;US)
Energy Management
Energy conservation and the provision of optimum-temperature conditions for intensive livestock. Technical report series, 12:47702 (R;AU)
Fuel Cell Power Plants
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Volume 1. Topical report, 1983-1985, 12:47623 (R;US)
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Volume 2. Topical report, 1983-1985, 12:47624 (R;US)
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Executive Summary. Topical report, 1983-1985, 12:47625 (R;US)
Heating
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
COMMERCIAL SECTOR
Econometrics
Models of commercial sector equipment and fuel decisions for the COMMEND code: Framework design and data development plan: Final report, 12:47605 (R;US)

Energy Demand
Models of commercial sector equipment and fuel decisions for the COMMEND code: Framework design and data development plan: Final report, 12:47605 (R;US)

COMMUNICATIONS
Alarm Systems
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)
Expert Systems
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)

COMMUNITIES
District Heating
Cooperation in the energy field between industry and population centers, 12:47697 (R;FI;In Finnish)
Waste Heat Utilization
Cooperation in the energy field between industry and population centers, 12:47697 (R;FI;In Finnish)

COMPACT IGNITION TOKAMAK
A Tokamak proposed as a next-step after TFTR, i.e., for extensive ignited-core studies.
Feasibility study of an infrared interferometer/polarimeter system for CIT [Compact Ignition Tokamak], 12:49057 (R;US)
Comparative Evaluations
Relative merits of size, field, and current on ignited tokamak performance: A comparison of "CITs" and "Super-JETs", 12:49138 (R;US)
Computer-Aided Design
System studies of compact ignition tokamaks, 12:49137 (R;US)
Coordinated Research Programs
Planning for US ion cyclotron heating research relevant to the Compact Ignition Tokamak and Alcator C-Mod, 12:49139 (R;US)
Experiment Planning
Planning for US ion cyclotron heating research relevant to the Compact Ignition Tokamak and Alcator C-Mod, 12:49139 (R;US)

COMPENSATION (WORKMENS)
See WORKMENS COMPENSATION

COMPLEXES
See also GALLIUM COMPLEXES
PHOSPHORUS COMPLEXES
Stability
Connections between physicochemical properties and biokinetics of tumoraffine M-ligand complexes, 12:48510 (RA;DD;In German)

COMPOSITE MATERIALS
See also SUPERCONDUCTING COMPOSITES
Corrosion
Corrosion behavior of metal-matrix composites. Final report, June 1985-June 1986, 12:47882 (R;US)
Etching
Gas contrasting of multiphase and composite materials, 12:48138 (R;DE;In German)
Fabrication
Discontinuous reinforced MMC (metal-matrix composite) by improved sonic distribution of SiC into molten aluminum. Technical report (Final), 28 June 1985-28 February 1987, 12:47883 (R;US)
Method to produce titanium aluminide metal-matrix composite articles, 12:47929 (P;US)
Processing and properties of SiC/Nicalon composites, 12:47857 (R;US)
Fracture Properties
Diffraction moire: The dynamic regime, 12:47897 (R;US)
Method for dynamic fracture initiation testing of ceramics, 12:47854 (R;US)
Interferometry
Diffraction moire: The dynamic regime, 12:47897 (R;US)
Matrix Materials
Method to produce titanium aluminide metal-matrix composite articles, 12:47929 (P;US)
Thermodynamic Properties
Development of alumina - and mullite - SiC whisker composites: High temperature properties, 12:47931 (BA;US)

COMPOSITE MODELS
See also QUARK MODEL
Mass
Relation between the masses of the first and second generations of quarks in a minimal composite model, 12:48809 (R;JP)
Square-root sum rule for quark and lepton masses in a minimal composite model, 12:48810 (R;JP)
Quarks
Present status of composite models in particle physics. Minimal composite model of 'elementary' particles and fields, 12:48805 (R;JP)
Relation between the masses of the first and second generations of quarks in a minimal composite model, 12:48809 (R;JP)
Sum Rules
Square-root sum rule for quark and lepton masses in a minimal composite model, 12:48810 (R;JP)
Supersymmetry
Dynamical aspects of supersymmetric composite models of quarks and leptons, 12:48807 (R;JP)
Repetition of the quark-lepton states in a supersymmetric composite model with complementarity, 12:48806 (R;JP)

COMPOUNDS (INORGANIC)
See INORGANIC COMPOUNDS

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSED AIR ENERGY STORAGE
Reservoir Rock
Basic geology, 12:47552 (RA;US)

COMPRESSED AIR STORAGE POWER PLANTS
Aquifers
Assessment of oxygen depletion by inorganic constituents at the Pittsfield, Illinois compressed air energy storage site, 12:47559 (RA;US)
Evaluation of microbiological depletion of oxygen in the Pittsfield, Illinois CAES site, 12:47560 (RA;US)
Construction
Development cost and schedule experience, 12:47557 (RA;US)
Cost Estimation
Development cost and schedule experience, 12:47557 (RA;US)
Energy Storage
CAES development in aquifer porous media, 12:47554 (RA;US)
CAES development in gas-bearing porous media, 12:47555 (RA;US)
Feasibility Studies
Issues requiring resolution for CAES in porous media, 12:47562 (RA;US)
Operation
Field test of compressed air energy storage within an aquifer at Pittsfield, Illinois, 12:47558 (RA;US)
Research Programs
ANR Storage Company, 12:47561 (RA;US)
Site Selection
CAES development in aquifer porous media, 12:47554 (RA;US)
CAES development in gas-bearing porous media, 12:47555 (RA;US)
CAES siting potential in the United States, 12:47553 (RA;US)
Field test of compressed air energy storage within an aquifer at Pittsfield, Illinois, 12:47558 (RA;US)
Turbomachinery
CAES Turbomachinery observations, 12:47556 (RA;US)

COMPRESSORS
Evaluation
Evaluation and testing of trochoid refrigerating compressor. Final report, January-June 1986, 12:47651 (R;US)
Performance
Fairchild 7B compressor model, 12:47195 (R;US)

COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY

COMPUTER ARCHITECTURE
Automation recognition of tracking of objects. Final report, 1 January 1985-31 December 1986, 12:49168 (R;US)
Two-dimensional signal processing and storage and theory and applications of electromagnetic measurements. Annual report, 1 January-31 February 1986, 12:49165 (R;US)

Security
Layering central authentication on the interactive services of an existing homogeneous distributed system, 12:49219 (R;US)

COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also D CODES
M CODES
P CODES
S CODES
T CODES
W CODES
Analytical investigation of critical MHD [magnetohydrodynamics] phenomena: Final report for the period 15 September 1980-31 August 1986, 12:47612 (R;US)

G Codes
Optimizing interpreter for multidimensional products in computational chemistry, 12:49181 (RA;US)

Mathematical Models
General order nodal transport methods in weighted diamond difference form, 12:49173 (R;US)

Sensitivity Analysis
Matrix-based approach to uncertainty and sensitivity analysis for fault trees, 12:47594 (J;US)

Transient Overpower Accidents
Matrix-based approach to uncertainty and sensitivity analysis for fault trees, 12:47594 (J;US)

Validation
Progress in analytical modeling of MHD [magnetohydrodynamics] power generators 2, 12:47616 (RA;US)
The STD/MHD [magnetohydrodynamics] codes: Comparison of analyses with experiments at AEDC/HPDE, [Arnold Engineering Development Center/High Performance Demonstration Experiment], Reynolds Metal Co., and Hercules, Inc., 12:47614 (RA;US)

COMPUTER GRAPHICS
Automation recognition of tracking of objects. Final report, 1 January 1985-31 December 1986, 12:49168 (R;US)
Computer technologies, 12:48101 (RA;US)

C Codes
The cell-coloring computer program user's manual: Version 1.0, 12:49184 (R;US)

G Codes
Subroutine package for histogram selective filling, 12:49183 (R;SU;In Russian)

S Codes
SPSSX and TELL-A-GRAF-languages, 12:49188 (RA;US)

T Codes
SPSSX and TELL-A-GRAF-languages, 12:49188 (RA;US)
TELL-A-GRAF and SPSXS languages, 12:49187 (RA;US)

COMPUTER LANGUAGES
See PROGRAMMING LANGUAGES

COMPUTER NETWORKS
Implementing and managing change: A guide for assessing information technology (Office automation), 12:49228 (R;US)

See COMPUTER CODES

COMPUTER-AIDED DESIGN
Computer technologies, 12:48101 (RA;US)
Dynamic systems and control, 12:48102 (RA;US)

COMPUTERIZED CONTROL SYSTEMS

Design
Automatic control of a hybrid vehicle, 12:47791 (RA;US)
Basic architecture and operation of the Personnel Safety and Interlocks System for MFTF-B, 12:49105 (RA;US)
Components of an integrated control and monitoring system, 12:47081 (R;XE;In German)
Simplifying control system modeling using data scanning techniques, 12:48103 (R;US)

Performance
Field evaluation of automatic horizon control of ranging drum shearers, 12:47087 (R;XE)

Performance Testing
Process control computer-assisted sub-centres, Part B, 12:47091 (R;XE;In German)

Technology Assessment
Computer-based monitoring and remote control of methane drainage systems, 12:47089 (R;XE)

COMPUTERIZED SIMULATION

Validation
Analytical investigation of critical MHD [magnetohydrodynamics] phenomena: Final report for the period 15 September 1980-31 August 1986, 12:47612 (R;US)

COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane

Energy
Equivalent photon energy in computed tomography, 12:48471 (RA;ZA)

CONCENTRATING COLLECTORS

Evaluation
An evaluation of the LEC-460 solar collector, 12:47314 (R;US)

Optical Properties
An evaluation of the LEC-460 solar collector, 12:47314 (R;US)

Solar Flux
An evaluation of the LEC-460 solar collector, 12:47314 (R;US)

CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.

Design
Mechanically stacked multijunction solar cells: An update on Sandia programs, 12:47302 (R;US)

CONCRETES

Aerosols
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)

Boreholes
Measured distribution of activation products, including tritium, in the biological shielding of the shutdown research reactor DIORIT, 12:47468 (R;CH;In German)

Chemical Reaction Kinetics
Fission product release from core-concrete melts, 12:47529 (RA;US)

Chemical Reactions
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)

Radioactive Effluents
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)

CONDENSED AROMATICS
See also ANTHRACENE
BENZOPYRENE
NAPHTHALENE

Configuration Interaction
Polarization propagator analysis of through-space spin-spin coupling constants: ^{19}F-^{19}F couplings, 12:49026 (RA;US)

Graphs
Stability of conjugated hydrocarbon ions, 12:47952 (RA;US)

Topology
Stability of conjugated hydrocarbon ions, 12:47952 (RA;US)

Valence
Stability of conjugated hydrocarbon ions, 12:47952 (RA;US)

CONNECTICUT RIVER BASIN

Anadromous Fishes
American shad (Alosa sapidissima) population characteristics in the Connecticut River basin in relation to recent fish passage developments, 12:48426 (RA;US)

CONNECTORS

Fabrication
Planarization of metal films for multilevel interconnects, 12:47850 (P;US)

Materials
Planarization of metal films for multilevel interconnects, 12:47850 (P;US)

CONSERVATION (ENERGY)
See ENERGY CONSERVATION

CONSERVATION (RESOURCE)
See RESOURCE CONSERVATION

CONSTRUCTION
Permits
[South Carolina Department of Health and Environmental Control] SCDHEC permit procedures "HOW" manual, 12:48411 (R;US)
CONTACT RADIOTHERAPY
See RADIOTHERAPY
CONTAINED EXPLOSIONS
Meetings
Fourth symposium on containment of underground nuclear explosions: Abstracts, 12:48303 (R;US)
CONTAINERS
See also CASKS
PRESSURE VESSELS
TANKS
Leaks
Investigations of leakage behaviour of big containers and devices, 12:48096 (R;DE;In German)
CONTAINMENT
See also CONTAINMENT SYSTEMS
Heating
Rates of chemical heating and atmospheric heating during core debris expulsion from a pressurized vessel, 12:47530 (RA;US)
Leaks
Investigations of leakage behaviour of big containers and devices, 12:48096 (R;DE;In German)
CONTAINMENT SYSTEMS
Design
Waste package performance assessment: Deterministic system model, program scope and specification, 12:47232 (R;US)
P Codes
Waste package performance assessment: Deterministic system model, program scope and specification, 12:47232 (R;US)
CONTENT ANALYSIS
See CHEMICAL ANALYSIS
CONTINENTAL CRUST
Drilling
International symposium on observation of the continental crust through drilling: Summary, 12:48545 (R;US)
CONTINENTAL SHELF
Leasing
The federal Outer Continental Shelf leasing program in northern California, 12:47135 (R;US)
Natural Gas Deposits
Barrow Arch transportation-systems impact analysis. Social and economic studies program technical report number 104. Final report, 12:47159 (R;US)
Beaufort Sea petroleum technology assessment. Social and economic studies program technical report number 112. Final report, 12:47160 (R;US)
Coastal oceanography of the northeastern Gulf of Alaska. Final report, 12:47126 (R;US)
Environmental impact statement. Proposed Norton Basin Sale 100. Volume 2, 12:47158 (R;US)
Final environmental impact statement. Proposed Norton Basin Sale 100. Volume 1, 12:47157 (R;US)
Offshore Drilling
Research to determine the accumulation of organic constituents and heavy metals from petroleum-impacted sediments by marine detritivores of the Alaskan Outer Continental Shelf. Final report, 12:47155 (R;US)
Suspended particulate matter distribution, transport, and physical characteristics in the North Aleutian Shelf and St. George Basin lease areas, 12:47156 (R;US)
Offshore Operations
Unimak Pass vessel analysis. Social and economic studies program technical report number 108. Final report, 12:47161 (R;US)
Petroleum Deposits
Barrow Arch transportation-systems impact analysis. Social and economic studies program technical report number 104. Final report, 12:47159 (R;US)
Beaufort Sea petroleum technology assessment. Social and economic studies program technical report number 112. Final report, 12:47160 (R;US)
Coastal oceanography of the northeastern Gulf of Alaska. Final report, 12:47126 (R;US)
Environmental impact statement. Proposed Norton Basin Sale 100. Volume 2, 12:47158 (R;US)
Final environmental impact statement. Proposed Norton Basin Sale 100. Volume 1, 12:47157 (R;US)
Monitoring oil-exploration activities in the Beaufort Sea. Social and economic studies program technical report Number 107. Final report, 12:47127 (R;US)
CONTROL (RADIOACTIVITY)
See RADIATION MONITORING
CONTROLLED TERMINOLOGY
See STANDARDIZED TERMINOLOGY
CONVERTERS (ANALOG-DIGITAL)
See ANALOG-TO-DIGITAL CONVERTERS
CONVERTERS (DIGITAL-ANALOG)
See DIGITAL-TO-ANALOG CONVERTERS
CONVEYORS
Alignment
Integrated system for automatic control of face alignment and advance, 12:47088 (R;XE)
Computerized Control Systems
Integrated system for automatic control of face alignment and advance, 12:47088 (R;XE)
COOK INLET
See GULF OF ALASKA
COOKING
See FOOD PROCESSING
COOLERS
See HEAT EXCHANGERS
COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS
COOLING SYSTEMS
See also REACTOR COOLING SYSTEMS
Failure Mode Analysis
Application of failure analysis techniques, 12:48139 (RA;US)
Gas Appliances
Technology status of components for gas-fired cooling systems. Topical report, July 1986-January 1987, 12:47650 (R;US)
COPPER
Catalytic Effects
Development and process evaluation of improved Fischer-Tropsch slurry catalysts: Quarterly technical progress report for the period 1 January to 31 March 1987, 12:47260 (R;US)
Electron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Electronic Structure
High-resolution photoemission study of the electronic structure of the noble-metal (111) surfaces, 12:47844 (J;US)
Failure Mode Analysis
Application of failure analysis techniques, 12:48139 (RA;US)
Joining
Low-pressure eutectic bonding of depleted uranium to copper, 12:47839 (R;US)
Oxygen 16 Reactions
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)
Physical Radiation Effects
About properties of point defects in metals, 12:47817 (R;FR)
Collapse of defect cascades to dislocation loops, 12:47851 (J;NL)
Point Defects
About properties of point defects in metals, 12:47817 (R;FR)
Positron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Proton Reactions
Production of deuterons and tritium nuclei with the 0.6-1.83 GeV/c momenta on Be, Al, Cu, Ta nuclei at the 119 deg angle by 10 GeV protons, 12:48872 (R;SU;In Russian)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Fatigue
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)

Microstructure
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Physical Radiation Effects
Collapse of defect cascades to dislocation loops, 12:47851 (J;NL)
Powder Metallurgy
Mechanical properties of Cu-Nb and Cu-Nb/sub 3/Sn superconductors, 12:47820 (R;DE;In German)
Tensile Properties
Tensile behavior of superplastic Al-Cu-Li-Zr alloy 2090 at cryogenic temperatures, 12:47826 (R;US)

COPPER BASE ALLOYS
See also TUNGSTEN BRONZE
Physical Radiation Effects
About properties of point defects in metals, 12:47817 (R;FR)
Point Defects
About properties of point defects in metals, 12:47817 (R;FR)

COPPER COMPLEXES
Chemical Reactions
Interaction between copper(II)-arginine complexes and HO_2/O_2^- radicals, a pulse radiolysis study, 12:48015 (J;US)

COPPER COMPOUNDS
See also COPPER HYDROXIDES
COPPER OXIDES
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)

COPPER HYDROXIDES
Binding Energy
OH-transition metal bonding, 12:47975 (RA;US)

COPPER OXIDES
Crystal Structure
Stability analysis of special-point ordering in the basal plane of YBa/sub 2/Cu/sub 3/O/sub 7-//sub δ/, 12:47865 (J;US)
Structural and superconducting properties of orthorhombic and tetragonal YBa/sub 2/Cu/sub 3/O/sub 7-//sub x/: The effect of oxygen stoichiometry and ordering on superconductivity, 12:47866 (J;US)
Structure-property relationships for RBa/sub 2/Cu/sub 3/O/sub x/ phases (R = Y, La, Nd, Er), 12:47855 (R;US)
Energy Gap
Photoemission search for the superconducting energy gap of high-T/sub c/YBa/sub 2/Cu/sub 3/O/sub 7, 12:47869 (J;US)
Fabrication
Shock-induced chemical synthesis of phases similar to the high temperature superconductor oxides ((La-Sr-Cu-O) and (Y-Ba-Cu-O)), 12:47862 (R;US)
Impurities
Effect of magnetic impurities on high-temperature superconductivity in La/sub 1.85/Sr/sub 0.15/CuO_4, 12:47867 (J;US)
Photoemission
Photoemission search for the superconducting energy gap of high-T/sub c/YBa/sub 2/Cu/sub 3/O/sub 7, 12:47869 (J;US)
Specific Heat
Specific heat of the high T/sub c/ superconductors $(La,M)_2CuO_4$ and $YBa_2Cu_3O_7$ in magnetic fields (M = Ca,Sr), 12:47859 (R;US)
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Superconductivity
Structural and superconducting properties of orthorhombic and tetragonal YBa/sub 2/Cu/sub 3/O/sub 7-//sub x/: The effect of oxygen stoichiometry and ordering on superconductivity, 12:47866 (J;US)
Thermal Expansion
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Transition Temperature
Effect of magnetic impurities on high-temperature superconductivity in La/sub 1.85/Sr/sub 0.15/CuO_4, 12:47867 (J;US)

CORALS
Isotope Ratio
Coral growth rings and the temporal history of nuclear $^{14}C/C$ and $^{90}Sr/Sr$ in the surface ocean: Final report, June 1, 1982-December 31, 1984, 12:48438 (R;US)

CORES (REACTOR)
See REACTOR CORES

CORIUM
Aerosols
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Chemical Reaction Kinetics
Fission product release from core-concrete melts, 12:47529 (RA;US)
Rates of chemical heating and atmospheric heating during core debris expulsion from a pressurized vessel, 12:47530 (RA;US)
Chemical Reactions
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Heat Transfer
In-pile experiments and analysis of the coolability of UO_2 debris in sodium, 12:47547 (J;US)
Radioactive Effluents
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)

CORONA DISCHARGES
Mathematical Models
The effects of corona on current surges induced on conducting lines by EMP [electromagnetic pulse]: A comparison of experiment data with results of analytic corona models, 12:47368 (R;US)

CORONA (SOLAR)
See SOLAR CORONA

COSMIC DUST
Grain Size
Infrared properties of dust grains derived from IRAS observations, 12:48591 (RA;US)
Heating
Simple two-component model for the far-infrared emission from galaxies, 12:48621 (RA;US)
Infrared Spectra
Infrared properties of dust grains derived from IRAS observations, 12:48591 (RA;US)
Luminosity
Shock heated dust in L1551: L(IR) greater than 20 solar luminosities, 12:48584 (RA;US)
Shock Heating
Shock heated dust in L1551: L(IR) greater than 20 solar luminosities, 12:48584 (RA;US)
Temperature Distribution
CO observations of nearby galaxies and the efficiency of star formation, 12:48598 (RA;US)
X-Ray Fluorescence Analysis
Stratospheric particles: Synchrotron x-ray fluorescence determination of trace element contents, 12:48551 (R;US)
X-Ray Spectra
Dust scattered halo in starburst galaxy M82?, 12:48641 (RA;US)

COSMIC GAMMA BURSTS
Catalogs
Second catalog of gamma-ray bursts - 1978-1980 localizations from the interplanetary network, 12:48689 (J;US)
Energy Spectra
Gamma ray transients, 12:48262 (RA;US)
Gamma Spectrometers
Gamma ray transients, 12:48262 (RA;US)

COSMIC GASES
Interactions
Cloud fluid models of gas dynamics and star formation in galaxies, 12:48636 (RA;US)
COSMIC NUCLEI
Prior to July , 1975 information was indexed to NUCLEI.
Abundance
Measurements of ultraheavy cosmic rays with HEAO-3, 12:48566 (RA;US)
Origin and propagation of galactic cosmic rays, 12:48567 (RA;US)
Energy Spectra
Origin and propagation of galactic cosmic rays, 12:48567 (RA;US)
Heavy Nuclei
Measurements of ultraheavy cosmic rays with HEAO-3, 12:48566 (RA;US)
Origin
Origin and propagation of galactic cosmic rays, 12:48567 (RA;US)
Particle Production
Measurements of ultraheavy cosmic rays with HEAO-3, 12:48566 (RA;US)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC PROTONS
Prior to July, 1975 information was indexed to PROTONS.
Antiprotons
Antiprotons in cosmic rays, 12:48565 (RA;US)
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
See also COSMIC NUCLEI
COSMIC PROTONS
Daily Variations
On a daily variation of cosmic ray flux in the stratosphere, 12:48692 (RA;SU;In Russian)
Neutron Monitors
Solar-Geophysical Data Number 513, May 1987. Part 1 (prompt reports). Data for April, March 1987 and late data, 12:48683 (R;US)
Stratosphere
On a daily variation of cosmic ray flux in the stratosphere, 12:48692 (RA;SU;In Russian)
COSMIC RADIO SOURCES
See also BL LACERTAE OBJECTS
H2 REGIONS
PULSARS
QUASARS
Spectra Unfolding
Comparison of three methods of restoration of cosmic radio source profiles, 12:48554 (RA;SU;In Russian)
COSMIC RAY FLUX
Variations
Cosmic rays in the heliosphere, 12:48564 (RA;US)
COSMIC X-RAY SOURCES
Background Radiation
Discrete x-ray sources and the x-ray background, 12:48570 (RA;US)
Energy Spectra
Cosmic X-ray background, 12:48571 (RA;US)
Reviews
Cosmic X-ray background, 12:48571 (RA;US)
X-Ray Spectra
X-ray astronomical spectroscopy, 12:48572 (RA;US)
COSMOLOGICAL MODELS
Mathematical Manifolds
Cosmological textures, 12:49052 (J;GB)
Texture
Cosmological textures, 12:49052 (J;GB)
Topological Mapping
Cosmological textures, 12:49052 (J;GB)
COSMOS
See UNIVERSE
COSO HOT SPRINGS
KGRA
Coso Monitoring Program. Summary report, October 1985-September 1986, 12:47326 (R;US)
COUNTERS (RADIATION)
See RADIATION DETECTORS
COW-MILKERS
See RADIOISOTOPE GENERATORS
CRABS
Life Cycle
Qualitative and quantitative changes in exoskeletal proteins synthesized throughout the molt cycle of the Bermuda land crab, 12:48462 (J;US)
CRANKING MODEL
Nuclear Deformation
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)
CRITICAL ASSEMBLIES
See ZERO POWER REACTORS
CRITICALITY
Calculation Methods
KENO V.a validation of fuel pin experiments, 12:47198 (R;US)
CRITICALITY ACCIDENTS

DEUTERIUM
Isotope Effects
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)
Natural Occurrence
Natural isotopic labelling in precipitation and initial formation of groundwater, 12:48420 (R;DE;In German)
Phase Stability
Ground-state phases of polarized deuterium species, 12:48742 (J;US)
Spin Orientation
Ground-state phases of polarized deuterium species, 12:48742 (J;US)

DEUTERIUM COMPOUNDS
Chemical Reactions
Dynamics of the reactions of CH_3i, CH_3^+, and CH^+ with acetylene, 12:48003 (J;US)
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Variation of alkylmethylviologen radical cation-water interactions in micelles and vesicles from ESEM spectroscopy: effect of alkyl chain length, 12:48001 (J;US)
Electron Transfer
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)
Excited States
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)
Radiolysis
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Solvation
Picosecond excited-state solvation dynamics of 9,9'-bianthryl in alcohol solutions, 12:48007 (J;US)
DEUTERIUM HYDRIDE
See HYDROGEN DEUTERIDE
DEUTERIUM IONS
Ion Sources
Volume produced H/sup -/, D/sup -/ ion source for proton accelerator and thermo-nuclear fusion research by sheet plasma, (2), 12:49079 (R;JP)
DEUTERIUM TARGET
Electron Reactions
Electroproduction of neutral pions on deuterons, 12:48824 (R;SU;In Russian)
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
Kaon Plus Reactions
Relative yields of the eta mesons produced by 10 GeV pions and kaons, 12:48751 (R;SU;In Russian)
Photonuclear Reactions
On a possibility of narrow dibaryon production in gamma-quanta scattering on nuclei, 12:48915 (RA;SU;In Russian)
Pion Minus Reactions
Dibaryon resonance 2.9 GeV in elastic backward π/sup -/d scattering, 12:48820 (R;SU)
Pion Plus Reactions
Relative yields of the eta mesons produced by 10 GeV pions and kaons, 12:48751 (R;SU;In Russian)
DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES
DEUTERON REACTIONS
Breakup Reactions
Deuteron inelastic scattering by electrons in rest, $d+e^- \rightarrow e^-+eta+p$, 12:48948 (R;SU;In Russian)
Coulomb Correction
Model for the nuclear effects of the d-t-muon fusing state, 12:48875 (R;US)
Nuclear Forces
Model for the nuclear effects of the d-t-muon fusing state, 12:48875 (R;US)
Nuclear Reaction Kinetics
On the mechanism of relativistic deuteron fragmentation on nuclei, 12:48947 (R;SU;In Russian)
Scattering
Three-body coupled-channel theory of scattering and breakup of light and heavy ions, 12:48871 (R;JP)
DEUTERON SOURCES
Operation
Operation in pulsed mode at RTNS-II, 12:48213 (R;US)
DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS
DEUTERONS
Form Factors
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
Multiquark systems and the lightest nucleus form factors, 12:48938 (RA;SU;In Russian)
Particle Production
Correlations of cumulative hadrons in hadron-nuclear interactions, 12:48761 (R;SU;In Russian)
Deuteron production and space-time characteristics of high-energy hadron-nucleus reactions, 12:48922 (R;SU)
Production of deuterons and tritium nuclei with the 0.6-1.83 GeV/c momenta on Be, Al, Cu, Ta nuclei at the 119 deg angle by 10 GeV protons, 12:48872 (R;SU;In Russian)
Quark Model
Multiquark systems and the lightest nucleus form factors, 12:48938 (RA;SU;In Russian)
DEVELOPING COUNTRIES
See also CZECHOSLOVAKIA

TOMOGRAPHY
Planning
[The MHD [magnetohydrodynamics] coal fired flow facility]: Quarterly technical progress report, April-June 1987, 12:47610 (R;US)
1,4-DIAMINOBUTANE
See PUTRESCINE
DIBARYON RESONANCES
Particle Production
Dibaryon resonance 2.9 GeV in elastic backward π/sup -/d scattering, 12:48820 (R;SU)
Photoproduction
On a possibility of narrow dibaryon production in gamma-quanta scattering on nuclei, 12:48915 (RA;SU;In Russian)
DICHLOROMETHANE
See METHYLENE CHLORIDE
DIELECTRIC MATERIALS
Laser Radiation
Radiation damage to dielectric mirrors, 12:47930 (BA;US)
Physical Radiation Effects
Radiation damage to dielectric mirrors, 12:47930 (BA;US)
Reflectivity
Radiation damage to dielectric mirrors, 12:47930 (BA;US)
DIELECTRIC TRACK DETECTORS
Rectangular Configuration
Calculation of solids angles for the elliptical source-rectangular detector system, 12:48265 (R;SU;In Russian)
DIELECTRICS
See DIELECTRIC MATERIALS
DIESEL ENGINES
Fabrication
Thick thermal barrier coatings, 12:47880 (BA;US)
Pistons
Piston ring friction and vehicle fuel economy: Final report, November 1, 1983-January 31, 1987, 12:47713 (R;US)
Thermal Insulation
Thick thermal barrier coatings, 12:47880 (BA;US)
Unlubricated sliding wear of ceramic materials, 12:47876 (BA;US)
Tribology
Piston ring friction and vehicle fuel economy: Final report, November 1, 1983-January 31, 1987, 12:47713 (R;US)
DIESEL FUELS
Mass Spectroscopy
Analysis of middle-distillate fuels by high-resolution field-ionization mass spectrometry. Annual report (Final), 1 June 1982-November 1986, 12:47139 (R;US)
Pathogenesis
Effect of 2,3,4-trimethylpentane on the ultrastructure of kidneys from normal versus castrated male rats, 12:48522 (R;US)

DIESEL OIL (FRACTION)
See DIESEL FUELS
DIFFERENTIAL EQUATIONS
See also NEUTRON DIFFUSION EQUATION
Analytical Solution
A collection of test problems for ordinary differential equation solvers which have provisions for rootfinding, 12:49209 (R;US)
Implementation and evaluation of several continuously imbedded methods of Sarafyan, 12:49210 (R;US)
Parallel methods for ordinary differential equations, 12:49178 (R;US)
R matrix: its relation to Titchmarsh-Weyl theory and its complex rotated analogue, 12:49015 (RA;US)
Numerical Solution
Numerical solution of partial differential equations on irregular grids, 12:49186 (R;US)
The development of ODE methods: A symbiosis between hardware and numerical analysis, 12:49179 (R;US)
R Matrix
R matrix: its relation to Titchmarsh-Weyl theory and its complex rotated analogue, 12:49015 (RA;US)
Research Programs
Computational methods and software for differential equations and their applications: Annual report, December 1, 1986-November 30, 1987, 12:49177 (R;US)
DIFFRACTION (NEUTRON)
See NEUTRON DIFFRACTION
DIGESTER GAS
See METHANE
DIGITAL-TO-ANALOG CONVERTERS
Calibration
21-bit digital-to-analog converter and its calibration technique, 12:48146 (R;SU;In Russian)
DIMETHYL KETONE
See ACETONE
DIODE TUBES
Design
Predicted radiation environment of the Saturn baseline diode, 12:48212 (R;US)
Radiation Transport
Predicted radiation environment of the Saturn baseline diode, 12:48212 (R;US)
DIPHENYLPHOSPHINE OXIDE

DISLOCATIONS
Physical Radiation Effects
Collapse of defect cascades to dislocation loops, 12:47851 (J;NL)
Research Programs
Energy changes in transforming solids: Final report, April 1, 1982 to November 30, 1986, 12:47804 (R;US)
DISPERSANTS (CHEMICAL)
See SURFACTANTS
DISPERSE SYSTEMS
See DISPERSIONS
DISPERSIONS
For the state of aggregation in materials; if related to wave phenomena see DISPERSION RELATIONS or OPTICAL DISPERSION.
Thermodynamic Properties
Nearly monodisperse fluids. I. Monte Carlo simulations of Lennard-Jones particles in a semigrand ensemble, 12:48740 (J;US)
DISPLACEMENT GAGES
Performance Testing
Study on the statistical accuracy of large-displacement pneumatic gages, 12:48287 (R;SU;In Russian)
DISPLAY DEVICES
Occupational Safety
Irradiation from video display terminals, 12:48534 (R;NO;In Norwegian)
DISPOSAL (WASTES)
See WASTE DISPOSAL
DISSOLVED MATERIALS
See SOLUTES
DISSOLVED OXYGEN
See OXYGEN
DISTRIBUTED DATA PROCESSING
ONR (Office of Naval Research) research in distributed reasoning and planning. Interim report, February 1985-February 1987, 12:49167 (R;US)
DISTRIBUTION FUNCTIONS
Measures of diversity based on fuzzy multinomial distributions, 12:49172 (R;US)
DISTRICT COOLING
Feasibility Studies
Aquifer thermal energy storage district cooling in downtown St. Paul, Minnesota: Feasibility study, 12:47709 (R;US)
DISTRICT HEATING
See also SOLAR DISTRICT HEATING
Cost
District heating economy based on true total costs, 12:47708 (R;SE;In Swedish)
Efficiency
District heating economy based on true total costs, 12:47708 (R;SE;In Swedish)
Heat Pumps
Natural gas driven heat pump in district heating, 12:47710 (R;FI;In Finnish)
Maintenance
Maintenance planning in district heating system, 12:47712 (R;SE;In Swedish)
DNA
Absorption Spectra
Orientation and linear dichroism characteristics of porphyrin-DNA complexes, 12:48453 (J;US)
Dichroism
Orientation and linear dichroism characteristics of porphyrin-DNA complexes, 12:48453 (J;US)
Strand Breaks
Radiation-induced DNA single-strand breaks in the intestinal mucosal cells of mice treated with the radioprotectors WR-2721 or 16-16 dimethyl prostaglandin E_2, 12:48514 (J;GB)
DOCUMENT RETRIEVAL
See INFORMATION RETRIEVAL
DOGS
Hematopoietic System
Growth of hemopoietic precursor cells (CFU-C) of adriamycin-treated or whole-body-irradiated dogs with or without bleomycin in vitro, 12:48497 (R;DE;In German)
DOMAIN STRUCTURE
Impurities
Effects of impurities on domain growth, 12:47899 (R;US)
Temperature Effects
Effects of impurities on domain growth, 12:47899 (R;US)
DOMESTIC WASTES

EXCIMER LASERS
(Prior to April, 1984 information was indexed to GAS LASERS and, if possible, the applicable excimer.)
See also KRYPTON FLUORIDE LASERS
New concept for scaling excimer-laser amplifiers. Technical report (Final), 1 October 1985-30 April 1987, 12:48113 (R;US)

EXERCISE
Biological Effects
Effect of vigorous short term exercise on the splenic platelet pool, 12:48490 (RA;ZA)

EXHAUST GASES
Carcinogen Screening
Chemical and toxicological characterization of residential oil burner emissions. II. Mutagenic, tumorigenic, and potential teratogenic activity, 12:47143 (J;US)
Mutagen Screening
Chemical and toxicological characterization of residential oil burner emissions. II. Mutagenic, tumorigenic, and potential teratogenic activity, 12:47143 (J;US)
Teratogen Screening
Chemical and toxicological characterization of residential oil burner emissions. II. Mutagenic, tumorigenic, and potential teratogenic activity, 12:47143 (J;US)

EXOSKELETON
Morphological Changes
Qualitative and quantitative changes in exoskeletal proteins synthesized throughout the molt cycle of the Bermuda land crab, 12:48462 (J;US)

EXOTIC ATOMS
See HADRONIC ATOMS

EXOTIC RESONANCES
Particle Production
Exotic (E_6) particles in $e^+ e^-$ annihilation, 12:48780 (R;US)
Exotic baryon resonances. Modern status. Possibilities to search and investigate, 12:48750 (R;SU)
Search for the exotic baryon resonances with isospin I=5/2 in the π/sup +/p -> pπ/sup +/π/sup +/π/sup -/ reaction at π/sup +/ meson momentum of 3.94 GeV/c, 12:48765 (R;SU;In Russian)

EXPERIMENTAL BREEDER REACTOR-2
See EBR-2 REACTOR
EXPERT SYSTEMS
Artificial Intelligence/Enemy Courses of Action (AI/ENCOA) user's manual. Final report, January 1984-February 1985, 12:47797 (R;US)
Expert systems and microwave communication systems alarms processing: A feasibility study, 12:47350 (R;US)
Data Covariances
Uncertainty methodologies used in expert systems: synthesis of approaches, 12:49198 (RA;US)
Design
Multi-expert expert systems, 12:49203 (RA;US)
Knowledge Base
Interactive system to generate primes and minimal covers from a set of production rules, 12:49201 (RA;US)
Problems of partial matching of facts in an expert system, 12:49197 (RA;US)
State estimation in finite stochastic decision trees, 12:49195 (RA;US)
Mathematical Logic
Incorporating "fuzzy" data and logical relations in the design of expert systems for nuclear reactors, 12:47439 (R;US)
Theory of usuality, 12:49205 (RA;US)
Programming
A useful by-product expert system, 12:47986 (R;US)
Uses
Design of a student record, 12:49202 (RA;US)
Substitutional pattern matching of clauses in a fuzzy expert system, 12:49196 (RA;US)
EXPLORATORY WELLS
Well Drilling
Exploration. Guidelines for drilling, 12:47162 (R;DK;In Danish and English)
EXPLOSIVE FRACTURING
Technology Utilization
Mechanization of shotfiring drivage - II, 12:47080 (R;XE;In German)
EXPONENTIAL PILES

FLUE GAS
Cleaning
Characterization and fundamental studies on CuO sorbent materials to determine attrition mechanisms on substrate gamma alumina: Technical progress report number 2 for the period December 23, 1986 to March 23, 1987, 12:47356 (R;US)
Denitrification
Removal of nitrogen oxides from flue gases, 12:48323 (R;FI;In Finnish)
Desulfurization
Retrofit FGD [Flue Gas Desulfurization] cost estimating guidelines: Computer user's manual, 12:47359 (R;US)
Energy Recovery
Investigation concerning organic micro-pollutants from waste combustion, 12:47705 (R;SE;In Swedish)
Filtration
Alkali measurement in PFBC and its control by a granular bed of activated bauxite, 12:47066 (BA;US)
Heat Recovery
Heat recovery from flue gases at a bark fired boiler using a steam producing heat pump, 12:47711 (R;SE;In Swedish)
Planning
Flue gas condensation - state-of-the-art and research necessities, 12:48375 (R;SE;In Swedish)
Research Programs
Flue gas condensation - state-of-the-art and research necessities, 12:48375 (R;SE;In Swedish)
Sampling
Methods of sampling and analysis for sulphur dioxide, oxides of nitrogen and particulate matter in the exhaust gases of large combustion plants, 12:48321 (R;XE)
FLUID FLOW

UNSTEADY FLOW
VORTEX FLOW
Dissipation Factor
FLIP [fluid-implicit-particle]: A low-dissipation, particle-in-cell method for fluid flow, 12:48739 (R;US)
Equations of Motion
The evolution of HOBO, 12:48736 (R;US)
FLUID MECHANICS
See also HYDRAULICS
Forecasting
Predicted strength and influence of MHD [magnetohydrodynamics]-induced secondary flows in recent experiments, 12:47618 (RA;US)
Mathematical Models
Modelling of circulating fluidised bed combustion systems, 12:48157 (R;SE)
Reviews
Annual review of numerical fluid mechanics and heat transfer. Volume 1, 12:48133 (B;US)
FLUIDIZED BED
See FLUIDIZED BEDS
FLUIDIZED BEDS
Dynamics
Fluidized bed sensor signals analysed by means of noise technique, 12:48156 (R;SE)
Fluid Mechanics
Some aspects of the fluid dynamic behaviour of fast fluidised beds, 12:48131 (R;SE)
Gasification
Gasification by means of a circulating fluidized bed for oil substitution in lime kilns - construction and operation of a pilot plant, 12:48158 (R;SE;In Swedish)
Multivariate Analysis
Determination of causalities between the variables by means of multivariate analysis, 12:48155 (R;SE;In Swedish)
FLUIDIZED-BED COMBUSTION
Comparative Evaluations
Modelling of circulating fluidised bed combustion systems, 12:48157 (R;SE)
Emission
Removal of nitrogen oxides from flue gases, 12:48323 (R;FI;In Finnish)
Heat Transfer
Modelling of circulating fluidised bed combustion systems, 12:48157 (R;SE)
Research Programs
Development of pressurized fluidized bed combustion. Final report, 12:47111 (R;FI;In Finnish)
Reviews
Development of pressurized fluidized bed combustion. Final report, 12:47111 (R;FI;In Finnish)
Technology Assessment
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
FLUIDIZED-BED COMBUSTORS
Air Heaters
Materials for FBC air heater applications, 12:48160 (BA;US)
Combustion Control
An experimental study of pulsed fluidized beds, 12:48159 (BA;US)
Computerized Simulation
Erosion calculations in a two-dimensional fluidized bed, 12:47114 (BA;US)
Demonstration Plants
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)
Design
Development of pressurized fluidized bed combustion. Final report, 12:47111 (R;FI;In Finnish)
Emission
Alkali measurement in PFBC and its control by a granular bed of activated bauxite, 12:47066 (BA;US)
An experimental study of pulsed fluidized beds, 12:48159 (BA;US)
Influence of ammonia and hydrogen peroxide addition on NOsub(x) emissions in the flue gas channel of a 16 MW coal fired fluidised bed combustor, 12:47361 (R;SE)
Erosion
Erosion calculations in a two-dimensional fluidized bed, 12:47114 (BA;US)
F Codes
Erosion calculations in a two-dimensional fluidized bed, 12:47114 (BA;US)
Flow Models
An experimental study of pulsed fluidized beds, 12:48159 (BA;US)
Materials Testing
Fluidized bed materials. Stage 5, final report, 12:48143 (R;SE;In Swedish and English)
Mineral Wastes
Leaching studies of solid wastes generated from fluidized bed combustion of low-rank western coals, 12:47065 (BA;US)
Pollution Abatement
Influence of ammonia and hydrogen peroxide addition on NOsub(x) emissions in the flue gas channel of a 16 MW coal fired fluidised bed combustor, 12:47361 (R;SE)
Research Programs
Pressurized fluidized bed combustion. A literature study, 12:47107 (R;FI;In Finnish)
Solid Wastes
Atmospheric fluidized-bed combustion waste utilization in cement and sulfuric acid: Preliminary feasibility study, 12:47112 (R;US)
FLUIDS
Not for BODY FLUIDS.

LITHIUM FLUORIDES
MAGNESIUM FLUORIDES
SODIUM FLUORIDES
Physical Radiation Effects
Behavior of fluoride glass optical fibers under gamma irradiation, 12:47889 (R;FR;In French)

FLUORINATED ALIPHATIC HYDROCARBONS
See also METHYL FLUORIDE
Interatomic Forces
Ab initio calculations of through-space nuclear spin-spin coupling constants with the IPPP method, 12:47977 (RA;US)
Molecular Structure
Rotational barriers. 1. 1,2-dihaloethanes, 12:48012 (J;US)
Rotational States
Rotational barriers. 1. 1,2-dihaloethanes, 12:48012 (J;US)
Vapor Pressure
Vapor pressure isotope effects in liquid methylene difluoride, 12:48005 (J;US)

FLUORINATED AROMATIC HYDROCARBONS
Configuration Interaction
Polarization propagator analysis of through-space spin-spin coupling constants: ^{19}F-^{19}F couplings, 12:49026 (RA;US)

FLUORINE
Chemical Reactions
Dynamics calculations of kinetic isotope effects for the reactions of muonium atoms with F_2 and Cl_2, 12:47970 (RA;US)
J-J Coupling
Ab initio calculations of through-space nuclear spin-spin coupling constants with the IPPP method, 12:47977 (RA;US)

FLUORINE 17
Radiochemistry
New techniques for positron emission tomography in the study of human neurological disorders for the period June 15, 1987 through December 14, 1987, 12:48465 (R;US)

FLUORINE 18
Hot Atom Chemistry
Synthesis of no-carrier-added (NCA) [18F]fluoroalkyl halides and their application in the syntheses of [^{18}F]fluoroalkyl derivatives of neurotransmitter receptor active compounds, 12:48083 (J;GB)
Radiochemistry
Application of the nucleophilic substitution reactions to the synthesis of no-carrier-added (NCA) ^{18}F-labeled radioligands, 12:48085 (J;GB)
New techniques for positron emission tomography in the study of human neurological disorders for the period June 15, 1987 through December 14, 1987, 12:48465 (R;US)
Radiolytic self-decomposition of a high specific activity positron emitting radiotracer, [^{18}F]-N-methylspiroperidol, 12:48086 (J;GB)

FLUORINE 19
Interatomic Distances
Polarization propagator analysis of through-space spin-spin coupling constants: ^{19}F-^{19}F couplings, 12:49026 (RA;US)
J-J Coupling
Polarization propagator analysis of through-space spin-spin coupling constants: ^{19}F-^{19}F couplings, 12:49026 (RA;US)
Nuclear Magnetic Resonance
Multiphoton processes in a solid in a doubly rotating system by NMR, 12:48025 (RA;US)

FLUORINE 19 REACTIONS
Cross Sections
Measurement of /sup 19/F nucleus interaction at 4 GeV/c per nucleon, 12:48870 (RA;SU;In Russian)

FLUORINE COMPOUNDS
See also FLUORIDES
Chemical Reactions
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Formation Heat
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
Ionization Potential
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
Radiolysis
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)

Origin of the 40-120 micron emission of galaxy disks: A comparison with H-alpha fluxes, 12:48594 (RA;US)
Carbon Monoxide
Detection of CO (J=1-0) in the dwarf elliptical galaxy NGC 185, 12:48622 (RA;US)
Classification
Spectral classification of emission-line galaxies, 12:48680 (RA;US)
Color
Modelling the IRAS colors of galaxies, 12:48620 (RA;US)
Star formation rates as a function of galaxy mass, 12:48615 (RA;US)

Cosmic Dust
Dust scattered halo in starburst galaxy M82?, 12:48641 (RA;US)
IRAS observations of irregular galaxies, 12:48606 (RA;US)
Cosmic Gases
Cloud fluid models of gas dynamics and star formation in galaxies, 12:48636 (RA;US)
History of gas in sprial galaxies, 12:48625 (RA;US)
Structure and kinematics of the molecular spiral arms in M51, 12:48619 (RA;US)
Cosmological Models
Modelling the IRAS colors of galaxies, 12:48620 (RA;US)
Models for infrared emission from IRAS galaxies, 12:48593 (RA;US)
Simple two-component model for the far-infrared emission from galaxies, 12:48621 (RA;US)
Star formation and spiral structure in M81, 12:48601 (RA;US)
Emission Spectra
Carbon monoxide emission from small galaxies, 12:48610 (RA;US)
CO observations of galaxies with the Nobeyama 45-M telescope, 12:48597 (RA;US)
CO observations of nearby galaxies and the efficiency of star formation, 12:48598 (RA;US)
Efficient star formation in the bright bar of M83, 12:48617 (RA;US)
Erratum: IRAS observations of irregular galaxies, 12:48607 (RA;US)
Global properties of the nearby spiral M101, 12:48616 (RA;US)
Initial mass function in HII galaxies, 12:48639 (RA;US)
IUE observations of luminous blue star associations in irregular galaxies, 12:48608 (RA;US)
Simple two-component model for the far-infrared emission from galaxies, 12:48621 (RA;US)
Spectral classification of emission-line galaxies, 12:48680 (RA;US)
Star forming regions in gas-rich SO galaxies, 12:48623 (RA;US)
Structure and kinematics of the molecular spiral arms in M51, 12:48619 (RA;US)
VLA continuum observations of barred spiral galaxies, 12:48640 (RA;US)
Far Infrared Radiation
Characteristics of UGC galaxies detected by IRAS, 12:48611 (RA;US)
Extragalactic OH megamasers in strong IRAS sources, 12:48660 (RA;US)
Extremely Luminous Far-infrared Sources (ELFS), 12:48630 (RA;US)
Far-infrared activity and starburst galaxies, 12:48644 (RA;US)
IRAS observations of starburst galaxies, 12:48645 (RA;US)
Luminosity function of the brightest galaxies in the IRAS survey, 12:48648 (RA;US)
Origin of the 40-120 micron emission of galaxy disks: A comparison with H-alpha fluxes, 12:48594 (RA;US)
Radio continuum, far infrared and star formation, 12:48659 (RA;US)
Radio-far infrared correlation: Spiral and blue compact dwarf galaxies opposed, 12:48658 (RA;US)
Starburst-driven superwinds from infrared galaxies, 12:48637 (RA;US)
Very deep IRAS survey at l(II) = 97 deg, b(II) = +30 deg, 12:48651 (RA;US)
VLA observations of a sample of galaxies with high far-infrared luminosities, 12:48649 (RA;US)
Gravitational Interactions
Frequency of enhanced star formation in interacting and isolated galaxies, 12:48633 (RA;US)
H1 Regions
Azimuthal and radial distributions of HI and H2 in NGC 6946, 12:48642 (RA;US)
H2 Regions
Azimuthal and radial distributions of HI and H2 in NGC 6946, 12:48642 (RA;US)
Initial mass function in HII galaxies, 12:48639 (RA;US)
Neutral hydrogen and star formation in irregular galaxies, 12:48609 (RA;US)
Star forming regions in gas-rich SO galaxies, 12:48623 (RA;US)
Hydrogen
Large scale dissociation of molecular gas in the sprial arms of M51, 12:48618 (RA;US)
Neutral hydrogen and star formation in irregular galaxies, 12:48609 (RA;US)
Infrared Radiation
Infrared morphology of galactic centers, 12:48643 (RA;US)
Models for infrared emission from IRAS galaxies, 12:48593 (RA;US)
Nuclear infrared emission and the colors of IRAS galaxies, 12:48663 (RA;US)
Starburst galaxies, 12:48626 (RA;US)
Systematic identification of IRAS point sources, 12:48650 (RA;US)
Ultraluminous infrared galaxies, 12:48634 (RA;US)
Infrared Spectra
Evidence for extended IR emission in NGC2798 and NGC6240, 12:48674 (RA;US)
Extragalactic infrared spectroscopy, 12:48635 (RA;US)
Infrared spectroscopy of star formation in galaxies, 12:48627 (RA;US)
IRAS observations of irregular galaxies, 12:48606 (RA;US)
Near-infrared study of the luminous merging galaxies NGC 2623 and ARP 148, 12:48646 (RA;US)
Properties of the unusual galaxy PSC 09104+4109, 12:48653 (RA;US)
Stellar bars and the spatial distribution of infrared luminosity, 12:48600 (RA;US)
Submm observations of IRAS galaxies, 12:48599 (RA;US)
Using SIRTF to study extragalactic star formation, 12:48285 (RA;US)
Luminosity
Correlation between far-IR and radio continuum emission from spiral galaxies, 12:48656 (RA;US)
Erratum: IRAS observations of irregular galaxies, 12:48607 (RA;US)
Extremely Luminous Far-infrared Sources (ELFS), 12:48630 (RA;US)
Frequency of enhanced star formation in interacting and isolated galaxies, 12:48633 (RA;US)
Induced star formation in interacting galaxies, 12:48632 (RA;US)
Infrared spectroscopy of star formation in galaxies, 12:48627 (RA;US)
Luminosity function of the brightest galaxies in the IRAS survey, 12:48648 (RA;US)
Models for infrared emission from IRAS galaxies, 12:48593 (RA;US)
Optical and IR luminosity functions of IRAS galaxies, 12:48655 (RA;US)
Properties of highly luminous IRAS galaxies, 12:48665 (RA;US)
Starburst galaxies, 12:48626 (RA;US)
Ultraluminous infrared galaxies, 12:48634 (RA;US)
Mapping
Infrared morphology of galactic centers, 12:48643 (RA;US)
Maps
Very deep IRAS survey at l(II) = 97 deg, b(II) = +30 deg, 12:48651 (RA;US)
Mass
Star formation rates as a function of galaxy mass, 12:48615 (RA;US)
Mass Distribution
Initial mass function in HII galaxies, 12:48639 (RA;US)
Meetings
Star formation in galaxies, 12:48574 (R;US)
Morphology
Morphology of luminous IRAS galaxies: summary talk, 12:48682 (RA;US)
Near Infrared Radiation
Ground-based follow up of IRAS galaxies, 12:48662 (RA;US)
Near-infrared observations of IRAS minisurvey galaxies, 12:48661 (RA;US)

Point Sources
What are cirrus point sources?, 12:48652 (RA;US)
Radiowave Radiation
Extragalactic OH megamasers in strong IRAS sources, 12:48660 (RA;US)
Ground-based follow up of IRAS galaxies, 12:48662 (RA;US)
Nuclear star formation on 100 parsec scales: 10″ resolution radio continuum, HI and CO observations, 12:48629 (RA;US)
Radio continuum, far infrared and star formation, 12:48659 (RA;US)
Radio-far infrared correlation: Spiral and blue compact dwarf galaxies opposed, 12:48658 (RA;US)
Starburst galaxies, 12:48626 (RA;US)
VLA observations of a sample of galaxies with high far-infrared luminosities, 12:48649 (RA;US)
Red Shift
Nuclear infrared emission and the colors of IRAS galaxies, 12:48663 (RA;US)
Properties of highly luminous IRAS galaxies, 12:48665 (RA;US)
Redshift survey of IRAS galaxies, 12:48654 (RA;US)
Spectra
What are cirrus point sources?, 12:48652 (RA;US)
Star Evolution
Carbon monoxide emission from small galaxies, 12:48610 (RA;US)
Cloud fluid models of gas dynamics and star formation in galaxies, 12:48636 (RA;US)
CO observations of galaxies with the Nobeyama 45-M telescope, 12:48597 (RA;US)
CO observations of nearby galaxies and the efficiency of star formation, 12:48598 (RA;US)
Correlation between far-IR and radio continuum emission from spiral galaxies, 12:48656 (RA;US)
Detection of CO (J=1-0) in the dwarf elliptical galaxy NGC 185, 12:48622 (RA;US)
Efficient star formation in the bright bar of M83, 12:48617 (RA;US)
Enhanced star formation: the importance of bars in spiral galaxies, 12:48664 (RA;US)
Extremely Luminous Far-infrared Sources (ELFS), 12:48630 (RA;US)
Far-infrared activity and starburst galaxies, 12:48644 (RA;US)
Frequency of enhanced star formation in interacting and isolated galaxies, 12:48633 (RA;US)
High mass star formation in the galaxy, 12:48575 (RA;US)
History of gas in sprial galaxies, 12:48625 (RA;US)
Induced star formation in interacting galaxies, 12:48632 (RA;US)
Infrared spectroscopy of star formation in galaxies, 12:48627 (RA;US)
IRAS observations of irregular galaxies, 12:48606 (RA;US)
IUE observations of luminous blue star associations in irregular galaxies, 12:48608 (RA;US)
Large scale dissociation of molecular gas in the sprial arms of M51, 12:48618 (RA;US)
Measuring star formation rates in blue galaxies, 12:48596 (RA;US)
Neutral hydrogen and star formation in irregular galaxies, 12:48609 (RA;US)
Nuclear star formation on 100 parsec scales: 10″ resolution radio continuum, HI and CO observations, 12:48629 (RA;US)
Origin of the 40-120 micron emission of galaxy disks: A comparison with H-alpha fluxes, 12:48594 (RA;US)
Radio continuum, far infrared and star formation, 12:48659 (RA;US)
Simple two-component model for the far-infrared emission from galaxies, 12:48621 (RA;US)
Star formation in galaxies, 12:48574 (R;US)
Star formation and spiral structure in M81, 12:48601 (RA;US)
Star formation rates as a function of galaxy mass, 12:48615 (RA;US)
Star forming regions in gas-rich SO galaxies, 12:48623 (RA;US)
Submm observations of IRAS galaxies, 12:48599 (RA;US)
Summary of symposium: low luminosity sources, 12:48681 (RA;US)
Ultraluminous infrared galaxies, 12:48634 (RA;US)
VLA observations of a sample of galaxies with high far-infrared luminosities, 12:48649 (RA;US)
Stellar Winds
Starburst-driven superwinds from infrared galaxies, 12:48637 (RA;US)
Supernovae
Starburst-driven superwinds from infrared galaxies, 12:48637 (RA;US)
Visible Radiation
Extragalactic OH megamasers in strong IRAS sources, 12:48660 (RA;US)
Ground-based follow up of IRAS galaxies, 12:48662 (RA;US)
X Radiation
Starburst galaxies, 12:48626 (RA;US)
GALAXY CLUSTERS
Cosmic Gases
Molecular gas and star formation in HI-deficient Virgo cluster galaxies, 12:48614 (RA;US)
Emission Spectra
Molecular gas and star formation in HI-deficient Virgo cluster galaxies, 12:48614 (RA;US)
Infrared Spectra
Far-infrared properties of cluster galaxies, 12:48612 (RA;US)
Star Evolution
Molecular gas and star formation in HI-deficient Virgo cluster galaxies, 12:48614 (RA;US)
Present star formation in sprials of the Virgo cluster, 12:48613 (RA;US)
GALAXY NUCLEI
Central part of galaxies.
Cosmic Gases
Molecular gas in the starburt nucleus of M82, 12:48628 (RA;US)
Star formation and dynamics in starburst nuclei, 12:48631 (RA;US)
Infrared Spectra
Infrared-ultraviolet spectra of active galactic nuclei, 12:48678 (RA;US)
Star formation in the merging Galaxy NGC3256, 12:48647 (RA;US)
Luminosity
Spatial deconvolution of IRAS galaxies at 60 UM, 12:48668 (RA;US)
Star Evolution
High mass star formation in the galaxy, 12:48575 (RA;US)
Relation between star formation and active nuclei, 12:48666 (RA;US)
Star formation and dynamics in starburst nuclei, 12:48631 (RA;US)
Star formation around active galactic nuclei, 12:48669 (RA;US)
Ultraviolet Spectra
Infrared-ultraviolet spectra of active galactic nuclei, 12:48678 (RA;US)
GALLIUM ARSENIDES
Crystal Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Diamagnetism
Behavior of carriers in quantum wells in GaAs-A ell/sub x/Ga/sub 1-x/As superlattices under in-plane magnetic fields, 12:47895 (RA;US)
Dielectric Properties
Dielectric response to a donor ion in a Ga/sub 1-x/Al/sub x/As - GaAs - Ga/sub 1-x/Al/sub x/As quantum well of finite depth, 12:47962 (RA;US)
Dusts
Preliminary survey report: control technology for gallium arsenide processing at Morgan Semiconductor Division, Garland, Texas, 12:48352 (R;US)
Preliminary survey report: control technology for gallium arsenide processing at Hewlett Packard, San Jose, California, 12:48353 (R;US)

Electronic Structure
Determination of band offsets in AlGaAs/GaAs and InGaAs/GaAs multiple quantum wells, 12:47925 (J;US)
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Energy Gap
Determination of band offsets in AlGaAs/GaAs and InGaAs/GaAs multiple quantum wells, 12:47925 (J;US)
Ion Implantation
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)
Luminescence
Behavior of carriers in quantum wells in GaAs-A ell/sub x/Ga/sub 1-x/As superlattices under in-plane magnetic fields, 12:47895 (RA;US)
Nondestructive Analysis
Rutherford backscattering analysis of GaAs/oxide interface, 12:47904 (R;FR)
Optical Filters
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)
Radiation Scattering Analysis
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
Recombination
Behavior of carriers in quantum wells in GaAs-A ell/sub x/Ga/sub 1-x/As superlattices under in-plane magnetic fields, 12:47895 (RA;US)
Reflectivity
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)
Rutherford Scattering
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
Rutherford backscattering analysis of GaAs/oxide interface, 12:47904 (R;FR)
Visible Spectra
Determination of band offsets in AlGaAs/GaAs and InGaAs/GaAs multiple quantum wells, 12:47925 (J;US)

GALLIUM COMPLEXES
Labelling
Stability constants of Fe-transferrin and Ga-transferrin complexes, 12:48074 (RA;DD;In German)
Radionuclide Kinetics
Stability constants of Fe-transferrin and Ga-transferrin complexes, 12:48074 (RA;DD;In German)

GALLIUM PHOSPHIDES
Crystal Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Electronic Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Optical Filters
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)
Reflectivity
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)

GALVANOMETERS
Design
Low power, low cost, high frequency galvanostat and application to Li/I_2 (P2VP) batteries, 12:48021 (RA;US)
Performance
Low power, low cost, high frequency galvanostat and application to Li/I_2 (P2VP) batteries, 12:48021 (RA;US)

GAMMA ASTRONOMY
For photon energies above 100 KeV.
Reviews
High energy gamma ray astronomy, 12:48568 (RA;US)

GAMMA DOSIMETRY
Monte Carlo Method
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:48990 (J;GB)
Transport Theory
Incorporation of Monte Carlo electron interface studies into photon general cavity theory, 12:48990 (J;GB)

GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS

GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Bremsstrahlung
The efficiency of a bremsstrahlung interrogator: Beam Research Program, 12:48193 (R;US)
Uses
The efficiency of a bremsstrahlung interrogator: Beam Research Program, 12:48193 (R;US)

GANIL
See GANIL CYCLOTRON

GANIL CYCLOTRON
Grand Accelerateur National 'a Ions Lourdes, a heavy ion accelerator consisting of two identical isochronous cyclotrons and a particle booster for injection, located in Orsay, France.
Beam Monitoring
Beam diagnostics at Ganil in 1986, 12:48181 (R;FR)
On line beam diagnostics at Ganil, 12:48182 (R;FR)
Control Equipment
On line beam diagnostics at Ganil, 12:48182 (R;FR)

GARNETS
For silicate garnets only.
Particle Size
Laser diffraction particle size analysis of powders, 12:48280 (R;US)

GAS APPLIANCES
Compressors
Evaluation and testing of trochoid refrigerating compressor. Final report, January-June 1986, 12:47651 (R;US)
Technology Assessment
Technology status of components for gas-fired cooling systems. Topical report, July 1986-January 1987, 12:47650 (R;US)
Testing
Conventional research house planning, acquisition, instrumentation, and characterization tests. Topical report, December 1983-August 1986, 12:47649 (R;US)

GAS COOLANTS
See GASES

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FUELS
See also FUEL GAS
Synthesis
Limits of thermochemical and photochemical syntheses of gaseous fuels: a finite-time thermodynamic analysis. Annual report, January-December 1985, 12:47262 (R;US)

GAS METERS
Research Programs
Basic gas metering. Annual report, April 1984-March 1985, 12:47170 (R;US)

GAS OILS
Boiling point range 204-593°C.
Spot Market
Weak form efficiency of the International Petroleum Exchange, 12:47144 (R;NO)

GAS TURBINE POWER PLANTS
Air Pollution Abatement
Evaluation test on a landfill gas-fired turbine at the Los Angeles County Sanitation District's Puente Hill Landfill Electric Generation Station. Air pollution test report, 12:47351 (R;US)
NO/sub x/ reduction for small gas turbine power plants: Final report, 12:47357 (R;US)
Control Systems
Reliability analysis of a fault-tolerant gas turbine control system: Final report, 12:47341 (R;US)

Gas Fuels
Evaluation test on a landfill gas-fired turbine at the Los Angeles County Sanitation District's Puente Hill Landfill Electric Generation Station. Air pollution test report, 12:47351 (R;US)

GAS TURBINES
See also COAL-FIRED GAS TURBINES
Airfoils
Computation of full-coverage film-cooled airfoil temperatures by two methods and comparison with high heat flux data, 12:48128 (R;US)
Data Compilation
Properties of gasturbines available in the market in combined production of electricity and heat, 12:47347 (R;FI;In Finnish)
Evaluated Data
Properties of gasturbines available in the market in combined production of electricity and heat, 12:47347 (R;FI;In Finnish)
Power Generation
Properties of gasturbines available in the market in combined production of electricity and heat, 12:47347 (R;FI;In Finnish)

GAS UTILITIES
Rate Structure
General-service electric and gas rates for the residential and commercial sectors: 1986. Topical report, 12:47607 (R;US)

GAS WELLS
See NATURAL GAS WELLS

GASES
See also COSMIC GASES
EXHAUST GASES
FUEL GAS
RARE GASES
SYNTHESIS GAS
VAPORS
Feasibility Studies
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma-ray laser. Annual progress report, 30 September 1986-31 May 1987, 12:48114 (R;US)
Heat Treatments
Optimising the use of energy in the heat treatment of metals using protective gas atmospheres, 12:47843 (R;FI;In Finnish)
Thermodynamic Properties
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1986, 12:47177 (R;US)

GASOLINE
Pathogenesis
Effect of 2,3,4-trimethylpentane on the ultrastructure of kidneys from normal versus castrated male rats, 12:48522 (R;US)

GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES

GASTROINTESTINAL TRACT
Radionuclide Kinetics
Gastrointestinal transfer of neptunium (V) in newborn baboons: preliminary results, 12:48496 (R;FR)

GEIGER-MUELLER COUNTERS
Sensitivity
Dosimetry in mixed neutron-gamma fields: the neutron sensitivities of Geiger-Mueller counters, 12:48241 (RA;ZA)

GENE MUTATIONS
Radioinduction
Biological dosimetry: Cytometric approaches to mammalian systems, 12:48521 (B;US)

GENERATING CAPACITY
See CAPACITY

GENERATORS (RADIOISOTOPE)
See RADIOISOTOPE GENERATORS

GENERATORS (STEAM)
See STEAM GENERATORS

GEOGRAPHICAL VARIATIONS
Mathematical Models
Illustrations of a density-equalizing map projection technique, 12:48491 (R;US)

GEOLOGIC DEPOSITS
See also ALLUVIAL DEPOSITS
COAL DEPOSITS
NATURAL GAS DEPOSITS
OIL SHALE DEPOSITS
PETROLEUM DEPOSITS
SALT DEPOSITS
Diagenesis
Deposits of the Creede Caldera, Colorado, 12:48535 (R;US)

GEOLOGIC STRUCTURES
See also REEFS
Mapping
Geological structures from televiewer logs of GT-2, Fenton Hill, New Mexico: Part 2, Rectification, 12:47330 (R;US)
Pattern Recognition
Geological structures from televiewer logs of GT-2, Fenton Hill, New Mexico: Part 1, Feature extraction, 12:47329 (R;US)

GEOMAGNETIC STORMS
See MAGNETIC STORMS

GEOTHERMAL ENERGY
Research Programs
Tapping the earth's geothermal resources: Hydrothermal today, magma tomorrow, 12:47335 (R;US)

GEOTHERMAL FLUIDS
Chemical Analysis
Chemical analysis and sampling techniques for geothermal fluids and gases at the Fenton Hill Laboratory, 12:47331 (R;US)
Development of fiber optics sensors for temperature measurement and chemical analysis in geothermal wells, 12:47333 (R;US)
Sampling
Chemical analysis and sampling techniques for geothermal fluids and gases at the Fenton Hill Laboratory, 12:47331 (R;US)
Downhole fluid sampling at the SSSDP [Salton Sea Scientific Drilling Project] California State 2-14 well, Salton Sea, California, 12:47332 (R;US)
Water Chemistry
Hydrogeochemical investigation of six geothermal sites in Honduras, Central America, 12:47327 (R;US)

GEOTHERMAL SYSTEMS
Geochemistry
Hydrogeochemical investigation of six geothermal sites in Honduras, Central America, 12:47327 (R;US)
Geologic Models
Heat and mass transfer in the Klamath Falls, Oregon, geothermal system, 12:47328 (R;US)
Mathematical Models
Heat and mass transfer in the Klamath Falls, Oregon, geothermal system, 12:47328 (R;US)

GEOTHERMAL WELLS
Sonic Logging
Geological structures from televiewer logs of GT-2, Fenton Hill, New Mexico: Part 1, Feature extraction, 12:47329 (R;US)
Temperature Logging
Development of fiber optics sensors for temperature measurement and chemical analysis in geothermal wells, 12:47333 (R;US)
Well Logging
Geological structures from televiewer logs of GT-2, Fenton Hill, New Mexico: Part 2, Rectification, 12:47330 (R;US)

GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY

GERMANIUM
Crystal Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Electronic Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)

GERMANIUM ALLOYS
Dislocations
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)

Electronic Structure
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Interfaces
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Magnetic Properties
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Plasticity
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Precipitation Hardening
Factors determining the morphology of precipitation in aluminum-germanium and aluminum-silicon alloys, 12:47828 (R;US)
Stress Relaxation
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)

GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY

GERMS (MICROORGANISMS)
See MICROORGANISMS

GIANT CELLS
See TUMOR CELLS

GIANT STARS
Star Evolution
History of gas in sprial galaxies, 12:48625 (RA;US)
Simple theory of bimodal star formation, 12:48624 (RA;US)
Star formation and dynamics in starburst nuclei, 12:48631 (RA;US)

GLASS
See also PHOSPHATE GLASS
Chemical Analysis
Colorometric determination of Fe(II)/Fe(III) ratio in glass, 12:47936 (R;US)
Harmonic Generation
Sum-frequency generation on dye-coated surfaces using collinear and noncollinear excitation geometries, 12:47926 (J;US)
Nondestructive Analysis
Optical characterization of silica aerogel glass, 12:47912 (R;US)
Optical Properties
Optical characterization of silica aerogel glass, 12:47912 (R;US)
Permeability
Estimates of fluid permeability from digital image analysis of porous media, 12:48536 (RA;US)
Physical Radiation Effects
Behavior of fluoride glass optical fibers under gamma irradiation, 12:47889 (R;FR;In French)
Production
Processing and characterizing glass-ceramics, 12:47860 (RA;US)

GLASS INDUSTRY
Hazardous Materials
Health-Hazard Evaluation Report HETA 86-070-1774, Silver Deer Spectrum, Boulder, Colorado, 12:48337 (R;US)
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)

GLASSY METALS
See METALLIC GLASSES

GLUEBALLS
Particle Production
Experimental search of gluonic mesons, 12:48826 (R;FR;In French)
Increased statistics in $\pi p p \rightarrow$ phi phi n and the status of glueball production, 12:48747 (R;US)
Regge Trajectories
Gluonium and Regge trajectories from the Klein-Gordon equation, 12:48797 (RA;SU;In Russian)
Standard Model
Glueballs, 12:48856 (RA;US)

GLUON MODEL
Description of the total cross sections rise in the gluon dominance model, 12:48782 (R;SU)

GLUONIUM
See GLUEBALLS

GLUONS
Green Function
Infrared asymptotics of gluonic Green functions in covariant gauge, 12:48791 (R;SU;In Russian)
Propagator
Infrared asymptotics of gluonic Green functions in covariant gauge, 12:48791 (R;SU;In Russian)
Model for dynamical chiral symmetry breaking and quark condensate, 12:48787 (R;SU)

GLYCERIN
See GLYCEROL

GLYCEROL
Labelling
Synthesis of [2-/sup 3/H]glycerol, 12:48064 (RA;DD;In German)

GOBAR GAS
See METHANE

GOLD
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Charged-Particle Transport
Range-energy relation for Au ions, E/A≦150 MeV, 12:48978 (J;US)
Electronic Structure
High-resolution photoemission study of the electronic structure of the noble-metal (111) surfaces, 12:47844 (J;US)
Gold 197 Reactions
Relativistic nuclear fluid dynamics and VUU kinetic theory, 12:48956 (R;US)
Ion-Atom Collisions
L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions, 12:48731 (J;US)
Oxygen 16 Reactions
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)
Relativisitic heavy ion collisions, 12:48896 (R;US)
Physical Radiation Effects
About properties of point defects in metals, 12:47817 (R;FR)
Point Defects
About properties of point defects in metals, 12:47817 (R;FR)
Quantitative Chemical Analysis
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)

GOLD 197 TARGET
Neutron Reactions
Exciton cascade model for fast neutron reactions, 12:48906 (R;XA)

GOLD ALLOYS
See also GOLD BASE ALLOYS
Physical Radiation Effects
About properties of point defects in metals, 12:47817 (R;FR)
Collapse of defect cascades to dislocation loops, 12:47851 (J;NL)
Point Defects
About properties of point defects in metals, 12:47817 (R;FR)

GOLD BASE ALLOYS
Radiation Scattering Analysis
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
Rutherford Scattering
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)

GOLD IONS
Range
Range-energy relation for Au ions, E/A≦150 MeV, 12:48978 (J;US)

GRAIN ALCOHOL
See ETHANOL

GRAINS (CEREAL)
See CEREALS

GRAND GULF-1 REACTOR
Port Gibson, Mississippi, USA

Chemistry
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
Source Terms
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
GRAND GULF-2 REACTOR
Port Gibson, Mississippi, USA
Chemistry
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
Source Terms
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
GRAND UNIFIED THEORY
Electron-Proton Interactions
E_6 exotic quark production in ep collisions, 12:48777 (R;US)
Mass Formulae
Neutrino mass and the solar neutrino problem, 12:48834 (BA;US)
Neutrinos
Neutrino mass and the solar neutrino problem, 12:48834 (BA;US)
Quarks
E_6 exotic quark production in ep collisions, 12:48777 (R;US)
Supergravity
Low-energy supergravity and a light t quark, 12:48813 (R;SU;In Russian)
Supersymmetry
New type of supersymmetric theories, 12:48802 (RA;SU;In Russian)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Materials Handling
Aerated and vibrated chute feeders for particulate materials: Quarterly technical report for the period June 1, 1987 to August 31, 1987, 12:48095 (R;US)
GRAPHITE
Electronic Structure
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)
Molecular Structure
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)
Order-Disorder Transformations
Electron-diffraction study of rubidium-intercalated graphite, 12:47917 (J;US)
Wave Functions
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GRAVITATION
New notions about space-time and gravitation, 12:49032 (R;SU;In Russian)
Hydrodynamics
On the gravitational instability in an infinite homogeneous medium, 12:49042 (R;JP)
Instability
On the gravitational instability in an infinite homogeneous medium, 12:49042 (R;JP)
GREAT BRITAIN
See UNITED KINGDOM
GREENLAND
Hydroelectric Power Plants
Hydrological hydropower exploration Iterlaa Paamiut/Frederikshaab. Hydrological dimensioning basis 1985 (Greenland), 12:47273 (R;DK;In Danish)
GROUND DISPOSAL
Land Pollution Control
Permit guidance manual on unsaturated zone monitoring for hazardous-waste land-treatment units. Final report, 12:48418 (R;US)
GROUND MOTION
Computerized Simulation
State of the art in the calculation of a reference motion for design purposes. Modification of bedrock motion by superficial, young deposit, 12:48092 (R;FR)
GROUND SOURCE HEAT PUMPS
Computerized Simulation
Design of surface earth-heat-collector. Calculation with a computer model, 12:47633 (R;SE;In Swedish)
Planning
Ground heat technology in group central heating plants in Soedertaelje and Straengnaes. Introduction and obstacle, 12:47632 (R;SE;In Swedish)
GROUND STATES
Wave Functions
Solvable model with an extreme AGP ground state: relationships among fermion pairs, pairons, and natural spin geminals, 12:49017 (RA;US)
GROUND SUBSIDENCE
Environmental Impacts
Mined-land subsidence impacts on farmland with potential application to Illinois: a literature review. Information Circular/1987, 12:47067 (R;US)
GROUND WATER
Chemical Composition
Composition of the ground water in bedrock in the Precambrian shield areas of Finland and other countries, 12:48440 (R;FI;In Finnish)
Geochemistry of shale groundwaters: Survey of available data and postulated mineralogic controls on composition, 12:48544 (R;US)
Flow Models
A linear-flow interpretation of the H-3 multiwell pumping test conducted at the Waste Isolation Pilot Plant (WIPP) site, 12:47231 (R;US)
Isotope Ratio
Natural isotopic labelling in precipitation and initial formation of groundwater, 12:48420 (R;DE;In German)
Radionuclide Migration
The sensitivity index as a screening tooling in the uncertainty analysis of ground-water contaminant transport, 12:47214 (R;US)
Sampling
Sampling guidelines for groundwater quality: Final report, 12:48425 (R;US)
Water Pollution
Final report on the toxicological testing of groundwaters affected by underground coal gasification, 12:47015 (R;US)
Gaseous behavior of tce (trichloroethylene) overlying a contaminated aquifer, 12:48405 (R;US)
Water Treatment
Final report on the toxicological testing of groundwaters affected by underground coal gasification, 12:47015 (R;US)
Photolytic ozonation for protection and rehabilitation of ground-water resources: a mechanistic study. Research report, 12:48433 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GROWTH (CRYSTAL)
See CRYSTAL GROWTH
GUANIDYLAMINOVALERIC ACID
See ARGININE
GULF COAST
Salt Caverns
Gulf coast salt domes and the strategic petroleum reserve, 12:47165 (BA;US)
GULF OF ALASKA
Continental Shelf
Coastal oceanography of the northeastern Gulf of Alaska. Final report, 12:47126 (R;US)

H

H2 REGIONS
Balmer Lines
HII regions in M51: radio and optical observations, 12:48602 (RA;US)
Classification
Spectral classification of emission-line galaxies, 12:48680 (RA;US)
Emission Spectra
Spectral classification of emission-line galaxies, 12:48680 (RA;US)
Infrared Spectra
Infrared emission and excitation in LMC HII regions, 12:48605 (RA;US)
Radiowave Radiation
HII regions in M51: radio and optical observations, 12:48602 (RA;US)
Star Evolution
Measuring star formation rates in blue galaxies, 12:48596 (RA;US)
HABITAT
Mitigation
A wildlife habitat protection, mitigation and enhancement plan for eight federal hydroelectric facilities in the Willamette River Basin: Final report, 12:47277 (R;US)
HADRON REACTIONS
Fast hadron energy losses by excitation of nuclear matter, 12:48921 (R;SU;In Russian)
Scattering Amplitudes
On the forward scattering amplitude for hadron-nucleus optical potentials, 12:48914 (RA;SU;In Russian)
Total Cross Sections
On the forward scattering amplitude for hadron-nucleus optical potentials, 12:48914 (RA;SU;In Russian)
HADRON-HADRON INTERACTIONS
Elastic Scattering
Theoretical group nature of an impact parameter and elastic scattering of hadrons, 12:48784 (R;SU;In Russian)
Gluon Model
Gluonic structure and strong interactions of hadrons at high energies, 12:48786 (R;SU)
Impact Parameter
Theoretical group nature of an impact parameter and elastic scattering of hadrons, 12:48784 (R;SU;In Russian)
HADRONIC ATOMS
See also PROTONIUM
Energy Levels
Hadronic atom in the Lee model, 12:48719 (RA;SU;In Russian)
HADRONS
Multiple Production
Inclusive spectra in hard processes, 12:48781 (R;SU)
Particle Production
Comparison of hadron multiplicities in gluon and quark jets, 12:48790 (R;SU)
Structure Functions
Polarization effects in hadron structure functions and in quark and gluon fragmentation, 12:48835 (J;US)
HALL GENERATORS
See MHD GENERATORS
HAMILTON OPERATORS
See HAMILTONIANS
HAMILTONIANS
Trajectories
Periodic trajectories for a two-dimensional nonintegrable Hamiltonian, 12:49049 (J;US)
HANDLING (WASTES)
See WASTE MANAGEMENT
HANFORD ATOMIC PRODUCTS OPERATION
See HAPO
HAPO
Waste Management
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1986, 12:47229 (R;US)
HARD-SPHERE MODEL
Heat Flow
Hard-sphere heat conductivity via nonequilibrium molecular dynamics, 12:49050 (J;US)
HARMONIC GENERATION
Efficiency
Sum-frequency generation on dye-coated surfaces using collinear and noncollinear excitation geometries, 12:47926 (J;US)
Excitation
Sum-frequency generation on dye-coated surfaces using collinear and noncollinear excitation geometries, 12:47926 (J;US)
HARMONIC OSCILLATOR MODELS
Meetings
JINR rapid communications. Collection, 12:49034 (R;SU)
HARMONIC OSCILLATORS
Feynman Path Integral
Harmonic oscillator at finite temperature using path integrals, 12:49041 (R;NO)
Statistical Mechanics
Harmonic oscillator at finite temperature using path integrals, 12:49041 (R;NO)
Wigner Coefficients
Open quantum system of two coupled harmonic oscillators, 12:49033 (RA;SU)
HARTREE APPROXIMATION
See HARTREE-FOCK METHOD
HARTREE-FOCK METHOD
Graphs
Graph approach to the gradient expansion of density functionals, 12:47953 (RA;US)
Topology
Graph approach to the gradient expansion of density functionals, 12:47953 (RA;US)
HAZ
See HEAT AFFECTED ZONE
HAZARDOUS MATERIALS
Not for radioactive materials.
Anesthetics
Health-Hazard Evaluation Report HETA 86-328-1773, Memorial Hospital of Southern Oklahoma, Ardmore, Oklahoma, 12:48339 (R;US)
Arsenic
Preliminary survey report: control technology for gallium arsenide processing at Hewlett Packard, San Jose, California, 12:48353 (R;US)
Asbestos
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)
Butadiene
Industry-wide studies report of an in-depth survey at Firestone Synthetic Rubber and Latex Company, Lake Charles, Louisiana, 12:48344 (R;US)
Carbon Monoxide
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)
Chlorinated Aromatic Hydrocarbons
Health-Hazard Evaluation Report HETA 84-180-1776, Jacksonville Fire Department, Jacksonville, Florida, 12:48351 (R;US)
Dusts
Formaldehyde-exposure characterization in garment-manufacturing plants: a composite summary of three in-depth industrial-hygiene surveys, 12:48342 (R;US)
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)
Fly Ash
Migration of hazardous substances through soil. Part 3. Flue-gas desulfurization and fly-ash wastes. Final report, December 1974-July 1977, 12:48403 (R;US)

Formaldehyde
Formaldehyde-exposure characterization in garment-manufacturing plants: a composite summary of three in-depth industrial-hygiene surveys, 12:48342 (R;US)
Gallium Arsenides
Preliminary survey report: control technology for gallium arsenide processing at Morgan Semiconductor Division, Garland, Texas, 12:48352 (R;US)
Preliminary survey report: control technology for gallium arsenide processing at Hewlett Packard, San Jose, California, 12:48353 (R;US)
Lead
Health-Hazard Evaluation Report HETA 86-070-1774, Silver Deer Spectrum, Boulder, Colorado, 12:48337 (R;US)
Methylene Chloride
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)
Occupational Exposure
NIOSH (National Institute for Occupational Safety and Health) pocket guide to chemical hazards. Second edition, 12:48529 (R;US)
Organic Compounds
Separation of dilute hazardous organics by low-pressure composite membranes. Final report, April 1985-December 1986, 12:48432 (R;US)
Organic Solvents
Health-Hazard Evaluation report HETA 84-496-1766, Applied Plastics, Slocum, Rhode Island, 12:48336 (R;US)
Organic Wastes
Evaluation of combustion processes for destruction of liquid organic wastes, GA Technologies, Incorporated, 12:48347 (R;US)
Particulates
Health-Hazard Evaluation Report HETA 85-195-1768, Dale Electronics, Incorporated, Norfolk, Nebraska, 12:48338 (R;US)
Radiation Monitoring
Health-Hazard Evaluation Report HETA 85-111-1770, Feed Materials Production Center, Fernald, Ohio, 12:47193 (R;US)
Smokes
Health-Hazard Evaluation Report HETA 85-150-1767, Warwick Fire Department, Warwick, Rhode Island, 12:48340 (R;US)
Health-Hazard Evaluation Report HETA 86-410-1772, HCFA-Meadows East Building, Baltimore, Maryland, 12:48345 (R;US)
Waste Disposal
Permit guidance manual on unsaturated zone monitoring for hazardous-waste land-treatment units. Final report, 12:48418 (R;US)
Superfund Record of Decision (EPA Region 2): Florence Land Recontouring (FLR) landfill, Florence, Mansfield, and Springfield, New Jersey, June 1986. Final report, 12:48412 (R;US)
Superfund Record of Decision (EPA Region 4): A. l. Taylor site (Valley of the Drums), Bullitt County, Kentucky, June 1986. Final report, 12:48413 (R;US)
Superfund Record of Decision (EPA Region 3): Drake Chemical Site (Phase 2), Lock Haven, Clinton County, Pennsylvania (second remedial action), May 1986. Final report, 12:48445 (R;US)
Superfund Record of Decision (EPA Region 2): Lang Property, Pemberton Township, New Jersey, September 1986. Final report, 12:48447 (R;US)
Superfund Record of Decision (EPA Region 4) Gallaway Ponds Site, Gallaway, Tennessee, September 1986. Final report, 12:48448 (R;US)
Superfund Record of Decision (EPA Region 5): Lake Sandy Jo/M and M landfill, Lake County, Indiana, September 1986. Final report, 12:48414 (R;US)
Superfund Record of Decision (EPA Region 1): Baird and McGuire, Holbrook, Massachusetts, September 1986. Final report, 12:48415 (R;US)
Superfund Record of Decision (EPA Region 2): Marathon Battery Company site, Cold Spring, Putnam County, New York, September 1986. Final report, 12:48449 (R;US)
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)
Waste Management
From pollution to prevention: a progress report on waste reduction. Special report, 12:47584 (R;US)
Hazardous waste management strategy in Illinois: Government's role, 12:47707 (BA;US)
Waste-water characterization and hazardous-waste survey, Castle AFB, California. Final report, 22-27 September 1986, 12:48423 (R;US)
Wastes
Migration of hazardous substances through soil. Part 3. Flue-gas desulfurization and fly-ash wastes. Final report, December 1974-July 1977, 12:48403 (R;US)

HDO
See DEUTERIUM COMPOUNDS

HEADING MACHINES
Jets
Rock cutting by means of picks assisted by high-pressure water jets, 12:47075 (R;XE;In French)

HEALTH HAZARDS
Monitoring
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)

HEALTH PHYSICS
See RADIATION PROTECTION

HEAT AFFECTED ZONE
Microstructure
Welding research (Microstructure development and relationship to mechanical properties of a weld), 12:47836 (RA;US)

HEAT DISSIPATION
See ENVIRONMENTAL TRANSPORT
HEAT TRANSFER

HEAT ENGINES
See also INTERNAL COMBUSTION ENGINES
STIRLING ENGINES
Heat Resistant Materials
Development of alumina - and mullite - SiC whisker composites: High temperature properties, 12:47931 (BA;US)
Materials Testing
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)

HEAT EXCHANGERS
See also RADIATORS
Cooling Systems
Application of failure analysis techniques, 12:48139 (RA;US)
Failure Mode Analysis
Application of failure analysis techniques, 12:48139 (RA;US)
Freezing
Frost formation in heat exchangers - a literature study, 12:47654 (R;SE;In Swedish)
Performance
Ventilation heat exchangers - do they work in private dwellinghouses?, 12:47636 (R;SE;In Swedish)

HEAT PUMPS
See also AIR SOURCE HEAT PUMPS
GROUND SOURCE HEAT PUMPS
Compressors
Evaluation and testing of trochoid refrigerating compressor. Final report, January-June 1986, 12:47651 (R;US)
Evaporators
Simulation model for evaporation equipment, 12:47656 (R;FI;In Finnish)
Field Tests
Natural gas driven heat pump in district heating, 12:47710 (R;FI;In Finnish)
Natural Gas
Natural gas driven heat pump in district heating, 12:47710 (R;FI;In Finnish)

HEAT RECOVERY EQUIPMENT
Field Tests
Field test of a ceramic heat-recovery system for an aluminum reverberatory furnace. Final report, November 1984-December 1986, 12:47703 (R;US)
Fluidized bed waste heat recovery system: Program final summary, September 22, 1981-November 30, 1986, 12:47671 (R;US)
HEAT TRANSFER
R Codes
Assessment of interfacial shear and wall heat transfer of RELAP5/MOD2/36.02 during reflooding, 12:47411 (R;CH)
Research Programs
Investigation of heat transfer inside a cross-flowed pebble bed at temperatures up to 1100degC, 12:48129 (R;DE;In German)
Reviews
Annual review of numerical fluid mechanics and heat transfer. Volume 1, 12:48133 (B;US)
HEAT TRANSMISSION
See HEAT TRANSFER
HEAT TREATMENTS
In metallurgy as well as for the biological effects of heat.
Energy Consumption
Optimising the use of energy in the heat treatment of metals using protective gas atmospheres, 12:47843 (R;FI;In Finnish)
Process Control
Optimising the use of energy in the heat treatment of metals using protective gas atmospheres, 12:47843 (R;FI;In Finnish)
HEATERS
See also SPACE HEATERS
WATER HEATERS
Retrofitting
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
HEATING SYSTEMS
See also SOLAR HEATING SYSTEMS
Control Systems
Decentralized HVAC and plumbing system. Preliminary study, 12:47641 (R;FI;In Finnish)
Energy Consumption
Decentralized HVAC and plumbing system. Preliminary study, 12:47641 (R;FI;In Finnish)
Planning
Group heating plants for industrial heating applications. Alternative heat production systems and potential for oil substitution, 12:47668 (R;SE;In Swedish)
HEAVY ION ACCELERATORS
Includes combined accelerator types for heavy ion acceleration.
See also ATLAS SUPERCONDUCTING LINAC
GANIL CYCLOTRON
MUNICH SUSE CYCLOTRON
Beam Transport
High-current beam transport with multiple beam arrays, 12:48220 (J;US)
HEAVY ION FUSION REACTIONS
Application of polarized nuclei to fusion, 12:49094 (R;US)
HEAVY ION REACTIONS
See also CARBON 12 REACTIONS
FLUORINE 19 REACTIONS
LANTHANUM 139 REACTIONS
LITHIUM 6 REACTIONS
LITHIUM 7 REACTIONS

NICKEL 58 REACTIONS
OXYGEN 18 REACTIONS
Computerized Simulation
Relativisitic hydrodynamics and heavy ion reactions, 12:48951 (R;US)
Emission Spectra
Lateral ejection of low energy protons in high energy heavy-ion collisions, 12:48916 (R;JP)
Energy Absorption
Nuclear stopping and energy deposition into the central rapidity region, 12:48955 (R;US)
Hydrodynamic Model
Nuclear stopping and energy deposition into the central rapidity region, 12:48955 (R;US)
Relativisitic hydrodynamics and heavy ion reactions, 12:48951 (R;US)
Nuclear Reaction Kinetics
Heavy ion collisions: kinetic energy damping, nucleon emission, 12:48939 (RA;SU;In Russian)
Lateral ejection of low energy protons in high energy heavy-ion collisions, 12:48916 (R;JP)
Oxygen 16 Reactions
Relativisitic heavy ion collisions, 12:48896 (R;US)
Quark Matter
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)
Relativisitic heavy ion collisions, 12:48896 (R;US)
Two-Nucleon Transfer Reactions
Anomalous two-neutron transfer cross sections at large separation in heavy ion reactions, 12:48961 (J;NL)
HEAVY IONS
Whenever possible use one of the more specific terms listed under ION BEAMS.
Collisions
Physics Division annual review, 1 April 1986-31 March 1987 (ATLAS facility), 12:48900 (R;US)
Confinement
Distributions of ions in axisymmetric traps, 12:48197 (RA;US)
Interactions
Physics Division annual review, 1 April 1986-31 March 1987 (ATLAS facility), 12:48900 (R;US)
Ion Sources
Science with multiply-charged ions at Brookhaven National Laboratory, 12:48711 (RA;US)
Storage Rings
Heavy ion storage rings, 12:48223 (RA;US)
Physics with fast stored ions, 12:48222 (RA;US)
Traps
Distributions of ions in axisymmetric traps, 12:48197 (RA;US)
HEAVY LEPTONS
Particle Production
Search for neutral heavy leptons from ν - N scattering, 12:48771 (J;US)
HEAVY LIQUID BUBBLE CHAMBERS
Particle Tracks
Error analysis during charged particle parameters measuring in the experiments with a xenon bubble chamber. 1. Main error sources. Instrumental errors, 12:48250 (R;SU;In Russian)
Error analysis during charged particle parameters measuring in the experiments with a xenon bubble chamber. 2. Mathematic models for measurement errors of particle track geometrical parameters, 12:48252 (R;SU;In Russian)
HEAVY NUCLEI
For nuclei from mass 181 upwards.

Collective Excitations
Equation of motion method to describe quasiparticle structures in transitional and deformed nuclei, 12:48932 (RA;SU)
Giant Resonance
Experimental investigation of single-particle modes at high excitation energy, 12:48873 (RA;SU)
Strength Functions
Experimental investigation of single-particle modes at high excitation energy, 12:48873 (RA;SU)
HEAVY OILS
See PETROLEUM
HELIOSPHERE
Influence zone of the sun in interstellar space, delimited by the ejected solar plasma.

Configuration
Studies of the interplanetary magnetic field: IMP's to Voyager, 12:48563 (RA;US)
Cosmic Ray Flux
Cosmic rays in the heliosphere, 12:48564 (RA;US)
Disturbances
Studies of the interplanetary magnetic field: IMP's to Voyager, 12:48563 (RA;US)

HELIOTRON
Research Programs
Progress in stellarator/heliotron research, 1981-1986: Executive summary, 12:49140 (R;US)

HELIUM
Autoionization
Sum-rules in resonance calculations with complex coordinates, 12:49021 (RA;US)
Crystal Structure
Noble gas atoms as impurities in silicon, 12:47896 (RA;US)
Elastic Scattering
Variationally improved transition amplitudes from time-dependent Hartree-Fock wave functions: application to He + He^{2+} collisions, 12:47981 (RA;US)
Electron Transfer
Variationally improved transition amplitudes from time-dependent Hartree-Fock wave functions: application to He + He^{2+} collisions, 12:47981 (RA;US)
Electronic Structure
Griffin-Hill-Wheeler version of the Hartree-Fock equations, 12:47949 (RA;US)
Noble gas atoms as impurities in silicon, 12:47896 (RA;US)
Intermolecular Forces
Theoretical studies of electron and proton transfer processes in fluids: Progress report, August 1986 to September 1987, 12:47948 (R;US)
Ion-Atom Collisions
Excitations during collisionally-induced electron detachment of negative ions. Final report, 1 August 1983-31 December 1986, 12:48699 (R;US)
Thermal Diffusion
Mound activities in chemical and physical research: January-June 1987 (He(Xe)-CO_2), 12:47991 (R;US)

HELIUM 3
See also HELIUM 3 A
HELIUM 3 B
Form Factors
Multiquark systems and the lightest nucleus form factors, 12:48938 (RA;SU;In Russian)
Melting
NMR evidence for solid-fluid transition near 250 K of ^{3}He bubbles in palladium tritide (NUCLEAR MAGNETICRESONANCE), 12:47872 (J;US)
Quark Model
Multiquark systems and the lightest nucleus form factors, 12:48938 (RA;SU;In Russian)
Superfluidity
Superfluid plasmas: Multivelocity nonlinear hydrodynamics of superfluid solutions with charged condensates coupled electromagnetically, 12:48741 (J;US)

HELIUM 3 A
Growth
Nucleation and growth of ^{3}He-B in ^{3}He-A, 12:48737 (R;US)
Magnons
Paramagnons in non-equilibrium /sup 3/He-A, 12:48735 (RA;SU;In Russian)
Nucleation
Nucleation and growth of ^{3}He-B in ^{3}He-A, 12:48737 (R;US)

HELIUM 3 B
Growth
Nucleation and growth of ^{3}He-B in ^{3}He-A, 12:48737 (R;US)
Nucleation
Nucleation and growth of ^{3}He-B in ^{3}He-A, 12:48737 (R;US)

HELIUM 3 REACTIONS
Charge-Exchange Reactions
Spin excitations in nuclei, 12:48936 (RA;SU;In Russian)

HELIUM 3 TARGET
Proton Reactions
Nuclear dynamics of bound eta mesons: Eta-mesic nuclei and mesic compound-nucleus resonances, 12:48950 (R;US)

HELIUM 4
Form Factors
Elastic electron scattering at high momentum transfer and the quark structure of /sup 4/He, 12:48911 (RA;SU;In Russian)

HELIUM 4 REACTIONS
See ALPHA REACTIONS

HELIUM 4 TARGET
Electron Reactions
Electron interactions with nuclei: Progress report, 12:48867 (R;US)

HELIUM 5
Baryon-Baryon Interactions
^{5}He: hadrons or quarks, 12:48966 (J;US)
Hypernuclei
^{5}He: hadrons or quarks, 12:48966 (J;US)

HELIUM COMPOUNDS
Elastic Scattering
Variationally improved transition amplitudes from time-dependent Hartree-Fock wave functions: application to He + He^{2+} collisions, 12:47981 (RA;US)
Electron Transfer
Variationally improved transition amplitudes from time-dependent Hartree-Fock wave functions: application to He + He^{2+} collisions, 12:47981 (RA;US)

HEMATITE
Reduction
Direct reduction of hematite fines with coal in a fluidized bed, 12:47106 (R;ZA)

HEMATOPOIETIC SYSTEM
See also BONE MARROW
Radiation Injuries
Radiation injury to the canine thymus lymphohematopoietic stem cells - correlation with functional deficits. Technical report, 22 February 1984-30 November 1985, 12:48495 (R;US)

HEMOGLOBIN
Molecular Structure
Hexagonal bilayer structures formed by three out of the four subunits of the extracellular hemoglobin of Lumbricus terrestris, 12:48457 (J;US)

HEPTENES
Structural Models
Study of improved methods for predicting chemical equilibria: Technical progress report for the period July 1, 1986 to September 1, 1987, 12:47947 (R;US)
Thermodynamic Properties
Study of improved methods for predicting chemical equilibria: Technical progress report for the period July 1, 1986 to September 1, 1987, 12:47947 (R;US)

HETEROCYCLIC COMPOUNDS
See also THIOPHENE
Labelling
Synthesis of no-carrier-added (NCA) [18F]fluoroalkyl halides and their application in the syntheses of [^{18}F]fluoroalkyl derivatives of neurotransmitter receptor active compounds, 12:48083 (J;GB)
Synthesis of [^{11}C]SCH 23390 for dopamine D1 receptor studies, 12:48084 (J;GB)

HEXENES
Structural Models
Study of improved methods for predicting chemical equilibria: Technical progress report for the period July 1, 1986 to September 1, 1987, 12:47947 (R;US)
Thermodynamic Properties
Study of improved methods for predicting chemical equilibria: Technical progress report for the period July 1, 1986 to September 1, 1987, 12:47947 (R;US)

HFIR REACTOR
Data Compilation
High Flux Isotope Reactor quarterly report, January through March 1987, 12:47456 (R;US)
Reactor Operation
High Flux Isotope Reactor quarterly report, January through March 1987, 12:47456 (R;US)

HIGGS BOSONS
Mass
Restrictions on two Higgs doublet models and CP violation at the unification scale, 12:48860 (R;US)
HIGGS MODEL
CP Invariance
Restrictions on two Higgs doublet models and CP violation at the unification scale, 12:48860 (R;US)
Mass Doublets
Restrictions on two Higgs doublet models and CP violation at the unification scale, 12:48860 (R;US)
HIGH ALTITUDE (STRATOSPHERE)
See STRATOSPHERE
HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
JINR rapid communications. Collection, 12:48746 (R;SU;In Russian)
Quantum radiophysics. Collection, 12:47805 (R;SU;In Russian)
Experiment Planning
Some advanced accelerator projects and ideas, 12:48773 (BA;US)
Research Programs

HIGH FLUX NEUTRON SOURCE FACILITY
See NEUTRON SOURCE FACILITIES
HIGH VOLTAGE DIRECT CURRENT SYSTEMS
See HVDC SYSTEMS
HIGH-FREQUENCY HEATING
See also ECR HEATING
Electric Potential
Effect of electrostatic field on behaviour of peripheric plasma at high-frequency heating, 12:49086 (R;SU;In Russian)
HIGH-LEVEL RADIOACTIVE WASTES
Forecasting
World nuclear fuel cycle requirements, 1987, 12:47604 (R;US)
Inventories
World nuclear fuel cycle requirements, 1987, 12:47604 (R;US)
Radioactive Waste Disposal
PMF (probable maximum flood) study for Nevada Nuclear Waste Storage Investigation Project (NNWSI), 12:47210 (R;US)
Underground Disposal
Distribution and chemistry of diagenetic minerals at Yucca Mountain, Nye County, Nevada (NNWSI), 12:47213 (R;US)
Draft Underground Test Plan for site characterization and testing in an exploratory shaft facility in salt (Includes glossary), 12:47207 (R;US)
Quarterly brine migration data report, January-March 1985: Nuclear waste repository simulation experiments (brine migration), Asse Mine of the Federal Republic of Germany, 12:47208 (R;US)
Specification of a test problem for HYDROCOIN [Hydrologic Code Intercomparison] Level 3 Case 2: Sensitivity analysis for deep disposal in partially saturated, fractured tuff (NNWSI), 12:47230 (R;US)
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
The carbonate complexation of plutonium(IV) (NNWSI), 12:47211 (R;US)
The transport of uranium and technetium through the unsaturated tuffs, Yucca Mountain, Nevada (NNWSI), 12:47212 (R;US)
Waste package performance assessment: Deterministic system model, program scope and specification (NNWSI), 12:47232 (R;US)
HIGH-VOLTAGE PULSE GENERATORS
Electric Currents
A tutorial on Rogowski coil theory and operation, 12:48289 (R;US)
HIPPURAN
Labelling
Comparative studies of FN-1 and Whatman-4 chromatographic papers for the determination of the radiochemical purity of [/sup 131/I]o-iodohippurate and [/sup 125/I]o-iodohippurate, 12:48070 (RA;DD;In German)
Development of a labelling procedure for preparing [/sup 125/I]-o-iodohippurate, 12:48057 (RA;DD;In German)
HIPPURIC ACID
Labelling
Comparative studies between paperelectrophoresis (PEP), paperchromatography (PC) and thin layer chromatography (TLC) for the determination of the radiochemical purity of [/sup 131/I]NaI and [/sup 131/I]o-iodo hippuric acid, 12:48069 (RA;DD)
HOG FUEL
See WOOD WASTES
HOLES
Absence of electrons from otherwise filled electron bands; see also BLACK HOLES, CAVITIES, OPENINGS, BOREHOLES, and VOIDS.
Energy Gap
Ab-initio MO electronic structure calculations of defect-pair complexes in silicon, 12:47983 (RA;US)
HOLMIUM
Ion-Atom Collisions
L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions, 12:48731 (J;US)
HOLMIUM BORIDES
Ultrasonic Testing
Relaxation attenuation in Er/sub 0.187/Ho/sub 0.813/Rh/sub 4/B/sub 4/ and HoRh/sub 4/B/sub 4/, 12:47877 (BA;US)
HOLMIUM COMPLEXES
Stability
Physico-chemical properties of lanthanoid-albumin complexes, 12:48075 (RA;DD;In German)
HOLMIUM IONS
Stimulated Emission
Operation of Ho:YAG at intermediate temperatures, 12:48119 (BA;US)
HOLMIUM ISOTOPES
Alpha Decay
Radioactivities with $146 \leqq A \leqq 152$ investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Beta Decay
Radioactivities with $146 \leqq A \leqq 152$ investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Proton Emission Decay
Radioactivities with $146 \leqq A \leqq 152$ investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
HONDURAS
Geothermal Resources
San Ignacio (La Tembladera) geothermal site, Departamento de Francisco Morazan, Honduras, Central America: Geological field report, 12:47325 (R;US)
Geothermal Systems
Hydrogeochemical investigation of six geothermal sites in Honduras, Central America, 12:47327 (R;US)
HOSPITALS
Fuel Cell Power Plants
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Volume 2. Topical report, 1983-1985, 12:47624 (R;US)
Hazardous Materials
Health-Hazard Evaluation Report HETA 86-328-1773, Memorial Hospital of Southern Oklahoma, Ardmore, Oklahoma, 12:48339 (R;US)

HOT PLASMA
Collisions
General approach to the computation of local transport coefficients with finite Larmor effects in the collision contribution, 12:49063 (R;FR)
Electric Fields
Development of corpuscular-optical method for electric field measurement, 12:49087 (R;SU;In Russian)
Kinetic Equations
Kinetic equation for a magnetized plasma, 12:49062 (R;FR)
Magnetic Fields
Kinetic equation for a magnetized plasma, 12:49062 (R;FR)
Transport Theory
General approach to the computation of local transport coefficients with finite Larmor effects in the collision contribution, 12:49063 (R;FR)
HOT WATER HEATERS
See WATER HEATERS
HOUGH-POWELL DEVICES
See FLYING SPOT DIGITIZERS
HOUSEHOLDS
Energy Consumption
Kitchen ranges for both central heating and cooking, 12:47658 (R;FI;In Finnish)
Food Processing
Kitchen ranges for both central heating and cooking, 12:47658 (R;FI;In Finnish)
HOUSES
Air Conditioning
Conventional research house planning, acquisition, instrumentation, and characterization tests. Topical report, December 1983-August 1986, 12:47649 (R;US)
Construction
Influence of the thermal mass and heat distribution system on the energy consumption of small houses, 12:47640 (R;FI;In Finnish)
Energy Consumption
Influence of the thermal mass and heat distribution system on the energy consumption of small houses, 12:47640 (R;FI;In Finnish)
Energy Expenses
Adaptive capacity of energy systems. Risks of long-range engagements. Method of analysis and results, 12:47575 (R;SE;In Swedish)
Heat Distribution Systems
Influence of the thermal mass and heat distribution system on the energy consumption of small houses, 12:47640 (R;FI;In Finnish)
Radon
Development and demonstration of indoor radon-reduction measures for 10 homes in Clinton, New Jersey. Final report, April 1986-January 1987, 12:48384 (R;US)
Space Heating
Conventional research house planning, acquisition, instrumentation, and characterization tests. Topical report, December 1983-August 1986, 12:47649 (R;US)
Ventilation Systems
Ventilation heat exchangers - do they work in private dwellinghouses?, 12:47636 (R;SE;In Swedish)
Water Heating
Hot-water use in low-income households and the ability of integral solar water heaters to accommodate these requirements. Special report, 12:47648 (R;ZA)
HPD DEVICES

HUMAN POPULATIONS
Health Hazards
Mixtures of toxic agents and attributable risk calculations, 12:48519 (J;US)
Radiation Doses
Proposal for a generally applicable de minimis dose, 12:48511 (J;US)
Radioactive fallout over Norway after the reactor accident in USSR. Radioactivity in foodstuffs 1986, 12:47480 (R;NO;In Norwegian)
HUMANS
See HUMAN POPULATIONS
HVDC SYSTEMS
69 to 230 kV.
Thyristors
Finite element simulation and automated defect detection for thyristors: Final report, 12:47364 (R;US)
HYBRID ELECTRIC-POWERED VEHICLES
Computerized Control Systems
Automatic control of a hybrid vehicle, 12:47791 (RA;US)
Design
Future hybrid electromechanical very advanced propulsion systems for civilian wheeled and tracked all-terrain vehicles with extremely high mobility, 12:47794 (RA;US)
Hybrid vehicle applications for stochastic road load environments, 12:47795 (RA;US)
Roadway powered electric vehicle: an all-electric hybrid system, 12:47749 (RA;US)
Electric Batteries
Batteries for hybrid vehicles or other high-power applications, 12:47789 (RA;US)
Feasibility Studies
Roadway powered electric vehicle: an all-electric hybrid system, 12:47749 (RA;US)
Marketing Research
Hybrid vehicles and consumer preferences, 12:47788 (RA;US)
Performance
Electric hybrid car, 12:47792 (RA;US)
Hybrid vehicles and consumer preferences, 12:47788 (RA;US)
Performance Testing
Hybrid vehicle applications for stochastic road load environments, 12:47795 (RA;US)
Petrol-electric hybrid drive in the VW Golf, 12:47793 (RA;US)
Propulsion Systems
Hybrid vehicle revisited, 12:47790 (RA;US)
Research Programs
Electric and hybrid vehicles status and development in Europe, by A.V.E.R.E., 12:47718 (RA;US)
Technology Assessment
Future hybrid electromechanical very advanced propulsion systems for civilian wheeled and tracked all-terrain vehicles with extremely high mobility, 12:47794 (RA;US)
HYDRATATION
See HYDRATION
HYDRATED ELECTRONS
See HYDRATION
SOLVATED ELECTRONS
HYDRATION
Addition of water; for addition of hydrogen use HYDROGENATION.
Research Programs
Theoretical studies of electron and proton transfer processes in fluids: Progress report, August 1986 to September 1987, 12:47948 (R;US)
HYDRAULIC RAMS
See PUMPS
HYDRAULICS
R Codes
Assessment of interfacial shear and wall heat transfer of RELAP5/MOD2/36.02 during reflooding, 12:47411 (R;CH)
HYDRIDES

Environmental Impacts
A wildlife habitat protection, mitigation and enhancement plan for eight federal hydroelectric facilities in the Willamette River Basin: Final report, 12:47277 (R;US)
Fish impingement at Ontario Hydro's generating stations, 12:47294 (RA;US)
Water Resources
Hydrological hydropower exploration Iterlaa Paamiut/Frederikshaab. Hydrological dimensioning basis 1985 (Greenland), 12:47273 (R;DK;In Danish)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
Corrosive Effects
Hydrofluoric acid-resistant composite window and method for its fabrication, 12:47660 (P;US)
Dissociation
Reaction field effects on the electron distribution and chemical reactivity of molecules, 12:47972 (RA;US)

HYDROGEN
Autoionization
Complex scaling method: application to autoionization, predissociation, and multiphoton resonances, 12:49020 (RA;US)
Chemical Reaction Kinetics
Hydrogen generation during fuel-coolant interactions, 12:47528 (RA;US)
Chemical Reactions
Dynamics calculations of kinetic isotope effects for the reactions of muonium atoms with F_2 and Cl_2, 12:47970 (RA;US)
Rotational distributions from resonances in H + H_2, 12:47980 (RA;US)
Dissociation
Complex scaling method: application to autoionization, predissociation, and multiphoton resonances, 12:49020 (RA;US)
Electron Reactions
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
Fuel-Coolant Interactions
Hydrogen generation during fuel-coolant interactions, 12:47528 (RA;US)
Lamb Shift
Status of QED [Quantum Electrodynamics] in atomic physics, 12:48702 (RA;US)
Measuring Instruments
Automation of a hydrogen probe for determination of hydrogen solubilities in coal liquids solvents, 12:47039 (R;US)
Photoionization
Complex scaling method: application to autoionization, predissociation, and multiphoton resonances, 12:49020 (RA;US)
Observation of Autler-Townes splitting in the multiphoton ionization of H_2: Measurement of vibronic transition moments between excited electronic states, 12:48728 (J;US)
Positron-Atom Collisions
Evaluation of cross section for electron capture by positrons, 12:48729 (J;US)
Potentials
Multichannel resonance optimization with an optical potential, 12:49025 (RA;US)
Resonance Absorption
Complex scaling method: application to autoionization, predissociation, and multiphoton resonances, 12:49020 (RA;US)
Rotational States
Rotational distributions from resonances in H + H_2, 12:47980 (RA;US)
Solubility
Automation of a hydrogen probe for determination of hydrogen solubilities in coal liquids solvents, 12:47039 (R;US)

HYDROGEN 1 TARGET
Deuteron Reactions
On the mechanism of relativistic deuteron fragmentation on nuclei, 12:48947 (R;SU;In Russian)
Proton Reactions
Model dependence of pp → npπ^+ spin observables, 12:48968 (J;US)

INCIDENTS
See ACCIDENTS
INCINERATION
See COMBUSTION
INCINERATORS
Performance
Evaluation of combustion processes for destruction of liquid organic wastes, GA Technologies, Incorporated, 12:48347 (R;US)
INCONEL 600
Crack Propagation
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
Residual and applied stress analysis of an alloy 600 row 1 U-bend: Final report, 12:47416 (R;US)
Intergranular Corrosion
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
Stress Corrosion
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
Residual and applied stress analysis of an alloy 600 row 1 U-bend: Final report, 12:47416 (R;US)
IN-CORE FUEL MANAGEMENT
See FUEL MANAGEMENT
INDIUM 111
Isotope Production
Separation of /sup 111/In from irradiated silver targets, 12:48042 (RA;DD;In German)
Thermochromatography
Separation of /sup 111/In from irradiated silver targets, 12:48042 (RA;DD;In German)
INDIUM 113
Isotopic Exchange
Labelling of DTPA-HSA microspheres with /sup 113m/In, 12:48056 (RA;DD;In German)
INDIUM ALLOYS
Radiation Scattering Analysis
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
Rutherford Scattering
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
INDOOR AIR POLLUTION
Air Pollution Control
Development and demonstration of indoor radon-reduction measures for 10 homes in Clinton, New Jersey. Final report, April 1986-January 1987, 12:48384 (R;US)
Measuring Methods
Field monitoring design considerations for assessing indoor exposures to combustion pollutants, 12:48377 (J;GB)
Occupational Exposure
Variation of workplace atmospheres, 12:48318 (R;US)
Remedial Action
Development and demonstration of indoor radon-reduction measures for 10 homes in Clinton, New Jersey. Final report, April 1986-January 1987, 12:48384 (R;US)
Research Programs
Indoor exposure assessment, 12:48325 (RA;US)
Volatile organic contaminants in indoor air, 12:48324 (RA;US)
INDUSTRIAL PARKS
Cogeneration
Cogeneration for industrial and mixed-use parks: Research Project 1276-19, 12:47696 (RA;US)
INDUSTRIAL PLANTS
See also COAL GASIFICATION PLANTS
FEED MATERIALS PLANTS
ISOTOPE SEPARATION PLANTS
OXYGEN PLANTS
PETROLEUM REFINERIES
Air Pollution
Impact of urban and industrial emissions on mesoscale precipitation quality, 12:48363 (R;US)
Boilers
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
Design, fabrication and testing of an advanced cyclone coal combustor of an industrial boiler, using coal slurries as a fuel: Phase 2, Combustor installation and test: Final report, June 3, 1985 to June 15, 1987, 12:48154 (R;US)
Energy Conservation
Effect of new cooking methods on the optimization of the energy consumption of the sulphate pulp mill, 12:47698 (R;FI;In Finnish)
Energy Consumption
Effect of new cooking methods on the optimization of the energy consumption of the sulphate pulp mill, 12:47698 (R;FI;In Finnish)
Energy Supplies
Cooperation in the energy field between industry and population centers, 12:47697 (R;FI;In Finnish)
Heaters
Assessment of non-traditional uses of advanced coal utilization technologies in the industrial sector: Final report, 12:47340 (R;US)
Monitoring
Laser monitors for trace species in environmental and industrial processes, 12:48125 (BA;US)
Process Development Units
Effect of new cooking methods on the optimization of the energy consumption of the sulphate pulp mill, 12:47698 (R;FI;In Finnish)
Waste Heat Utilization
Cooperation in the energy field between industry and population centers, 12:47697 (R;FI;In Finnish)
Waste Management
Hazardous waste management strategy in Illinois: Government's role, 12:47707 (BA;US)
INDUSTRIAL SECTOR
See INDUSTRY
INDUSTRIAL WASTES
Hazardous Materials
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)
INDUSTRY

Energy Expenses
Effects of energy tax reforms on the production process, 12:47579 (R;FI;In Finnish)
Heating Systems
Group heating plants for industrial heating applications. Alternative heat production systems and potential for oil substitution, 12:47668 (R;SE;In Swedish)
Taxes
Effects of energy tax reforms on the production process, 12:47579 (R;FI;In Finnish)
INFORMATION RETRIEVAL
Standardized Terminology
Energy Data Base: Subject Thesaurus, 12:49225 (R;US)
INFORMATION SYSTEMS
Implementing and managing change: A guide for assessing information technology (Office automation), 12:49228 (R;US)

Technology Impacts
The impact of information technology on research in science and engineering, 12:49224 (R;US)

INFRARED SPECTROMETERS
Configuration
Detector arrays for low-background space infrared astronomy, 12:48286 (R;US)
Using SIRTF to study extragalactic star formation, 12:48285 (RA;US)
Research Programs
[The development of a new and novel Hadamard transform infrared spectrometer for analytical chemistry]: Progress report, May 15, 1985-now, 12:48278 (R;US)
Reviews
Detector arrays for low-background space infrared astronomy, 12:48286 (R;US)

INHALATION EXPOSURE CHAMBERS
See EXPOSURE CHAMBERS

INHIBITORS (ENZYME)
See ENZYME INHIBITORS

INHOMOGENEOUS PLASMA
Electromagnetic Radiation
Stationary regime of s-polarized electromagnetic wave reflection from one-dimensional drop of plasma density, 12:49071 (RA;SU;In Russian)

INORGANIC COMPOUNDS
Use of a more specific term is recommended.
Removal
A study of micellar-enhanced ultrafiltration: Final technical report, March 1, 1984-February 28, 1987, 12:48424 (R;US)

IN-SITU GASIFICATION
Field Tests
Final report on the toxicological testing of groundwaters affected by underground coal gasification, 12:47015 (R;US)
Review of toxicity studies performed on an underground coal gasification condensate water, 12:47016 (R;US)
Waste Water
Review of toxicity studies performed on an underground coal gasification condensate water, 12:47016 (R;US)
Water Pollution
Final report on the toxicological testing of groundwaters affected by underground coal gasification, 12:47015 (R;US)

INSOLATION
Computerized Simulation
A quasi-physical model for converting hourly global horizontal to direct normal insolation, 12:47296 (R;US)

INSTRUMENTS (MEASURING)
See MEASURING INSTRUMENTS

INSULATION (THERMAL)
See THERMAL INSULATION

INTEGRAL DOSES
Computer Calculations
Radiation hygiene analysis of medical activities in Norway. Development of an analytical tool, 12:48987 (R;NO;In Norwegian)
Radiation hygiene analysis of medical activities in Norway. Integral dose: A basis of X-ray examination consequence calculations, 12:48476 (R;NO;In Norwegian)

INTEGRATED CIRCUITS
Report of the workshop on transferring X-ray Lithography Synchrotron (XLS) technology to industry, 12:48172 (R;US)
Design
Diagnostics and microelectronics engineering, 12:48149 (RA;US)
Etching
Diagnostics and microelectronics engineering, 12:48149 (RA;US)
Testing
Diagnostics and microelectronics engineering, 12:48149 (RA;US)

INTERACTING BOSON MODEL
Microscopic foundation of the interacting boson model, 12:48928 (RA;SU)
Collective Model
Boson models of quadrupole collective motion. New about old, 12:48929 (RA;SU;In Russian)
Mean-Field Theory
Mean field techniques in the interacting boson model, 12:48930 (RA;SU)
Projection Operators
Mean field techniques in the interacting boson model, 12:48930 (RA;SU)

INTERFEROMETERS

Collective Excitations
Equation of motion method to describe quasiparticle structures in transitional and deformed nuclei, 12:48932 (RA;SU)
Giant Resonance
Experimental investigation of single-particle modes at high excitation energy, 12:48873 (RA;SU)
Particle Production
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Photonuclear Reactions
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Pion Reactions
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Proton Reactions
Radiative capture of protons by medium nuclei and γ-ray strength functions, 12:48937 (RA;SU)
Strength Functions
Experimental investigation of single-particle modes at high excitation energy, 12:48873 (RA;SU)
Radiative capture of protons by medium nuclei and γ-ray strength functions, 12:48937 (RA;SU)

INTERMEDIATE VECTOR BOSONS
See also W MINUS BOSONS
W PLUS BOSONS
Z NEUTRAL BOSONS
Particle Decay
Recent results on jet-physics and QCD tests by UA1 and UA2 at the CERN proton-antiproton collider, 12:48767 (R;FR)

INTERMEDIATE-LEVEL RADIOACTIVE WASTES
Radioactive Waste Disposal
Use and disposal of radioisotopes in non-nuclear fields, 12:47220 (RA;CS;In Czech)

INTERMETALLIC COMPOUNDS
Atomic Radii
Relativistic screened orbital radii, 12:49001 (J;US)
Chemical Bonds
A bonding model for strong generalized Lewis acid-base interactions in intermetallics, 12:47989 (R;US)

Formation Heat
Modelling and theories of alloy phase behavior, 12:47808 (R;US)
Phase Studies
Modelling and theories of alloy phase behavior, 12:47808 (R;US)
INTERNAL COMBUSTION ENGINES
See also DIESEL ENGINES
ROTARY ENGINES
Chemical Reactions
Numerical simulation of internal combustion engine flows: Development and users guide for MAGIC radial-azimuthal version, 12:47714 (R;US)
M Codes
Numerical simulation of internal combustion engine flows: Development and users guide for MAGIC radial-azimuthal version, 12:47714 (R;US)
INTERPLANETARY MAGNETIC FIELDS
Configuration
Studies of the interplanetary magnetic field: IMP's to Voyager, 12:48563 (RA;US)
Disturbances
Studies of the interplanetary magnetic field: IMP's to Voyager, 12:48563 (RA;US)
INTERPLANETARY SPACE
Energy Sources
Energy source of the interplanetary medium and the heliosphere, 12:48561 (RA;US)
INTERSTELLAR SPACE
Intermediate Mass Nuclei
Nucleosynthesis and astrophysical gamma ray spectroscopy, 12:48569 (RA;US)
Nucleosynthesis
Nucleosynthesis and astrophysical gamma ray spectroscopy, 12:48569 (RA;US)
Point Sources
What are cirrus point sources?, 12:48652 (RA;US)
INVERSE SCATTERING PROBLEM
Three-Dimensional Calculations
Self-consistent equations for variable velocity three-dimensional inverse scattering, 12:49047 (J;US)
INVERTERS
Design
GTO based inverter for a 60-kW variable reluctance motor drive for electric vehicle propulsion, 12:47743 (RA;US)
INVESTMENT
Appraisal
Investment appraisal in reservoir economics, 12:47146 (R;NO)
IODIDES
See also CESIUM IODIDES
Aqueous Solutions
Measurements of rates of some reactions related to radiolytic effect on aqueous iodide solution, 12:47526 (RA;US)
Chemical Reactions
Interaction of caesium iodide with boric acid under severe reactor accident conditions, 12:47519 (RA;US)
Iodine behavior in containment under LWR accident conditions, 12:47518 (RA;US)
The Formation of organic iodides following reactor accidents, 12:47524 (RA;US)
Chemical State
Capture of iodine in pressurized water reactor ice condensers, 12:47522 (RA;US)
Fission Products
The chemistry of fission product iodine under nuclear reactor accident conditions, 12:47516 (RA;US)
Phase Studies
The Formation of organic iodides following reactor accidents, 12:47524 (RA;US)
Radiation Doses
Iodine behavior in containment under LWR accident conditions, 12:47518 (RA;US)
Radiolysis
Measurements of rates of some reactions related to radiolytic effect on aqueous iodide solution, 12:47526 (RA;US)
Source Terms
Capture of iodine in pressurized water reactor ice condensers, 12:47522 (RA;US)
Transpiration
Interaction of caesium iodide with boric acid under severe reactor accident conditions, 12:47519 (RA;US)
IODINE
Adsorption
Studies on the adsorption behavior of elemental iodine at selected materials, 12:48145 (RA;DD;In German)
Aerosols
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:47521 (RA;US)
Aqueous Solutions
Experimental study of radiolytic effect on dilute aqueous iodide solution, 12:47525 (RA;US)
Measurements of rates of some reactions related to radiolytic effect on aqueous iodide solution, 12:47526 (RA;US)
Chemical Reaction Kinetics
Analysis of iodine chemical form for the severe fuel damage scoping test and 1-1 test, 12:47520 (RA;US)
Chemical Reactions
Interaction of caesium iodide with boric acid under severe reactor accident conditions, 12:47519 (RA;US)
Iodine behavior in containment under LWR accident conditions, 12:47518 (RA;US)
Iodine chemical reactions considered in German PWR core-melt accident risk evaluation, 12:47517 (RA;US)
The Formation of organic iodides following reactor accidents, 12:47524 (RA;US)
Chemical State
Capture of iodine in pressurized water reactor ice condensers, 12:47522 (RA;US)
Fission Products
Experimental study of radiolytic effect on dilute aqueous iodide solution, 12:47525 (RA;US)
The chemistry of fission product iodine under nuclear reactor accident conditions, 12:47516 (RA;US)
Phase Studies
The Formation of organic iodides following reactor accidents, 12:47524 (RA;US)
Radiation Doses
Iodine behavior in containment under LWR accident conditions, 12:47518 (RA;US)
Radiolysis
Experimental study of radiolytic effect on dilute aqueous iodide solution, 12:47525 (RA;US)
Measurements of rates of some reactions related to radiolytic effect on aqueous iodide solution, 12:47526 (RA;US)
Reactor Accidents
The chemistry of fission product iodine under nuclear reactor accident conditions, 12:47516 (RA;US)
Source Terms
Capture of iodine in pressurized water reactor ice condensers, 12:47522 (RA;US)
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:47521 (RA;US)
Vapors
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:47521 (RA;US)
IODINE 123
Isotope Production
Design of a fully automated, in-beam, continuous-flow I-123 production system, 12:47252 (J;GB)
Studies on the stability of tellurium dioxide targets under irradiation with deuterons, 12:48043 (RA;DD;In German)
Isotopic Exchange
Comparison of new Tc-99m-compounds with I-131 (123) renal radiopharmaceuticals, 12:48034 (RA;ZA)
IODINE 125
Isotopic Exchange
Development of a labelling procedure for preparing [/sup 125/I]-o-iodohippurate, 12:48057 (RA;DD;In German)

IODINE 129
Radioecological Concentration
Real time air assay of radionuclides by cryogenics, 12:48395 (RA;US)
IODINE 131
Isotopic Exchange
Comparison of new Tc-99m-compounds with I-131 (123) renal radiopharmaceuticals, 12:48034 (RA;ZA)
Radiation Monitoring
Methods and instrumentation for monitoring airborne radioactivity, 12:48394 (RA;US)
Radioecological Concentration
Real time air assay of radionuclides by cryogenics, 12:48395 (RA;US)
IODINE IODIDES

Collisions
Ion-dipolar molecule rate coefficients, 12:48698 (R;GB)
IOTA-1440 RESONANCES
Mixing of radial excitations of pseudoscalar isosinglets and possible nature of eta(1275) and iota(1440), 12:48804 (RA;SU;In Russian)
Particle Production
New results on the E(1420)/iota(1460) meson in hadroproduction, 12:48772 (BA;US)
IRIDIUM
Ion Microscopy
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)
Surface Properties
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)
IRIDIUM 191
Absorption
Osmium-191/iridium-191M radionuclide, 12:48082 (P;US)
IRON
See also IRON-ALPHA
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Carburization
Direct reduction by the rotary-kiln method, 12:47103 (R;XE;In German)
Catalytic Effects
Development and process evaluation of improved Fischer-Tropsch slurry catalysts: Quarterly technical progress report for the period 1 January to 31 March 1987, 12:47260 (R;US)

Crystal Structure
Impurities and defects in transition metals and their oxides, 12:47816 (RA;US)
Electrochemical Corrosion
The corrosion of iron rotating hemispheres in 1 M sulfuric acid: An electrochemical impedance study, 12:47827 (R;US)
Electron Reactions
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
Electronic Structure
Impurities and defects in transition metals and their oxides, 12:47816 (RA;US)
Energy Levels
Two magnetically different, closely lying states of fcc iron grown on copper (100), 12:47848 (J;US)
Ferromagnetism
Two magnetically different, closely lying states of fcc iron grown on copper (100), 12:47848 (J;US)
Magnetic Properties
Impurities and defects in transition metals and their oxides, 12:47816 (RA;US)
Physical Radiation Effects
Collapse of defect cascades to dislocation loops, 12:47851 (J;NL)
Quantitative Chemical Analysis
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Reduction
Direct reduction by the rotary-kiln method, 12:47103 (R;XE;In German)
Influence of radial distribution of burden in blast furnaces on the radial pattern of reduction of pig iron elements: experimental investigation using laboratory techniques, 12:47037 (R;XE;In Italian)
Smelting
Direct reduction by the rotary-kiln method, 12:47103 (R;XE;In German)

IRON 54 TARGET
Neutron Reactions
Exciton cascade model for fast neutron reactions, 12:48906 (R;XA)

IRON 56 TARGET
Electron Reactions
Inclusive charge longitudinal response in finite nuclei, 12:48954 (R;FR)
Neutron Reactions
Exciton cascade model for fast neutron reactions, 12:48906 (R;XA)
Response Functions
Inclusive charge longitudinal response in finite nuclei, 12:48954 (R;FR)

IRON ALLOYS
See also INCONEL 600
Fatigue
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Microstructure
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Weldability
The role of composition and microstructure gradients on weld metal properties and behavior, 12:47835 (RA;US)

IRON CHLORIDES
Magnetic Properties
Neutron diffraction of the field induced magnetism in CsFeCl/sub 3/: Statics and dynamics of an incommensurate magnetic structure, 12:47898 (R;DE;In German)

IRON COMPLEXES

IRON SULFIDES
Electrical Properties
A new technique for improving voltage regulation in Li/FeS/sub 2/ thermal batteries, 12:47572 (BA;US)

IRON-ALPHA
Physical Radiation Effects
Dissolution of nitride precipitates in iron by low-dose neutron irradiation, 12:47852 (J;GB)

IRON-NICKEL BATTERIES
Battery Charging
Battery charges since EVS-5, 1978, 12:47740 (RA;US)
Design
Design and performance of the NIF-170-5 nickel iron battery, 12:47723 (RA;US)
Performance Testing
Design and performance of the NIF-170-5 nickel iron battery, 12:47723 (RA;US)
Nickel-iron battery thermal behavior during operational utilization on electric vehicle, 12:47782 (RA;US)

Temperature effects on nickel/iron battery characteristics, 12:47722 (RA;US)
Research Programs
Worldwide nickel/iron battery development for electric vehicle applications, 12:47724 (RA;US)
Technology Assessment
Worldwide nickel/iron battery development for electric vehicle applications, 12:47724 (RA;US)
Temperature Effects
Temperature effects on nickel/iron battery characteristics, 12:47722 (RA;US)

IRRADIATION
Leading Abstract
Progress of the Institute of Nuclear Research, Rez in the field of radiochemical and irradiation technology, 12:48036 (R;CS)

IRRADIATION DEVICES
Radiation technologies in the Nuclear Research Institute, 12:48030 (RA;CS)

IRRADIATION RIGS
See IRRADIATION DEVICES

IRRIGATION
Energy Conservation
Turning over new ground: An impact evaluation of an irrigated agriculture program, 12:47704 (R;US)
Pumps
Stirling engines and irrigation pumping, 12:48166 (R;US)

ISING MODEL
Computerized Simulation
Monte Carlo simulation of modulated phases, 12:47824 (R;US)

ISOBARIC SPIN
See ISOSPIN

ISOBARS (NUCLEON)
*See N*RESONANCES*

ISOCYANATES
Chemical Analysis
Evaluation of a coated-filter sampling method for the determination of isocyanate concentrations in air, 12:48341 (R;US)

ISOSPIN
Random Phase Approximation
RPA spin-isospin nuclear response in the deep inelastic region, 12:48952 (R;FR)

ISOTOPE PRODUCTION
Annual Report 1985. Radioisotope Department, 12:48037 (R;DD;In German)
Isotope production in the year 1984, 12:48038 (RA;DD;In German)

ISOTOPE SEPARATION PLANTS
Performance
INS gas-filled recoil isotope separator, 12:47249 (R;JP)
Radiation Protection
New limits and conditions for the safe operation of the AMOR-1 facility for the fission molybdenum production in Rossendorf, 12:48988 (RA;DD;In German)

ISOTOPIC SPIN
See ISOSPIN

J

J-3105 RESONANCES
See PSI-3105 RESONANCES

JAPAN
International Cooperation
US-Japan Cooperative Program on neutron scattering, 12:48973 (R;US)

JAPANESE ORGANIZATIONS
Research Programs
Annual report of the Tandem Accelerator Center, University of Tsukuba, April 1, 1985-March 31, 1986, 12:49162 (R;JP)

JET ENGINE FUELS
Mass Spectroscopy
Analysis of middle-distillate fuels by high-resolution field-ionization mass spectrometry. Annual report (Final), 1 June 1982-November 1986, 12:47139 (R;US)
Pathogenesis
Effect of 2,3,4-trimethylpentane on the ultrastructure of kidneys from normal versus castrated male rats, 12:48522 (R;US)

JET REACTORS
See JET TOKAMAK

JET TOKAMAK
Comparative Evaluations
Relative merits of size, field, and current on ignited tokamak performance: A comparison of "CITs" and "Super-JETs", 12:49138 (R;US)

JETS
Performance Testing
Effects of high-pressure water jets on the performance of boom-type tunnelling machines, 12:47076 (R;XE)
Rock cutting by means of picks assisted by high-pressure water jets, 12:47075 (R;XE;In French)

JIPPT-2 DEVICE
Control Systems
Low power level control unit of high power amplifiers for ICRF heating experiment in JIPP T-IIU tokamak, 12:49134 (R;JP;In Japanese)
ICR Heating
ICRF current drive experiment on JIPP T-IIU, 12:49133 (R;JP)
Plasma Diagnostics
Data processing with PC-9801 micro-computer for HCN laser scattering experiments, 12:49082 (R;JP;In Japanese)
Observations of the asymmetric power spectra of the density fluctuations in JIPP T-IIU plasma by the far-infrared laser scattering, 12:49080 (R;JP)
Plasma Microinstabilities
Observations of the asymmetric power spectra of the density fluctuations in JIPP T-IIU plasma by the far-infrared laser scattering, 12:49080 (R;JP)
RF Systems
Low power level control unit of high power amplifiers for ICRF heating experiment in JIPP T-IIU tokamak, 12:49134 (R;JP;In Japanese)

JOB TRAINING
See TRAINING

JOSEPHSON JUNCTIONS
Mathematical Models
Macroscopic quantum effects in the zero voltage state of the current biased Josephson junction, 12:48108 (BA;US)
Noise
Nonlinear effects of noise on parametric amplification: An analysis of noise rise in Josephson junctions and other systems, 12:48105 (J;US)
Quantum Mechanics
Macroscopic quantum effects in the zero voltage state of the current biased Josephson junction, 12:48108 (BA;US)
Tunnel Effect
Macroscopic quantum effects in the zero voltage state of the current biased Josephson junction, 12:48108 (BA;US)

3J-SYMBOLS

K-892 RESONANCES
Particle Decay
Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers, 12:48755 (R;SU;In Russian)
Study on the inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons in quark jet of ν-barN interaction of charged current, 12:48759 (R;SU;In Russian)
Particle Production
Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers, 12:48755 (R;SU;In Russian)
Inclusive production of rho/sup 0/ and K/sup *0/ mesons in the ν-bar/sub μ/N charged-current interactions, 12:48758 (R;SU;In Russian)
Study on the inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons in quark jet of ν-barN interaction of charged current, 12:48759 (R;SU;In Russian)
KAON MINUS-PROTON INTERACTIONS
Study on the multiple pion production in the nondiffraction exclusive K/sup -/p interactions at 32.1 Gev/c, 12:48754 (R;SU;In Russian)
KAON PLUS REACTIONS
EMC Effect
K^+ as a probe of partial deconfinement in nuclei, 12:48967 (J;US)
Phase Shift
K^+ as a probe of partial deconfinement in nuclei, 12:48967 (J;US)
KAONS
See also KAONS NEUTRAL
Mass Formulae
Meson mass spectrum in generalized quark field model, 12:48792 (R;SU)
Particle Identification
System of gas Cherenkov counters for kaons identification in high intensity beams, 12:48234 (R;SU;In Russian)
Particle Production
Unique algorithm for calculation of inclusive cross sections of particle production with big transverse momenta and of cumulative type hadrons, 12:48798 (RA;SU;In Russian)
Weak Hadronic Decay
On the s->d self energy transition —α/sub s/ G/sub F/ and the relevance for the $\Delta I = 1/2$ and ϵ'/ϵ puzzles, 12:48828 (R;NO)
KAONS 1
See KAONS NEUTRAL SHORT-LIVED
KAONS 2
See KAONS NEUTRAL LONG-LIVED
KAONS NEUTRAL
See also KAONS NEUTRAL LONG-LIVED
KAONS NEUTRAL SHORT-LIVED
Configuration Mixing
ϵ'/ϵ from the lattice, 12:48832 (J;NL)
Particle Production
Neutral strange particle production in neutrino interactions of charged current at energy of 3-30 GeV, 12:48757 (R;SU;In Russian)
KAONS NEUTRAL LONG-LIVED
Radiative Decay
Decay of K/sub S//sup 0/ -> $\gamma\gamma$ in the chiral theory, 12:48800 (RA;SU;In Russian)
KAONS NEUTRAL SHORT-LIVED
Decay Amplitudes
Self-energy operator of the d-s transition and the K/sub s/ -> 2π decays, 12:48818 (R;SU)
Hadronic Particle Decay
Self-energy operator of the d-s transition and the K/sub s/ -> 2π decays, 12:48818 (R;SU)
Radiative Decay
Decay of K/sub S//sup 0/ -> $\gamma\gamma$ in the chiral theory, 12:48800 (RA;SU;In Russian)
KERMA
Specific kerma equivalent for photons and neutrons up to 20 MeV, 12:48980 (R;SU;In Russian)
KEROGEN
Pyrolysis
Tandem mass spectrometric analyses of geoporphyrins isolated from oil shale kerogen, 12:47186 (BA;US)
KEROSENE
Fuel Additives
Antimisting fuel (AMK) flight degrader development and aircraft-fuel-system investigation. Final report, March 1983-December 1985, 12:47141 (R;US)
Health Hazards
Indoor exposure assessment, 12:48325 (RA;US)
KETONES
See also ACETONE
PROGESTERONE
Labelling
Synthesis of [1-/sup 14/C]butane-2-on, 12:48060 (RA;DD;In German)
KETOPROPIONIC ACID-ALPHA
See PYRUVIC ACID
KGRA
See also KLAMATH FALLS
Monitoring
Coso Monitoring Program. Summary report, October 1985-September 1986, 12:47326 (R;US)
KILNS
Fuel Substitution
Use of domestic fuels in kraft pulp mill lime kilns, 12:47701 (R;FI;In Finnish)
KLAMATH FALLS
Geothermal Systems
Heat and mass transfer in the Klamath Falls, Oregon, geothermal system, 12:47328 (R;US)
KLYSTRONS
Equipment Protection Devices
Development of a high-energy crowbar for the Los Alamos free-electron laser, 12:48115 (R;US)
KNOCK-ON ELECTRONS
See ELECTRONS
KNOCK-OUT REACTIONS
Cross Sections
On a calculation of nucleon knock-out cross sections in a collision of relativistic nuclei, 12:48907 (RA;SU;In Russian)
KNOWN GEOTHERMAL RESOURCE AREA
See KGRA
K*RESONANCES
Mass Formulae
Meson mass spectrum in generalized quark field model, 12:48792 (R;SU)
KRSKO REACTOR
Krsko, Yugoslavia
Reactor Operation
Operating experience gained with the Krsko nuclear power plant, 12:47419 (RA;DE;In German)
KRYPTON
Electronic Structure
Nonlocal correlation function G(1,2) in density functional theory, 12:47958 (RA;US)
KRYPTON 85
Radioecological Concentration
Real time air assay of radionuclides by cryogenics, 12:48395 (RA;US)
KRYPTON FLUORIDE LASERS
Gain
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)
Laser Mirrors
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)
Modulation
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)
Operation
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)

L

LA SALLE COUNTY-1 REACTOR
Seismic Effects
Reliability data required for a seismic risk assessment, 12:47551 (BA;DE)
LABELLED COMPOUNDS
Compounds labelled with either stable or radioactive isotopes.
See also CARBON 14 COMPOUNDS
RADIOPHARMACEUTICALS
TRITIUM COMPOUNDS
Chemical Analysis
Comparative studies between paperelectrophoresis (PEP), paperchromatography (PC) and thin layer chromatography (TLC) for the determination of the radiochemical purity of [/sup 131/I]NaI and [/sup 131/I]o-iodo hippuric acid, 12:48069 (RA;DD)
Comparative studies of FN-1 and Whatman-4 chromatographic papers for the determination of the radiochemical purity of [/sup 131/I]o-iodohippurate and [/sup 125/I]o-iodohippurate, 12:48070 (RA;DD;In German)
HPLC of radiolabelled compounds in extreme low concentration ranges, 12:48073 (RA;DD;In German)
Chemical Preparation
Development of a labelling procedure for preparing [/sup 125/I]-o-iodohippurate, 12:48057 (RA;DD;In German)
Impurities
Development of a labelling procedure for preparing [/sup 125/I]-o-iodohippurate, 12:48057 (RA;DD;In German)
Stability
Physico-chemical properties of lanthanoid-albumin complexes, 12:48075 (RA;DD;In German)
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
Synthesis
Reactivity of heteroatom-containing organics during liquefaction of subbituminous coal: Quarterly technical progress report, June 15, 1987-September 15, 1987, 12:47021 (R;US)
LABORATORY BUILDINGS
Radiation Monitoring
Design and assessment of a personal monitor to optimize the occupational monitoring in plutonium laboratories, 12:48388 (RA;US)
LABYRINTH
See AUDITORY ORGANS
LACRIMAL DUCTS
Autoradiography
Autoradiographic and cytochemical studies on the intracellular transport of secreted proteins in the lacrimal ducts (glandula extraorbitalis) of the rat, 12:48489 (R;DE;In German)
LACTATION
Infectious Diseases
Effects of various forms of mastitis, in the progesterone concentrations of cow milk and milk fat, as determined by RIA and EIA, 12:48469 (R;DE;In German)
LAKE MICHIGAN
Aquatic Ecosystems
General review of major species and community dynamics in the Great Lakes, 12:48419 (RA;US)
LAKES

LANTHANUM 139 REACTIONS
Heavy Ion Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
LANTHANUM ALLOYS
Chemical Reaction Kinetics
Effect of methane on the rate of hydrogen absorption by $LaNi_5H$/sub x/ in liquid suspension, 12:47257 (J;CH)
Hydridation
Kinetics of the absorption of hydrogen by $LaNi_5H$/sub x/ suspended in aqueous solutions, 12:47258 (J;CH)
Hydrogen Storage
Effect of methane on the rate of hydrogen absorption by $LaNi_5H$/sub x/ in liquid suspension, 12:47257 (J;CH)
Kinetics of the absorption of hydrogen by $LaNi_5H$/sub x/ suspended in aqueous solutions, 12:47258 (J;CH)
LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM OXIDES
LANTHANUM COMPLEXES
Dissociation
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2i$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
Photochemical Reactions
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2^+$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
LANTHANUM COMPOUNDS
See also LANTHANUM OXIDES
Catalytic Effects
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study ($LaMO_3$(M = Cr, Mn, Fe, Co, Rh)), 12:47990 (R;US)
Sorptive Properties
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study ($LaMO_3$(M = Cr, Mn, Fe, Co, Rh)), 12:47990 (R;US)
LANTHANUM OXIDES
Crystal Structure
Structure-property relationships for RBa_2Cu_3/O/sub x/ phases (R = Y, La, Nd, Er), 12:47855 (R;US)
Fabrication
Shock-induced chemical synthesis of phases similar to the high temperature superconductor oxides ((La-Sr-Cu-O) and (Y-Ba-Cu-O)), 12:47862 (R;US)
Impurities
Effect of magnetic impurities on high-temperature superconductivity in La/sub 1.85/Sr/sub 0.15/CuO_4, 12:47867 (J;US)
Specific Heat
Specific heat of the high T/sub c/ superconductors $(La,M)_2CuO_4$ and $YBa_2Cu_3O_7$ in magnetic fields (M = Ca,Sr), 12:47859 (R;US)
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Thermal Expansion
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Transition Temperature
Effect of magnetic impurities on high-temperature superconductivity in La/sub 1.85/Sr/sub 0.15/CuO_4, 12:47867 (J;US)
LASER CAVITIES
Lenses
Diode lasers with cylindrical mirror facets and reduced beam divergence, 12:48109 (R;US)
Optical Modes
Observation of eigenmodes in index-guided arrays by injection seeding, 12:48122 (BA;US)
LASER FUSION REACTORS
Operation
A fusion reactor for space applications, 12:49148 (J;US)
Research Programs
LLE [Laboratory for Laser Energetics] review, Volume 31: Quarterly report, April-June 1987, 12:49127 (R;US)
LASER MATERIALS
Quantum Efficiency
Operation of Ho:YAG at intermediate temperatures, 12:48119 (BA;US)
LASER RADIATION
Amplification
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)
Modulation
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)
Observation of eigenmodes in index-guided arrays by injection seeding, 12:48122 (BA;US)
Physical Radiation Effects
High-damage-fluence laser glass for Nova, 12:48121 (BA;US)
Solgel coatings for high-power laser application, 12:48120 (BA;US)
Pulses
Generation of high-quality variable-duration KrF pulses by means of a phase-conjugate mirror, 12:48123 (BA;US)
Picosecond coherence time measurement with a double slit, 12:48117 (J;US)
LASER SPECTROSCOPY
See also RAMAN SPECTROSCOPY
Research Programs
Advanced laser-source research. Technical report (Final), 1 April 1978-31 March 1987, 12:48112 (R;US)
LASER TARGETS
Ablation
Time-resolved ablation measurements of imploding targets, 12:49124 (R;US)
Energy Absorption
Time-resolved absorption measurements on OMEGA, 12:49123 (R;US)
Heat Transfer
Effect of laser illumination nonuniformity on the analysis of time-resolved x-ray measurements in uv spherical transport experiments, 12:49145 (J;US)
Laser Implosions
Analytic model of an imploding Z-pinch plasma colliding inelastically with a thin-shelled cylindrical target, 12:49103 (R;US)
Laser-Radiation Heating
Production of atom flows at materials evaporation by laser radiation, 12:49085 (R;SU;In Russian)
LASER WELDING
Mass Transfer
Mass transfer during laser welding, 12:47834 (RA;US)
LASER-PRODUCED PLASMA
Plasma Diagnostics
Soft x-ray lasing in neonlike germanium and copper plasmas, 12:48118 (J;US)
Temperature Measurement
Time-resolved temperature and density measurements in ionizing, uniformly irradiated uv-laser-produced plasmas, 12:49126 (R;US)
Thomson Scattering
Enhanced Thomson scattering from laser plasmas, 12:49125 (R;US)
X-Ray Emission Analysis
X-ray emission from high-Z spherical laser plasmas: Implications for plasma dynamics, 12:49088 (R;US)

X-Ray Lasers
Soft x-ray lasing in neonlike germanium and copper plasmas, 12:48118 (J;US)

LASERS
Light Amplification by Stimulated Emission of Radiation.

See CRYSTAL DEFECTS

LATTICE FIELD THEORY

Lectures
Food for thought: Five lectures on lattice gauge theory, 12:48854 (R;US)

Monte Carlo Method
Monte Carlo renormalization group, 12:48858 (RA;US)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LAWRENCE BERKELEY LABORATORY

Data Transmission
Performance analysis of Ethernet, 12:49190 (RA;US)

LEACHATES

Ecological Concentration
Leaching studies of solid wastes generated from fluidized bed combustion of low-rank western coals, 12:47065 (BA;US)

Environmental Transport
Migration of hazardous substances through soil. Part 3. Flue-gas desulfurization and fly-ash wastes. Final report, December 1974-July 1977, 12:48403 (R;US)

LEAD

Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)

Deposition
An intensive short-term study of atmospheric lead deposition to a high-elevation spruce forest, 12:48315 (R;US)

Electronic Structure
Generalized Kohn-Sham theory for low-energy electron scattering by atoms including relativistic effects, 12:47959 (RA;US)

Ion-Atom Collisions
L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions, 12:48731 (J;US)

Oxygen 16 Reactions
Relativisitic heavy ion collisions, 12:48896 (R;US)

Particulates
Health-Hazard Evaluation Report HETA 86-070-1774, Silver Deer Spectrum, Boulder, Colorado, 12:48337 (R;US)

Quantitative Chemical Analysis
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)

LEAD 194

Alpha Decay
Nuclear structure effects on alpha reduced widths, 12:48889 (R;US)

LEAD 206

Nuclear Structure
Electron interactions with nuclei: Progress report, 12:48867 (R;US)

LEAD 208

Fragmentation
Excited nuclei fragmentation, 12:48901 (R;FR;In French)

LEAD 208 TARGET

Antiproton Reactions
Calculation of reaction cross sections and scattering amplitude at the zero angle for nucleons and antinucleons of mean energies on nuclei, 12:48909 (RA;SU;In Russian)

Proton Reactions
Calculation of reaction cross sections and scattering amplitude at the zero angle for nucleons and antinucleons of mean energies on nuclei, 12:48909 (RA;SU;In Russian)

LEAD 210

Sediments
Budgets and behaviours of uranium and thorium series isotopes in Santa Monica Basin sediments, 12:48410 (J;US)

LEAD 212

Isotope Production
Improved generator for the production and use of ^{212}Pb and ^{213}Bi, 12:48483 (J;GB)

LEAD ALLOYS

Electronic Structure
Band description of materials with localizing orbitals, 12:47858 (RA;US)

Magnetic Properties
Band description of materials with localizing orbitals, 12:47858 (RA;US)

LEAD-ACID BATTERIES

Charge State
Adaptive battery state-of-change indicator (ASCI) for urban driving, 12:47763 (RA;US)
Effect of depth-of-discharge on lead-acid battery overcharge requirements, 12:47738 (RA;US)
Mathematical model of a lead-acid traction battery, 12:47737 (RA;US)

Design
Test of a 500 kWh lead-acid battery for customer-side-of-the-meter applications, 12:47571 (BA;US)

Performance
Mathematical model of a lead-acid traction battery, 12:47737 (RA;US)
Test of a 500 kWh lead-acid battery for customer-side-of-the-meter applications, 12:47571 (BA;US)

Performance Testing
Capacity and peak power degradation of lead-acid battery under simulated electric vehicle operations, 12:47739 (RA;US)
Effect of depth-of-discharge on lead-acid battery overcharge requirements, 12:47738 (RA;US)

Testing
Test of a 500 kWh lead-acid battery for customer-side-of-the-meter applications, 12:47571 (BA;US)

LEAK TESTING

Containers
Investigations of leakage behaviour of big containers and devices, 12:48096 (R;DE;In German)

Containment
Investigations of leakage behaviour of big containers and devices, 12:48096 (R;DE;In German)

LEPTON REACTIONS
See also ELECTRON REACTIONS
MUON REACTIONS
NEUTRINO REACTIONS

Inelastic Scattering
Charge form factors and quark clusters, 12:48837 (J;US)

LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
LEPTON REACTIONS

LEUCINE

Labelling
Synthesis of dl-dehydro leucine and dl-dehydro leucine hydrochloride, 12:48062 (RA;DD;In German)

LIBYA

Petroleum Deposits
Mixed fluvial systems of Messak Sandstone, a deposit of Nubian lithofacies, southwestern Libya, 12:47130 (J;US)

LIGHT BULBS

Calibration Standards
Deuterium lamps as transfer standards for spectral radiance measurements, 12:48279 (R;FR)

LIGHT GUIDES
See OPTICAL FIBERS
LIGHT NUCLEI
For nuclei with mass 1-40.

SILICON 29
TRITIUM
Electron Reactions
Electromagnetic meson production, 12:48877 (J;US)
Form Factors
Charge form factors and quark clusters, 12:48837 (J;US)
Hypernuclei
Electromagnetic meson production, 12:48877 (J;US)
Lepton Reactions
Charge form factors and quark clusters, 12:48837 (J;US)
Particle Production
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Electromagnetic meson production, 12:48877 (J;US)
Photonuclear Reactions
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Electromagnetic meson production, 12:48877 (J;US)
Pion Reactions
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Proton Reactions
Charge form factors and quark clusters, 12:48837 (J;US)
LIGHT SCATTERING
Light scattering by oriented and randomly dispersed chiral particles, 12:49040 (R;US)
LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS
LIGHTNING
Simulation
Simulated and rocket-triggered lightning testing of the Lightning-Invulnerable Device System (LIDS), 12:48307 (RA;US)
LIGHTNING ARRESTERS
Testing
Simulated and rocket-triggered lightning testing of the Lightning-Invulnerable Device System (LIDS), 12:48307 (RA;US)
LIGNITE
Combustion Kinetics
Combustion of coal-water slurries, 12:47113 (J;GB)
LIMING
Environmental Effects
Forest liming on mineral soils. Results of Finnish experiments, 12:48422 (R;SE)
LINACS
See LINEAR ACCELERATORS
LINEAR ACCELERATORS
See also ATLAS SUPERCONDUCTING LINAC
LAMPF LINAC
QUADRUPOLE LINACS
SACLAY LINAC
STANFORD LINEAR COLLIDER
Beam Emittance
Preliminary design and beam-dynamics study of a funneling line having low emittance growth, 12:48196 (J;US)
Cost Estimation
Economics of induction linac drivers for radiation sources, 12:48177 (R;US)
Design
Economics of induction linac drivers for radiation sources, 12:48177 (R;US)
Focusing
Admissible errors of parameters of a focusing channel of an induction linac with intense electron beam. 1. Conditions for beam-focusing channel matching and envelope oscillations, 12:48190 (R;SU;In Russian)
Superlattices
Crystal x-ray accelerator, 12:48194 (J;US)
Uses
Economics of induction linac drivers for radiation sources, 12:48177 (R;US)
LINEAR PROGRAMMING
Algorithms
Aggregation and disaggregation in integer programming problems, 12:49169 (R;NO)
Strong cutting plane algorithm for an assignment problem with side constraints, 12:49170 (R;NO)
Performance Testing
An analysis of an available set of linear programming test problems, 12:49217 (R;US)
LIPOPROTEINS
Labelling
Radiohalogenated low-density-lipoprotein: potential agents for the visualization of atherosclerotic lesions, 12:48481 (J;GB)
LIQUEFIED NATURAL GAS
Storage
Analysis of crack propagation and arrest in welded LNG (liquefied natural gas) storage tanks. Final report, March 1984-October 1986, 12:47180 (R;US)
LIQUID CRYSTALS
Microstructure
New theory for competing interactions and microstructures in partially-ordered (liquid-crystalline) phases, 12:48997 (R;US)
Phase Transformations
New theory for competing interactions and microstructures in partially-ordered (liquid-crystalline) phases, 12:48997 (R;US)
LIQUID EFFLUENTS
See LIQUID WASTES
LIQUID FUELS
See also FUEL OILS
GASOLINE
KEROSENE
Underground Storage
Managing underground-storage-tank data using dBASE III plus. Final report, 12:47588 (R;US)
LIQUID IONIZATION CHAMBERS
On possibility of detection of double beta decay by liquid ionization chambers, 12:48248 (R;SU;In Russian)
LIQUID METAL COOLANT
See LIQUID METALS
LIQUID METALS
Acoustic Measurements
Birch's law and the properties of high temperature fluid metals, 12:48999 (R;US)
Physical Properties
Birch's law and the properties of high temperature fluid metals, 12:48999 (R;US)
LIQUID WASTES
See also WASTE WATER
Organic Wastes
Evaluation of combustion processes for destruction of liquid organic wastes, GA Technologies, Incorporated, 12:48347 (R;US)
Underground Storage
Managing underground-storage-tank data using dBASE III plus. Final report, 12:47588 (R;US)
LIQUIDS
See also COAL LIQUIDS
LIQUID CRYSTALS
LIQUID METALS
Electrical Properties
Vacuum ultraviolet electronic properties of liquids: Annual progress report, February 1, 1987-January 31, 1988, 12:48993 (R;US)
Structure Factors
Fluids in micropores. I. Structure of a simple classical fluid in a slit-pore, 12:48407 (J;US)

Thermodynamic Properties
Thermophysical properties of fluids for the gas industry. Annual report, January-December 1986, 12:47177 (R;US)
LITHIUM
Chemical Reactions
Some safety considerations of liquid lithium as a fusion breeder material, 12:49132 (R;US)
Electrical Properties
A new technique for improving voltage regulation in Li/FeS/sub 2/ thermal batteries, 12:47572 (BA;US)
LITHIUM 6 REACTIONS
Charge-Exchange Reactions
Spin excitations in nuclei, 12:48936 (RA;SU;In Russian)
Scattering
Three-body coupled-channel theory of scattering and breakup of light and heavy ions, 12:48871 (R;JP)
LITHIUM 6 TARGET
Electron Reactions
Investigation of electrons with /sup 6/Li, /sup 9/Be, /sup 12/C, /sup 28/Si nuclei in the region of quasi-elastic peak and δ/sub 33/-resonace, 12:48868 (R;SU;In Russian)
LITHIUM 7 REACTIONS
Scattering
Three-body coupled-channel theory of scattering and breakup of light and heavy ions, 12:48871 (R;JP)
LITHIUM ALLOYS
Microstructure
Processing and superplasticity in lithium-containing Al-Mg alloys. Master's thesis, 12:47806 (R;US)
Tensile Properties
Tensile behavior of superplastic Al-Cu-Li-Zr alloy 2090 at cryogenic temperatures, 12:47826 (R;US)
The effect of strain rate on the yield behavior of iron-base LRO alloys at elevated temperatures ((Fe-Ni-V-Ti) alloy), 12:47815 (R;US)
LITHIUM FLUORIDES
Corrosive Effects
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)
Electron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Physical Radiation Effects
Role of Farben centers in electron- and photon-stimulated desorption from alkali halides, 12:47927 (J;US)
Positron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Thermodynamics
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)
LITHIUM-SULFUR BATTERIES
Cathodes
Inorganic electrolyte rechargeable Li/SO/sub 2/ system, 12:47569 (BA;US)
Design
Inorganic electrolyte rechargeable Li/SO/sub 2/ system, 12:47569 (BA;US)
Electrolytes
Inorganic electrolyte rechargeable Li/SO/sub 2/ system, 12:47569 (BA;US)
Performance
Inorganic electrolyte rechargeable Li/SO/sub 2/ system, 12:47569 (BA;US)
LIVER
Cell Cultures
Flow cytometric measurement of the metabolism of benzo [a] pyrene by mouse liver cells in culture, 12:48520 (BA;US)
Genetic Radiation Effects
Effects of separate and combined treatments with gamma radiation and diethylnitrosamine in neonatal rats on the induction of altered hepatocyte foci and hepatic tumors, 12:48518 (J;GB)
LMFBR TYPE REACTORS
See also BOR-60 REACTOR
EBR-2 REACTOR
Containment
Evaluation of the confinement option for LMRs, 12:47472 (R;US)
Reactor Accidents
Evaluation of the confinement option for LMRs, 12:47472 (R;US)
Reactor Instrumentation
The standard Harwell Carbon Meter: Revision, 12:47425 (R;GB)
Reactor Safety
Evaluation of the confinement option for LMRs, 12:47472 (R;US)
Fast reactor safety: the convergence of principles and practice, 12:47538 (J;US)
LNG
See LIQUEFIED NATURAL GAS
LOAD (DYNAMIC)
See DYNAMIC LOADS
LOAD MANAGEMENT
C Codes
Models of commercial sector equipment and fuel decisions for the COMMEND code: Framework design and data development plan: Final report, 12:47605 (R;US)
LOCA
See LOSS OF COOLANT
LOCAL GALAXY
See MILKY WAY
LOCAL GROUP
See GALAXIES
LOCOMOTIVES
Design
Proceedings of the seminar on the ergonomics of locomotives and free-steered vehicles, 12:47093 (R;GB)
Human Factors Engineering
Proceedings of the seminar on the ergonomics of locomotives and free-steered vehicles, 12:47093 (R;GB)
LOFT REACTOR
Monitoring
Results and interpretation of multivariate autoregressive analysis applied to the LOFT [Loss-of-Fuel Test] reactor process noise data, 12:47441 (R;US)
Reactor Noise
Results and interpretation of multivariate autoregressive analysis applied to the LOFT [Loss-of-Fuel Test] reactor process noise data, 12:47441 (R;US)
LOGIC (MATHEMATICS)
See MATHEMATICAL LOGIC
LONGITUDINAL PINCH
Spatial Distribution
Numerical solution of the problem on the structure of cylindric Z-pinch with consideration of the terms connected with thermoforce, 12:49083 (R;SU;In Russian)
LONGWALL MINING
Mining Equipment
Perfecting of maintenance and servicing systems for longwall face equipment, 12:47071 (R;XU)
Rock Mechanics
Investigation of yield zone development around longwall coal-faces, 12:47083 (R;XE)
Strata Control
Investigation of yield zone development around longwall coal-faces, 12:47083 (R;XE)
Stress Analysis
Investigation of yield zone development around longwall coal-faces, 12:47083 (R;XE)
LOOPS (IN PILE)
See IN PILE LOOPS
LORENTZ GAS
Transport Theory
Diffusion in a periodic Lorentz gas, 12:48979 (J;US)
LORENTZ PLASMA
See LORENTZ GAS
LOS ALAMOS MESON PHYSICS FACILITY
See LAMPF LINAC

LOSS OF COOLANT
Fission Products
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)
Radiation Transport
Severe accident behavior, 12:47484 (RA;US)
Radioactive Effluents
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part II, 12:47492 (RA;US)
Severe accident behavior, 12:47484 (RA;US)
Radioactivity Transport
Ex-plant consequence analysis: models, typical results, uncertainties, chemistry, 12:47485 (RA;US)
Radioisotopes
Severe accident behavior, 12:47484 (RA;US)
LOSS OF FLUID TEST REACTOR
See LOFT REACTOR
LOVIISA-1 REACTOR
Loviisa, Finland
Reactor Operation
Operation of Finnish nuclear power plants. 3. Quarterly report 1986, 12:47409 (R;FI)
LOVIISA-2 REACTOR
Loviisa, Finland
Reactor Operation
Operation of Finnish nuclear power plants. 3. Quarterly report 1986, 12:47409 (R;FI)
LOW-LEVEL RADIOACTIVE WASTES
Radioactive Waste Disposal
Characteristics of medically related low-level radioactive waste, 12:48467 (R;US)
Collection of lectures delivered at decontamination course, 12:47215 (R;CS;In Czech)
Disposal of radioactive wastes from radioisotope workplaces, 12:47222 (RA;CS;In Czech)
Low-level radioactive wastes resulting from medical activities: A nontechnical guide, 12:48466 (R;US)
Use and disposal of radioisotopes in non-nuclear fields, 12:47220 (RA;CS;In Czech)
Radioactive Waste Management
Plans and schedules for implementation of US Nuclear Regulatory Commission responsibilities under the Low-Level Radioactive Waste Policy Amendments Act of 1985 (P.L. 99-240), 12:47595 (R;US)
Underground Disposal
Greater-confinement disposal of low-level radioactive wastes, 12:47238 (BA;US)
Waste disposal by hydrofracture and application of the technology to the management of hazardous wastes, 12:47239 (BA;US)
LUMBER INDUSTRY
See WOOD PRODUCTS INDUSTRY
LUNGS
Radiation Doses
CNS cancers and radiation exposure: a case-control study among workers at two nuclear facilities, 12:48515 (J;US)
Radionuclide Kinetics
CNS cancers and radiation exposure: a case-control study among workers at two nuclear facilities, 12:48515 (J;US)
LUTETIUM
Beta Decay
Radioactivities with $146 \leqq A \leqq 152$ investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Proton Emission Decay
Radioactivities with $146 \leqq A \leqq 152$ investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
LUTETIUM COMPLEXES
Stability
Complex formation of lanthanoids with citrate ligands, 12:48077 (RA;DD;In German)
LWBR TYPE REACTORS
Reactivity Coefficients
Light Water Breeder Reactor (LWBR) flow coefficient of reactivity: (LWBR Development Program), 12:47535 (R;US)
Research Programs
Light Water Breeder Reactor (LWBR) flow coefficient of reactivity: (LWBR Development Program), 12:47535 (R;US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYMPHATIC SYSTEM
Radiation Injuries
Radiation injury to the canine thymus lymphohematopoietic stem cells - correlation with functional deficits. Technical report, 22 February 1984-30 November 1985, 12:48495 (R;US)
LYMPHOKINES
Biosynthesis
Study of the role of macrophages in the inhibition of erythropoiesis, 12:48451 (RA;US)

M

M CODES
[High energy experimental physics]: Progress report, 12:48749 (R;US)
MACERALS
Molecular Structure
Characterization of coal macerals by high-resolution supercritical fluid chromatography. Annual report, May 1986-April 1987, 12:47043 (R;US)
MACHINE TOOLS
Computerized Control Systems
Simplifying control system modeling using data scanning techniques, 12:48103 (R;US)
Data Analysis
Simplifying control system modeling using data scanning techniques, 12:48103 (R;US)
MACHINING
Controlled Atmospheres
Atmosphere-assisted machining of depleted-uranium (DU) penetrators. Final report, 12:47205 (R;US)
MACROPHAGES
Biological Functions
Study of the role of macrophages in the inhibition of erythropoiesis, 12:48451 (RA;US)
MAGELLANIC CLOUDS
H2 Regions
Infrared emission and excitation in LMC HII regions, 12:48605 (RA;US)
IRAS and ground-based observations of star formation regions in the Magellanic clouds, 12:48603 (RA;US)
Infrared Spectra
Infrared emission and excitation in LMC HII regions, 12:48605 (RA;US)
Star Evolution
IRAS and ground-based observations of star formation regions in the Magellanic clouds, 12:48603 (RA;US)
Star formation in the Magellanic clouds, 12:48595 (RA;US)
Star formation in the large Magellanic cloud, 12:48604 (RA;US)
MAGIC NUCLEI
Self-consistent description of magic nucleus properties by method of effective energetic functional of density, 12:48905 (R;SU;In Russian)
MAGIC NUMBERS
See MAGIC NUCLEI
MAGNESIUM
Electronic Structure
Direct calculation of excitation energies by the coupled-cluster method: Mg and Ar atoms, 12:47967 (RA;US)
MAGNESIUM ALLOYS
Microstructure
Processing and superplasticity in lithium-containing Al-Mg alloys. Master's thesis, 12:47806 (R;US)
MAGNESIUM COMPOUNDS
See also MAGNESIUM FLUORIDES
MAGNESIUM OXIDES
Electron Transfer
Complex scaled local density calculations: a review of recent developments, 12:47956 (RA;US)

Fracture Properties
Effect of ZrO_2 inclusions on fracture properties of $MgCr_2O_4$, 12:47873 (J;GB)
Molecular Structure
Complex scaled local density calculations: a review of recent developments, 12:47956 (RA;US)
Thermal Shock
Effect of ZrO_2 inclusions on fracture properties of $MgCr_2O_4$, 12:47873 (J;GB)

MAGNESIUM FLUORIDES
Corrosive Effects
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)
Particle Size
Laser diffraction particle size analysis of powders, 12:48280 (R;US)
Thermodynamics
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)

MAGNESIUM OXIDES
Absorption Spectra
Optical detection of a hydrogen complex responsible for the F phosphorescence in thermochemically reduced MgO crystals, 12:47864 (J;US)
Chemical Properties
High conductivity glass electrolytes for sodium/sulfur batteries, 12:47573 (BA;US)
Crystal Defects
Superhyperfine structure of the H/sup 2-/ ion in MgO, 12:47921 (J;US)
Enthalpy
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Entropy
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
F Centers
Optical detection of a hydrogen complex responsible for the F phosphorescence in thermochemically reduced MgO crystals, 12:47864 (J;US)
Fatigue
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)
Ionic Conductivity
High conductivity glass electrolytes for sodium/sulfur batteries, 12:47573 (BA;US)
Sorptive Properties
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Stress Analysis
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)
Surface Properties
Thermodynamics of two, two-dimensional phases formed by CO_2 chemisorption on MgO, 12:48009 (J;US)
Thermodynamic Properties
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)
Thermoluminescence
Optical detection of a hydrogen complex responsible for the F phosphorescence in thermochemically reduced MgO crystals, 12:47864 (J;US)

MAGNETIC BREMSSTRAHLUNG
See SYNCHROTRON RADIATION

MAGNETIC FIELDS
See also INTERPLANETARY MAGNETIC FIELDS
Health Hazards
Irradiation from video display terminals, 12:48534 (R;NO;In Norwegian)
Prenatal Exposure
Irradiation from video display terminals, 12:48534 (R;NO;In Norwegian)
Shear Properties
Saturation of Kelvin-Helmholtz fluctuations in a sheared magnetic field, 12:49060 (R;US)

MAGNETIC MIRRORS
Including systems with minimum-B configuration.
See also MFTF DEVICES
Plasma Confinement
Plasma confinement by a radio frequency plugging potential in an axisymmetric mirror-cusp device, 12:49077 (R;JP)

MAGNETIC MONOPOLES
Compactification
Monopoles as probes for extra dimensions, 12:48811 (R;JP)
Mass
Charge neutrality of atoms and magnetic monopoles, 12:48842 (J;US)

MAGNETIC SPECTROMETERS
Sigma spectrometer for investigation of π/sup -/-meson dissociation in μ/sup +/μ/sup -/π/sup -/ system on nuclei, 12:48235 (R;SU;In Russian)
Particle Tracks
Technique for track search for events recorded in the ITEP 6-meter spectrometer (MIS), 12:48254 (R;SU;In Russian)
Spark Chambers
Wide-aperture installation for study on multiparticle reactions, 12:48253 (R;SU;In Russian)
Wire Spark Chambers
Technique for track search for events recorded in the ITEP 6-meter spectrometer (MIS), 12:48254 (R;SU;In Russian)

MAGNETIC STORMS
Latitudinal motions of the aurora during substorm, 12:48537 (R;US)
Quadrennial review of the magnetotail, 12:48690 (R;US)
Solar-Geophysical Data Number 513, May 1987. Part 1 (prompt reports). Data for April, March 1987 and late data, 12:48683 (R;US)
Space Environment Laboratory annual report - FY 1986, October 1, 1985 to September 30, 1986, 12:48696 (R;US)

MAGNETOHYDRODYNAMIC CHANNELS
See MHD CHANNELS

MAGNETOHYDRODYNAMIC GENERATORS
See MHD GENERATORS

MAGNETOSPHERE
See EARTH MAGNETOSPHERE

MAGNETOTAIL
Energy Transfer
Quadrennial review of the magnetotail, 12:48690 (R;US)

MAHOGANY TREES
See TREES

MAINE
Coal Deposits
Relationship between peat geochemistry and depositional environments, Cranberry Island, Maine, 12:47069 (J;NL)

MAINTENANCE
Hazardous Materials
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)
Planning
Maintenance planning in district heating system, 12:47712 (R;SE;In Swedish)

MALIGNANCIES
See NEOPLASMS

MANGANESE ALLOYS
Fatigue
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Microstructure
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Neutron Diffraction
Polarization-analysis study of the atomic and spin-pair correlations in Ni/sub 0.76/Mn/sub 0.24/, 12:47845 (J;US)
Spin Glass State
Polarization-analysis study of the atomic and spin-pair correlations in Ni/sub 0.76/Mn/sub 0.24/, 12:47845 (J;US)

Weldability
The role of composition and microstructure gradients on weld metal properties and behavior, 12:47835 (RA;US)

MANGANESE COMPOUNDS
Electronic Structure
Electronic structure and magnetic behavior of UMn_2 and UFe_2, 12:47846 (J;US)

MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS

MANY-BODY PROBLEM
See also THREE-BODY PROBLEM
TWO-BODY PROBLEM
Calculation Methods
Many-dimensional hydrogenlike wave functions and the quantum mechanical many-body problem, 12:47950 (RA;US)
Hamiltonians
Comments on the method of complex scaling to find physical resonance states, 12:49027 (RA;US)

MARINE DISPOSAL
Monitoring
Deepwater demersal fishes observed from the submersible AVALON (DSRV-2) off the Farallon Islands, 24 June 1985. Technical report (Final), 12:47228 (R;US)

MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

MARINE VEHICLE ACCIDENTS
See ACCIDENTS

MARKARIAN GALAXIES
Far Infrared Radiation
Radio and infrared observations of (almost) one hundred non-Seyfert Markarian galaxies, 12:48657 (RA;US)
Radiowave Radiation
Radio and infrared observations of (almost) one hundred non-Seyfert Markarian galaxies, 12:48657 (RA;US)
Visible Radiation
Radio and infrared observations of (almost) one hundred non-Seyfert Markarian galaxies, 12:48657 (RA;US)

MARS PLANET
Mission Analysis
Nuclear powered Mars cargo transport mission utilizing advanced ion propulsion, 12:47459 (R;US)

MASERS
Microwave Amplification by Stimulated Emission of Radiation.
Polarization
Mechanisms for the circular polarization of astrophysical OH masers in star-forming regions and the inferred magnetic fields, 12:48585 (RA;US)

MASS
See also THERMAL MASS
Quantization
Symmetry breaking by Wilson loops and mass quantization, 12:48808 (R;JP)

MASS SPECTROMETERS
Analysis of middle-distillate fuels by high-resolution field-ionization mass spectrometry. Annual report (Final), 1 June 1982-November 1986, 12:47139 (R;US)
Design
Accelerator mass spectrometry for measurement of long-lived radioisotopes, 12:48294 (J;US)
Expert Systems
Diagnostics aid for mass spectrometer trouble-shooting, 12:48293 (R;US)

MASS SPECTROSCOPY
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)

MASS (THERMAL)
See THERMAL MASS

MASS TRANSIT SYSTEMS
Vehicles
High-occupancy-vehicle treatments, impacts, and parameters (a synthesis). Volume 1. Procedures and conclusions. Final report, 12:47667 (R;US)

MASSIVE VECTOR-MESON MODEL

MATERIALS TESTING REACTORS
For testing properties of materials or equipment in a radioactive environment.
Electric Motors
Computerized system for studies on creep of irradiated materials in the BR-10 reactor. Control system for electric motor, 12:47444 (R;SU;In Russian)

MATHEMATICAL LOGIC
Theory of usuality, 12:49205 (RA;US)

MATHEMATICAL MODELS
See also ATOMIC MODELS
COSMOLOGICAL MODELS
HARMONIC OSCILLATOR MODELS
MOLECULAR MODELS
NUCLEAR MODELS
PARTICLE MODELS
An empirical investigation of the use of ranks in πps sampling, 12:49171 (R;US)
Evaluation
Specification of a test problem for HYDROCOIN [Hydrologic Code Intercomparison] Level 3 Case 2: Sensitivity analysis for deep disposal in partially saturated, fractured tuff, 12:47230 (R;US)

MATRICES
See also DENSITY MATRIX

Calculation Methods
Optimizing interpreter for multidimensional products in computational chemistry, 12:49181 (RA;US)
Computer Codes
Optimizing interpreter for multidimensional products in computational chemistry, 12:49181 (RA;US)
MATRIX ELEMENTS
Numerical Solution
Nuclear wave functions for three particle states, 12:48969 (J;US)
Particle-Core Coupling Model
Nuclear wave functions for three particle states, 12:48969 (J;US)
MATRIX MATERIALS
Aluminium Alloys
Method to produce titanium aluminide metal-matrix composite articles, 12:47929 (P;US)
Titanium Alloys
Method to produce titanium aluminide metal-matrix composite articles, 12:47929 (P;US)
MAXWELL EQUATIONS
Numerical Solution
Engineering modeling and simulation, 12:48150 (RA;US)
MCPP
See DUAL-PURPOSE POWER PLANTS
MEASURING INSTRUMENTS
Use of a more specific term is recommended.
See also ACCELEROMETERS
DISPLACEMENT GAGES
INTERFEROMETERS
MONITORS
PHOTOMETERS
RADIATION DETECTORS
RADIOMETRIC GAGES
SPECTROMETERS
Automation
Automation of a hydrogen probe for determination of hydrogen solubilities in coal liquids solvents, 12:47039 (R;US)
Grants
Guide for the preparation of applications for the University Research Instrumentation program, 1988, 12:49151 (R;US)
Operation
Negative ion processes for the unambiguous identification of polycyclic aromatic compounds, 12:47047 (J;GB)
Planning
[The MHD [magnetohydrodynamics] coal fired flow facility]: Quarterly technical progress report, April-June 1987, 12:47610 (R;US)
MECHANICAL TRANSMISSIONS
Design
Two-speed transaxle for AC powered light truck drivetrains, 12:47742 (RA;US)
Performance Testing
Two-speed transaxle for AC powered light truck drivetrains, 12:47742 (RA;US)
MEDICAL CENTERS
See MEDICAL ESTABLISHMENTS
MEDICAL ESTABLISHMENTS
See also HOSPITALS
Fuel Cell Power Plants
Characterization of instrumented sites for the Onsite Fuel-Cell Field-Test project. Executive Summary. Topical report, 1983-1985, 12:47625 (R;US)
MELANOCYTES
See ANIMAL CELLS
MELTDOWN
Chemical Reaction Kinetics
In-plant chemical phenomena potentially important to nuclear reactor severe accidents and their source terms, 12:47450 (RA;US)
Corium
Corrosion and deposition studies of stainless steel exposed to aerosols containing Te, Cs, I, Sn, Mn, Ag and B_2O_3 at 300 to 1000°C in a reducing ($H_2/H_2O/N_2$) environment, 12:47498 (RA;US)
Deposition
Corrosion and deposition studies of stainless steel exposed to aerosols containing Te, Cs, I, Sn, Mn, Ag and B_2O_3 at 300 to 1000°C in a reducing ($H_2/H_2O/N_2$) environment, 12:47498 (RA;US)
Fission Products
Iodine chemical reactions considered in German PWR core-melt accident risk evaluation, 12:47517 (RA;US)
Reaction Product Transport Systems
Iodine chemical reactions considered in German PWR core-melt accident risk evaluation, 12:47517 (RA;US)
MEMBRANES
Performance
Separation of dilute hazardous organics by low-pressure composite membranes. Final report, April 1985-December 1986, 12:48432 (R;US)
MEMORY DEVICES
Two-dimensional signal processing and storage and theory and applications of electromagnetic measurements. Annual report, 1 January-31 February 1986, 12:49165 (R;US)
MERCURY
Electronic Structure
Generalized Kohn-Sham theory for low-energy electron scattering by atoms including relativistic effects, 12:47959 (RA;US)
Evaporation
Study of the thermal vaporization process of Hg from coal, 12:47033 (R;SE;In Swedish)
Excretion
Epidemiological study of mercury elimination in the urine of children living in an industrial area (middle of the Ruhr area) in comparison to those living in a non-industrial area (Westphalia), 12:48527 (R;DE;In German)
MERCURY SULFIDES
Dissociation
Study of the thermal vaporization process of Hg from coal, 12:47033 (R;SE;In Swedish)
MERCURY TELLURIDES
Ion Implantation
EPR (electron paramagnetic resonance) studies of defects and impurities in boron-implanted Hg/sub 1-x/Cd/sub x/Te. Technical report, 12:47884 (R;US)
Studies of boron implantation through photochemically deposited SiO_2 films on Hg/sub 1-x/Cd/sub x/Te. Technical report, 12:47885 (R;US)
MESH GENERATION
Finite Element Method
Two-dimensional multigroup finite element calculation of fast reactor in diffusion approximation, 12:47426 (R;CS;In Czech)
MESON RESONANCES
See also DELTA-966 RESONANCES
E-1422 RESONANCES
ETA-2980 RESONANCES
IOTA-1440 RESONANCES
*K*RESONANCES*
SIGMA-410 RESONANCES
UPSILON RESONANCES
Pions polarizability and H(1190) meson, 12:48796 (RA;SU;In Russian)
Hadronic Particle Decay
Observation of a narrow meson with a mass of 1750 MeV decaying into etaeta pair, 12:48753 (R;SU;In Russian)
Mass
On properties of the third pseudoscalar isosinglet, 12:48794 (RA;SU;In Russian)
Particle Production
Observation of a narrow meson with a mass of 1750 MeV decaying into etaeta pair, 12:48753 (R;SU;In Russian)
MESON SPECTROSCOPY
Shower Counters
Conceptual design of a high-resolution $\pi 0$ spectrometer, 12:48261 (R;US)
MESON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
METAGALAXY

METALLIC GLASSES
Diffusion
Point defects and atomic diffusion in metallic glasses, 12:47809 (R;FR)

Point Defects
Point defects and atomic diffusion in metallic glasses, 12:47809 (R;FR)

METAL-METAL OXIDE BATTERIES
See also IRON-NICKEL BATTERIES
NICKEL-CADMIUM BATTERIES
NICKEL-ZINC BATTERIES

Cathodes
A new technique for improving voltage regulation in Li/FeS/sub 2/ thermal batteries, 12:47572 (BA;US)

Design
Li(Si)/FeS/sub 2/ thin cell thermal battery development, 12:47567 (BA;US)

Fabrication
Li(Si)/FeS/sub 2/ thin cell thermal battery development, 12:47567 (BA;US)

Planning
Li(Si)/FeS/sub 2/ thin cell thermal battery development, 12:47567 (BA;US)

METAL-NONMETAL BATTERIES
See also LITHIUM-SULFUR BATTERIES
SODIUM-SULFUR BATTERIES
ZINC-BROMINE BATTERIES

Design
Lithium-metal sulfide battery development and submodule demonstration, 12:47761 (RA;US)

Electric Conductivity
Low power, low cost, high frequency galvanostat and application to Li/I_2 (P2VP) batteries, 12:48021 (RA;US)

Performance Testing
Lithium-metal sulfide battery development and submodule demonstration, 12:47761 (RA;US)

METALS

ALUMINIUM
BISMUTH
CADMIUM
GERMANIUM
LEAD
LIQUID METALS
MERCURY
TIN
TRANSITION ELEMENTS

Cleaning
Laboratory protocol to demonstrate equivalency for plant wastewater cotreatment: Final report, 12:47358 (R;US)

Electric Conductivity
Comment on "Sensitivity of the conductance of a disordered metal to the motion of a single atom: Implications for 1/f noise", 12:47849 (J;US)

Fluctuations
Comment on "Sensitivity of the conductance of a disordered metal to the motion of a single atom: Implications for 1/f noise", 12:47849 (J;US)

Heat Treatments
Optimising the use of energy in the heat treatment of metals using protective gas atmospheres, 12:47843 (R;FI;In Finnish)

Melting
Shock-induced melting and rapid solidification, 12:47842 (R;US)

Phase Studies
Modelling and theories of alloy phase behavior, 12:47808 (R;US)

Quantitative Chemical Analysis
Development and method of use of a mass spectrometric isotope dilution analysis within the use of negative thermoionisation for determination of boron traces, 12:47938 (R;DE;In German)

Shock Heating
Shock-induced melting and rapid solidification, 12:47842 (R;US)

Solidification
Shock-induced melting and rapid solidification, 12:47842 (R;US)

METASTABLE STATES
For atomic and molecular states only; for nuclear states use ISOMERIC NUCLEI.

Decay
Theory of half-collision cross sections, 12:48700 (R;US)

METASTASES

Planning
Influence of CT control examinations on the irradiation planning for patients with cerebral metastases, 12:48468 (R;DE;In German)

Radiotherapy
Influence of CT control examinations on the irradiation planning for patients with cerebral metastases, 12:48468 (R;DE;In German)

METEOROLOGY

Manuals
Hanford Meteorological Station computer codes: Volume 3, The TANK computer code, 12:49212 (R;US)

P Codes
Hanford Meteorological Station computer codes: Volume 2, The PROD computer code, 12:48312 (R;US)

S Codes
Hanford Meteorological Station computer codes: Volume 4, The SUM computer code, 12:49213 (R;US)

T Codes
Hanford Meteorological Station computer codes: Volume 3, The TANK computer code, 12:49212 (R;US)

METER WAVE RADIATION
See RADIOWAVE RADIATION

METHANATION

Catalysts
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)

METHANE

Binding Energy
Binding energies and peak intensities of light hydrocarbon molecules through TOM I. Methane and acetylene, 12:47974 (RA;US)

Chemical Analysis
Methane contents of oil shale from the Piceance Basin, Colorado. Report of investigations/1987, 12:47185 (R;US)

Chemical Preparation
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)

Combustion
Biogas originating from the waste collected to the Vuosaari dumping site, 12:47261 (R;FI;In Finnish)

Combustion Properties
Biogas originating from the waste collected to the Vuosaari dumping site, 12:47261 (R;FI;In Finnish)

Electronic Structure
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)

Formation Heat
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)

Ionization Potential
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)

Molecular Structure
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)

Monitoring
Computer-based monitoring and remote control of methane drainage systems, 12:47089 (R;XE)

Phase Diagrams
Supercritical aqueous systems under high pressure. A statistical-thermodynamical equation of state and experimental investigations, 12:47992 (R;DE;In German)

Photoionization
Binding energies and peak intensities of light hydrocarbon molecules through TOM I. Methane and acetylene, 12:47974 (RA;US)

Recovery
Review of hydrologic testing in coal beds. Topical report, January 1985-December 1986, 12:47172 (R;US)

Sewage Sludge
Energy recovery of the sludge in small sewage treatment plants, 12:47264 (R;FI;In Finnish)
Solvents
Measurement and interpretation of the solubility of a normal fluid in a hydrogen-bonding solvent: the methane-methanol system. Topical report, 12:47263 (R;US)
Supercritical State
Supercritical aqueous systems under high pressure. A statistical-thermodynamical equation of state and experimental investigations, 12:47992 (R;DE;In German)
Waste Water
Energy recovery of the sludge in small sewage treatment plants, 12:47264 (R;FI;In Finnish)
Wave Functions
Electron momenta in molecules and low-dimensional solids, 12:47963 (RA;US)

METHANOL
Chemical Preparation
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
Chemical Reaction Kinetics
Oxygen exchange reactions during methanol steam reforming, 12:47254 (BA;US)
Production
Liquefaction of natural gas to methanol for shipping and storage, 12:47168 (BA;US)
Solvent Properties
Measurement and interpretation of the solubility of a normal fluid in a hydrogen-bonding solvent: the methane-methanol system. Topical report, 12:47263 (R;US)
Steam Reformer Processes
Oxygen exchange reactions during methanol steam reforming, 12:47254 (BA;US)
Synthesis
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Tribology
Tribological properties of coal slurries, 12:47041 (R;US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Coordinated Research Programs
Overview of DOE Alternative Fuels Utilization Program, 12:47265 (BA;US)
Feasibility Studies
Results from the first year of operation of the Federal Methanol Fleet at Lawrence Berkeley Laboratory, 12:47715 (R;US)

METHYL ALCOHOL
See METHANOL

METHYL FLUORIDE
Labelling
New techniques for positron emission tomography in the study of human neurological disorders for the period June 15, 1987 through December 14, 1987, 12:48465 (R;US)

METHYL RADICALS
Chemical Preparation
Kinetics of the reaction between methyl radicals and oxygen atoms between 294 and 900 K, 12:48090 (J;US)
Chemical Reactions
Dynamics of the reactions of CH_3i, CH_3^+, and CH^+ with acetylene, 12:48003 (J;US)
Kinetics of the reaction between methyl radicals and oxygen atoms between 294 and 900 K, 12:48090 (J;US)

METHYL VIOLOGEN
See BIPYRIDINES

METHYLAMINE
Chemical Reactions
SCF theory of continuum solvent effects representation II. Quantum chemical calculation of thermodynamic properties of some acid-base equilibria in solution, 12:47976 (RA;US)
Hydrogenation
SCF theory of continuum solvent effects representation II. Quantum chemical calculation of thermodynamic properties of some acid-base equilibria in solution, 12:47976 (RA;US)
Solution Heat
SCF theory of continuum solvent effects representation II. Quantum chemical calculation of thermodynamic properties of some acid-base equilibria in solution, 12:47976 (RA;US)

METHYLBENZENE
See TOLUENE

METHYLENE CHLORIDE
Indoor Air Pollution
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)

METHYL-FUEL

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Computerized Control Systems
Basic architecture and operation of the Personnel Safety and Interlocks System for MFTF-B, 12:49105 (RA;US)
Safety
Basic architecture and operation of the Personnel Safety and Interlocks System for MFTF-B, 12:49105 (RA;US)

MHD CHANNELS
Design
MHD [magnetohydrodynamics] channel development: Quarterly report for October 1986-December 1986, 12:47611 (R;US)
Fluid Mechanics
On the magnetoaerothermal instability, 12:47613 (RA;US)
Instability
On the magnetoaerothermal instability, 12:47613 (RA;US)
Magneto-Thermal Effects
On the magnetoaerothermal instability, 12:47613 (RA;US)
Performance Testing
MHD [magnetohydrodynamics] channel development: Quarterly report for October 1986-December 1986, 12:47611 (R;US)

MHD GENERATOR CDIF
Coal-fired Component Development and Integration Facility at Butte, Montana.
Computerized Simulation
Three-dimensional MHD [magnetohydrodynamics] flow in the CDIF [Component Development and Integration Facility] powertrain, 12:47620 (RA;US)
Magneto-Thermal Effects
Three-dimensional MHD [magnetohydrodynamics] flow in the CDIF [Component Development and Integration Facility] powertrain, 12:47620 (RA;US)

MHD GENERATOR CFFF
Coal Fired Flow Facility for MHD generator component testing at Tullahoma, Tenn.
Design
[The MHD [magnetohydrodynamics] coal fired flow facility]: Quarterly technical progress report, April-June 1987, 12:47610 (R;US)
Diagnostic Techniques
[The MHD [magnetohydrodynamics] coal fired flow facility]: Quarterly technical progress report, April-June 1987, 12:47610 (R;US)
Measuring Instruments

MILL TAILINGS
Containment
Construction methods and materials of archaeological mounds: implications for uranium tailings impoundments, 12:47192 (J;US)
Land Pollution Control
Design of radioactive tailings disposal sites to last 1,000 years, 12:47237 (BA;US)
Radioactive Waste Disposal
Design of radioactive tailings disposal sites to last 1,000 years, 12:47237 (BA;US)
Water Pollution Abatement
Design of radioactive tailings disposal sites to last 1,000 years, 12:47237 (BA;US)
MILLSTONE-2 REACTOR
Waterford, Connecticut, USA
Display Devices
User's guide for signal validation software: Final report, 12:47443 (R;US)
Reactor Instrumentation
User's guide for signal validation software: Final report, 12:47443 (R;US)
MILLSTONE-3 REACTOR
Waterford, Connecticut, USA
Empirical modeling of steady-state behavior of linear and nonlinear systems with application to signal validation: Topical report, 12:47442 (R;US)
Display Devices
User's guide for signal validation software: Final report, 12:47443 (R;US)
Reactor Instrumentation
User's guide for signal validation software: Final report, 12:47443 (R;US)
MINE HAULAGE
Optimization
External haulage drives for winning machines, 12:47084 (R;XE;In German)
MINE ROADWAYS
Construction
Planning aids for trackless vehicles for underground applications in black coal mining, 12:47094 (R;DE;In German)
Planning
Planning aids for trackless vehicles for underground applications in black coal mining, 12:47094 (R;DE;In German)
Strata Control
Improvement of roadway stability by bolting and a composite support system, 12:47072 (R;XE;In German)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERAL RESOURCES
See also COAL DEPOSITS
NATURAL GAS DEPOSITS
OIL SHALE DEPOSITS
PETROLEUM DEPOSITS
Taxes
Some aspects of tax progressivity in natural resources taxation, 12:47147 (R;NO)
MINERAL WASTES
Ground Disposal
Leaching studies of solid wastes generated from fluidized bed combustion of low-rank western coals, 12:47065 (BA;US)
Leaching
Leaching studies of solid wastes generated from fluidized bed combustion of low-rank western coals, 12:47065 (BA;US)
MINING ENGINEERING
Analysis of rock chips produced during water-jet-assisted cutting. Report of Investigations/1987, 12:47097 (R;US)
MINING EQUIPMENT
Maintenance
Perfecting of maintenance and servicing systems for longwall face equipment, 12:47071 (R;XU)
Remote Control
Face ends - minimization of layout constraints, 12:47082 (R;XE;In German)

MINNESOTA
Bulk Density

MODIFIED IN-SITU PROCESSES
Waste Water
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis; Residual brine treated by wet-air oxidation, 12:47191 (R;US)
MODULAR COGENERATION POWER PLANTS
See DUAL-PURPOSE POWER PLANTS
MOLECULAR BEAMS
Infrared Spectra
Direct infrared absorption of clusters in pulsed molecular beams: First progress report, May 1, 1986 to July 31, 1987, 12:48717 (R;US)
MOLECULAR MODELS
Analytical Solution
Aspects of linked cluster expansion in general model space many-body perturbation and coupled-cluster theory, 12:47965 (RA;US)
Graphs
Chemical graph-theoretic cluster expansions, 12:49022 (RA;US)
Identification numbers for chemical structures, 12:49023 (RA;US)
Mathematical Operators
Aspects of linked cluster expansion in general model space many-body perturbation and coupled-cluster theory, 12:47965 (RA;US)
Potentials
Construction and fitting of molecular potential energy surfaces and their use in vibration-rotation calculations, 12:47971 (RA;US)
Symmetry
Formulation of the Hohenberg-Kohn-Sham theory, 12:49028 (RA;US)
Topology
Identification numbers for chemical structures, 12:49023 (RA;US)
Wave Functions
Aspects of linked cluster expansion in general model space many-body perturbation and coupled-cluster theory, 12:47965 (RA;US)
MOLECULAR ORBITAL MODEL
See ATOMIC MODELS
MOLECULES
MOLECULAR SIEVES
Sorptive Properties
A modeling study of vacuum sorption characteristics of carbon dioxide on 4A zeolite molecular sieves, 12:47940 (R;US)
MOLECULAR STRUCTURE
Graphs
Solved and unsolved problems of chemical graph theory, 12:47982 (RA;US)
MOLECULE-MOLECULE COLLISIONS
Energy Transfer
Direct measurement of rotational energy transfer rate constants for $H^{35}Cl$ (v = 1), 12:48727 (J;US)
Energy-Level Transitions
Direct measurement of rotational energy transfer rate constants for $H^{35}Cl$ (v = 1), 12:48727 (J;US)
MOLECULES
See also POLYATOMIC MOLECULES
Collisions
Ion-dipolar molecule rate coefficients, 12:48698 (R;GB)
Metastable States
Theory of half-collision cross sections, 12:48700 (R;US)
Shock Waves
Molecular dynamics simulations of energy transfer in shocked molecular systems, 12:47984 (RA;US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Heat Storage
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)

MOLYBDATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Solvent Extraction
Extraction and anion exchange behavior of molybdate and pertechnetate ions, 12:48041 (RA;DD;In German)
MOLYBDENUM
Beam Optics
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Catalytic Effects
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 October-31 December 1985, 12:47018 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)
Deposition
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Dislocations
Grouping of radiation-induced dislocation loops in molybdenum, 12:47822 (RA;SU;In Russian)
Ion Implantation
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)
Physical Radiation Effects
Grouping of radiation-induced dislocation loops in molybdenum, 12:47822 (RA;SU;In Russian)
MOLYBDENUM 100
Double Beta Decay
Double beta decay experiment using ^{100}Mo, 12:48887 (R;US)
MOLYBDENUM 99
Isotope Production
/sup 99/Mo production at AMOR-1 in the years 1984 to 1985, 12:47250 (RA;DD;In German)
MOLYBDENUM ALLOYS
See also STAINLESS STEEL M-50
STAINLESS STEEL-316
Fatigue
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
Microstructure
Microstructural effects on the fatigue behavior of Fe-C-X alloys: Technical progress report, November 16, 1984-November 15, 1987 (X = Mn, V, Mo), 12:47814 (R;US)
MOLYBDENUM COMPLEXES
Catalytic Effects
Chemically modified electrodes and related solution chemistry: Technical progress report for the period 1/15/87 to 9/10/87, 12:47890 (R;US)
MONGRELS
See DOGS
MONITORING
Use of a more specific term is recommended.
See also BEAM MONITORING
RADIATION MONITORING
Automation
Automated long-term surveillance of a commercial nuclear power plant, 12:47445 (R;US)
Planning
Preliminary long-range environmental management plan: Program overview and summary, 12:47582 (R;US)
MONITORING (BEAM)

MONOCHROMATORS
Energy Resolution
Experimental study of the neutron monochromators on the basis of multi-layer interference structure, 12:48281 (RA;SU;In Russian)
MONOCLONAL ANTIBODIES
Biochemical Reaction Kinetics
Monoclonal antibodies to drosophila cytochrome P-450's, 12:48455 (J;US)
Radioimmunoassay
Monoclonal antibodies to drosophila cytochrome P-450's, 12:48455 (J;US)
MONTANA
See also POWDER RIVER BASIN
Missile Launching Sites
Environmental impact statement: small intercontinental ballistic missile program, Malmstrom Air Force Base, Montana. Draft report, 12:47580 (R;US)
MORDENITE
Dehydration
Study by solid-state NMR of ^{133}Cs and ^{1}H of a hydrated and dehydrated cesium mordenite, 12:48010 (J;US)
NMR Spectra
Study by solid-state NMR of ^{133}Cs and ^{1}H of a hydrated and dehydrated cesium mordenite, 12:48010 (J;US)
MULTI-CHANNEL ANALYZERS
Computer Codes
Software extension of the VKA 4995 multichannel analyzer, 12:48270 (RA;DD;In German)
MULTICHARGED IONS
Ions with charge 3 and above. Coordinate the above descriptor with a descriptor for the specific ion.
Beam Emittance
Heavy ion accelerator (UTI-2), 12:48175 (R;SU;In Russian)
Confinement
Multi-charged ion measurements in ion traps, 12:48707 (RA;US)
Excited States
Atomic physics at the LBL ECR [Electron Cyclotron Resonance] ion source, 12:48710 (RA;US)
Fine Structure
Spectroscopy of highly ionized atoms, 12:48704 (RA;US)
Ion Sources
Direct sources of low energy multiply charged ions, 12:48168 (RA;US)
Science with multiply-charged ions at Brookhaven National Laboratory, 12:48711 (RA;US)
Ion-Atom Collisions
Atomic physics at the LBL ECR [Electron Cyclotron Resonance] ion source, 12:48710 (RA;US)
High charge state, ion-atom collision experiments using accel-decel, 12:48708 (RA;US)
Optical spectroscopy of slow, highly ionized atoms, 12:48709 (RA;US)
Ion-Ion Collisions
Multi-charged ion measurements in ion traps, 12:48707 (RA;US)

Laser Spectroscopy
Optical spectroscopy of slow, highly ionized atoms, 12:48709 (RA;US)
Metastable States
Atomic physics at the LBL ECR [Electron Cyclotron Resonance] ion source, 12:48710 (RA;US)
X-Ray Spectroscopy
Accurate x-ray spectroscopy, 12:48703 (RA;US)
MULTI-NUCLEON TRANSFER REACTIONS
More than one nucleon transfered.
Nuclear Fragments
Large cluster transfer processes in reactions leading to heavy actinides, 12:48913 (RA;SU)
MULTIPHASE FLOW
Numerical Analysis
PIC numerical scheme for a two-dimensional Eulerian code, 12:48132 (BA;US)
MULTIPROCESSING
See PARALLEL PROCESSING
MULTIPROCESSORS
See ARRAY PROCESSORS
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MUNICH SUPERCONDUCTING SECTOR CYCLOTRON
See MUNICH SUSE CYCLOTRON
MUNICH SUSE CYCLOTRON
Superconducting Coils
Test coil for the superconducting SUSE cyclotron, 12:48204 (R;DE;In German)
MUNICIPAL WASTES
Energy Conversion
Energy from municipal waste: opportunities for the Southwest, 12:47608 (R;US)
Waste Processing Plants
Energy recovery of the sludge in small sewage treatment plants, 12:47264 (R;FI;In Finnish)
MUNITIONS
See ORDNANCE
MUON PAIRS
Pair Production
Study of the production of muon pairs at the Petra e/sup +/e/sup -/ collider: measurements of the cross section and of the electroweak asymmetry, 12:48748 (R;FR;In French)
MUON REACTIONS
Capture
Isotopic dependence for nuclear reactions induced by negative muons, 12:48898 (RA;SU;In Russian)
Fission
Isotopic dependence for nuclear reactions induced by negative muons, 12:48898 (RA;SU;In Russian)
MUON-CATALYZED FUSION
Model for the nuclear effects of the d-t-muon fusing state, 12:48875 (R;US)
MUONIC IONS
E0-Transitions
On possibility of the μHe/sup +/(2s1/2)He/sub 4/ and μHe/sup +/(2s1/2)He/sub 6/ symmetrical complex production in helium atmosphere, 12:48718 (R;SU;In Russian)
MUONIUM
Chemical Reactions
Dynamics calculations of kinetic isotope effects for the reactions of muonium atoms with F_2 and Cl_2, 12:47970 (RA;US)
Hyperfine Structure
Status of QED [Quantum Electrodynamics] in atomic physics, 12:48702 (RA;US)
Isotope Effects
Dynamics calculations of kinetic isotope effects for the reactions of muonium atoms with F_2 and Cl_2, 12:47970 (RA;US)
MUSEUMS
See EDUCATIONAL FACILITIES
MUTAGENS
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Toxicity
Development and application of algorithms for generating estimates of toxicity for the NOHS (National Occupational Hazard Survey) data base. Technical report, 12:48528 (R;US)
MX DEVICES
See MFTF DEVICES
MYCOSES
Radiotherapy
Treatment of mycosis fungoidis by low energy x-rays, 12:48473 (RA;ZA)
MYLAR
Oxygen 16 Reactions
Relativisitic heavy ion collisions, 12:48896 (R;US)
MYOCARDIUM
Radionuclide Kinetics
Preparation, testing of uptake by the isolated rat heart and preliminary results of tissue distribution of [/sup 99m/Tc]technetium(I)-hexakis(t-butylisonitril), a potential perfusion indicator for myocardial demonstration, 12:48505 (RA;DD;In German)
Testing of substances affine to the myocardium by use of perfused isolated rat heart and /sup 99m/Tc-DMPE complexes, 12:48504 (RA;DD;In German)
Whole-body autoradiography as screening test for myocardial affinity of organic cations. 2, 12:48508 (RA;DD;In German)
Scintiscanning
Scintiscanning of the miniature swine myocardium with [/sup 99m/Tc(DMPE)/sub 2/Cl/sub 2/]Cl, 12:48477 (RA;DD;In German)

NEUTRINO REACTIONS
Neutral strange particle production in neutrino interactions of charged current at energy of 3-30 GeV, 12:48757 (R;SU;In Russian)
NEUTRINO-NUCLEON INTERACTIONS
See also ANTINEUTRINO-NUCLEON INTERACTIONS
Inclusive Interactions
Search for neutral heavy leptons from ν - N scattering, 12:48771 (J;US)
NEUTRINOS
See also ANTINEUTRINOS
SOLAR NEUTRINOS
Mass
Neutrino mass and the solar neutrino problem, 12:48834 (BA;US)
Neutrino Oscillation
Neutrino mass and the solar neutrino problem, 12:48834 (BA;US)
Particle Production
Approximation for annihilation neutrino radiation power, 12:48557 (R;SU;In Russian)
NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS
NEUTRON BEAMS
Neutron Dosimetry
Quality of the Pretoria fast neutron beam, 12:48985 (RA;ZA;In Afrikaans)
Quality Factor
Quality of the Pretoria fast neutron beam, 12:48985 (RA;ZA;In Afrikaans)
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON DETECTORS
Comparative Evaluations
Calibration and experimental comparison of the active well coincidence counter and PHONID-II, 12:47243 (R;FR)
Design
A neutron detector based on microchannel plates, 12:47246 (R;US)
Fuel Assemblies
Calibration of the active well coincidence counter for cylindrical, high-enrichment uranium-aluminium fuel assemblies, 12:48232 (R;FR)
NEUTRON DIFFRACTION
Data Analysis
Analysis of inelastic neutron scattering spectra from a time-of-flight spectrometer with filter detector, 12:49006 (BA;GB)
IPNS Rietveld analysis software package for time-of-flight powder diffraction data: recent developments, 12:49005 (BA;GB)
NEUTRON DIFFUSION EQUATION
D Codes
One dimensional benchmark calculations using diffusion theory, 12:47432 (R;TR;In Turkish)
NEUTRON DOSIMETRY
Geiger-Mueller Counters
Dosimetry in mixed neutron-gamma fields: the neutron sensitivities of Geiger-Mueller counters, 12:48241 (RA;ZA)
NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON MONITORS
Calibration
Calibration of neutron monitors for the purpose of radiation protection at the CSIR, 12:48981 (RA;ZA;In Afrikaans)
Radiation Protection
Calibration of neutron monitors for the purpose of radiation protection at the CSIR, 12:48981 (RA;ZA;In Afrikaans)
NEUTRON MULTIPLIER FACILITY
See SUBCRITICAL ASSEMBLIES
NEUTRON RADIOGRAPHY
Fuel Pins
Shielding design on neutron radiography facility for Koeberg fuel pins, 12:48137 (RA;ZA)
Quality Control
Shielding design on neutron radiography facility for Koeberg fuel pins, 12:48137 (RA;ZA)

NEUTRON REACTIONS
Cross Sections
On the study of the /sup 7/Be(n,p)/sup 7/Li reaction in the neutron energy range from 0.025 to 500 eV, 12:48879 (RA;SU;In Russian)
Direct Energy Conversion
Electricity and short wavelength radiation generator, 12:47631 (P;GB)
Exciton Model
Exciton cascade model for fast neutron reactions, 12:48906 (R;XA)
Research Programs
US-Japan Cooperative Program on neutron scattering, 12:48973 (R;US)
Strength Functions
Spin-orbital effects in resonance and potential scattering of p-wave neutrons, 12:48912 (RA;SU;In Russian)
Total Cross Sections
Application of the eikonal expansion method for description of intermediate energy hadron-nucleus interaction, 12:48908 (RA;SU;In Russian)
NEUTRON SLOWING-DOWN THEORY
Neutron slowing down and transport in an infinite medium: 2, The scalar flux at large distances/small lethargies, 12:48975 (R;US)
Neutron slowing down and transport in an infinite medium: 1, Generalized age-theory and its range of validity, 12:48974 (R;US)
NEUTRON SOURCE FACILITIES
Design
ANSL-V: ENDF/B-V based multigroup cross-section libraries for Advanced Neutron Source (ANS) reactor studies, 12:48976 (R;US)
Evaluated Data
ANSL-V: ENDF/B-V based multigroup cross-section libraries for Advanced Neutron Source (ANS) reactor studies, 12:48976 (R;US)
Nuclear Data Collections
ANSL-V: ENDF/B-V based multigroup cross-section libraries for Advanced Neutron Source (ANS) reactor studies, 12:48976 (R;US)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Deuteron Sources
Operation in pulsed mode at RTNS-II, 12:48213 (R;US)
Radiation Doses
Projected Standard on neutron skyshine (Skyshine), 12:47199 (R;US)
NEUTRON TRANSPORT
Computerized Simulation
Simulating neutron, photon and charged particle trajectories in geometric-computer systems, 12:48977 (R;SU;In Russian)
NEUTRONS
Dosimetry
Development of a tissue-equivalent proportional-counter system for the measurement of neutron dose. Final report, 1986-1987, 12:48228 (R;US)
Form Factors
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
NEVADA TEST SITE
Geology
Inferences about the local stress field from focal mechanisms: Applications to earthquakes in the southern Great Basin of Nevada (NNWSI), 12:47236 (J;US)
Seismic Surveys
Inferences about the local stress field from focal mechanisms: Applications to earthquakes in the southern Great Basin of Nevada (NNWSI), 12:47236 (J;US)
NEW JERSEY
Development and demonstration of indoor radon-reduction measures for 10 homes in Clinton, New Jersey. Final report, April 1986-January 1987, 12:48384 (R;US)
Air Quality
Compilation and analysis of air quality data in support of acid deposition research: Progress report, 12:48313 (R;US)
NEW YORK
Air Quality
Compilation and analysis of air quality data in support of acid deposition research: Progress report, 12:48313 (R;US)
Energy Consumption
Petroleum supply assessment '87: Technical report, 12:47151 (R;US)
Energy Demand
New York State energy demand forecasts '87: Technical report, 12:47577 (R;US)
Energy Models
Energy assessment '87: An analysis of New York State's energy future, 12:47576 (R;US)
Energy Policy
New York State energy demand forecasts '87: Technical report, 12:47577 (R;US)
Energy Supplies
Petroleum supply assessment '87: Technical report, 12:47151 (R;US)
NEWTON MECHANICS
See CLASSICAL MECHANICS
NEXT EUROPEAN TORUS
See NET TOKAMAK
NICKEL
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Desorption
Helium thermodesorption from Ni polycrystalline samples irradiated by He^+-ions up to $1x10^{17}$-$1x10^{18}$ ion/cm^2 doses, 12:47823 (R;SU;In Russian)
Electron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Ion Implantation
Helium thermodesorption from Ni polycrystalline samples irradiated by He^+-ions up to $1x10^{17}$-$1x10^{18}$ ion/cm^2 doses, 12:47823 (R;SU;In Russian)
Ion Microscopy
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)
Physical Radiation Effects
Collapse of defect cascades to dislocation loops, 12:47851 (J;NL)
Positron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Quantitative Chemical Analysis
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Surface Properties
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)
NICKEL 58 REACTIONS
One-Nucleon Transfer Reactions
Anomalous two-neutron transfer cross sections at large separation in heavy ion reactions, 12:48961 (J;NL)
Two-Nucleon Transfer Reactions
Anomalous two-neutron transfer cross sections at large separation in heavy ion reactions, 12:48961 (J;NL)
NICKEL ALLOYS
See also NICKEL STEELS
Chemical Reaction Kinetics
Effect of methane on the rate of hydrogen absorption by $LaNi_5H_x$ in liquid suspension, 12:47257 (J;CH)
Crystal Structure
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Hydridation
Kinetics of the absorption of hydrogen by $LaNi_5H_x$ suspended in aqueous solutions, 12:47258 (J;CH)
Hydrogen Storage
Effect of methane on the rate of hydrogen absorption by $LaNi_5H_x$ in liquid suspension, 12:47257 (J;CH)
Kinetics of the absorption of hydrogen by $LaNi_5H_x$ suspended in aqueous solutions, 12:47258 (J;CH)

Melting
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Neutron Diffraction
Polarization-analysis study of the atomic and spin-pair correlations in Ni/sub 0.76/Mn/sub 0.24/, 12:47845 (J;US)
Phase Studies
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Spin Glass State
Polarization-analysis study of the atomic and spin-pair correlations in Ni/sub 0.76/Mn/sub 0.24/, 12:47845 (J;US)
Splat Cooling
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Tensile Properties
The effect of strain rate on the yield behavior of iron-base LRO alloys at elevated temperatures ((Fe-Ni-V-Ti) alloy), 12:47815 (R;US)
Weldability
The role of composition and microstructure gradients on weld metal properties and behavior, 12:47835 (RA;US)

NICKEL COMPLEXES
Dichroism
Near-infrared dichroism of a mesogenic transition metal complex and its solubility in nematic hosts, 12:47811 (R;US)
Optical Properties
Near-infrared dichroism of a mesogenic transition metal complex and its solubility in nematic hosts, 12:47811 (R;US)
Solubility
Near-infrared dichroism of a mesogenic transition metal complex and its solubility in nematic hosts, 12:47811 (R;US)
Synthesis
Near-infrared dichroism of a mesogenic transition metal complex and its solubility in nematic hosts, 12:47811 (R;US)

NICKEL COMPOUNDS
See also NICKEL HYDROXIDES
NICKEL OXIDES
NICKEL SILICIDES
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)

NICKEL HYDROXIDES
Binding Energy
OH-transition metal bonding, 12:47975 (RA;US)

NICKEL IONS
Electron-Ion Collisions
Distorted-wave calculations of the electron-impact ionization of highly ionized Na-like ions, 12:48730 (J;US)
Hydration
Theoretical studies of electron and proton transfer processes in fluids: Progress report, August 1986 to September 1987, 12:47948 (R;US)

NICKEL OXIDES
Catalytic Effects
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)

NICKEL SILICIDES
Lattice Parameters
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
Magnetic Susceptibility
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
Magnetoresistance
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)

NICKEL STEELS
Defects
Analysis of crack propagation and arrest in welded LNG (liquefied natural gas) storage tanks. Final report, March 1984-October 1986, 12:47180 (R;US)
Tanks
Analysis of crack propagation and arrest in welded LNG (liquefied natural gas) storage tanks. Final report, March 1984-October 1986, 12:47180 (R;US)

NICKEL-CADMIUM BATTERIES
Design
Study of bipolar nickel-cadmium batteries as pulsed load filters. Final report, January-November 1985, 12:47563 (R;US)
Electrodes
Nickel-cadmium battery for electric vehicles, 12:47727 (RA;US)

NICKEL-HYDROGEN BATTERIES
Compression
Effect of component compression on the initial performance of an IPV nickel-hydrogen cell, 12:47565 (R;US)
Electrical Properties
Effect of component compression on the initial performance of an IPV nickel-hydrogen cell, 12:47565 (R;US)
Performance Testing
Test results of a 60 volt bipolar nickel-hydrogen battery, 12:47564 (R;US)

NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES

NICKEL-ZINC BATTERIES
Performance
Ni-Zn battery, 12:47726 (RA;US)
Performance Testing
New stabilized long cycle life nickel-zinc battery system for E.V.'s, 12:47725 (RA;US)

NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Crystal-Phase Transformations
Disproportional phase in barium-sodium niobate crystals, 12:48994 (RA;SU;In Russian)

NIOBIUM 93 TARGET
Niobium 93 Reactions
Transparency, stopping power and thermalization of nuclear matter in the Ca+Ca and Nb+Nb reactions at E/A=400 MeV: classical equation of motion approach, 12:48923 (R;SU)

NIOBIUM ALLOYS
See also INCONEL 600
NIOBIUM BASE ALLOYS
Powder Metallurgy
Mechanical properties of Cu-Nb and Cu-Nb/sub 3/Sn superconductors, 12:47820 (R;DE;In German)

NIOBIUM BASE ALLOYS
Powder Metallurgy
Mechanical properties of Cu-Nb and Cu-Nb/sub 3/Sn superconductors, 12:47820 (R;DE;In German)

NIOBIUM COMPLEXES
Dissociation
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_3i$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
Photochemical Reactions
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2^+$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)

NIOBIUM COMPOUNDS
See also NIOBATES
NIOBIUM SELENIDES
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)

Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)

NIOBIUM SELENIDES
Fermi Level
Fermi surface modifications and magnetic breakdown connected to charge-density waves in $NbSe_3$, 12:47902 (R;US)

NIOSH
Data Base Management
Development and application of algorithms for generating estimates of toxicity for the NOHS (National Occupational Hazard Survey) data base. Technical report, 12:48528 (R;US)
Manuals
NIOSH (National Institute for Occupational Safety and Health) pocket guide to chemical hazards. Second edition, 12:48529 (R;US)

NITRATES
See also URANYL NITRATES
Ecological Concentration
Nitrate in precipitation - a presentation of data from the European air chemistry network, 12:48330 (R;SE)
Washout
Evaluation of the chemical and physical processes affecting sulfate and nitrate wet deposition, 12:48360 (R;US)

NITRIC OXIDE
NO.
Chemical Reaction Kinetics
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)
Photoionization
Resonance structure in the vibrationally resolved photoelectron branching ratios and angular distributions of the $2\pi^{-1}$ channel of NO, 12:48726 (J;US)
Reduction
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)
Synthesis
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)

NITRO COMPOUNDS
See also NITROMETHANE
Density
Electrical conductivity, viscosity, and density of a two-component ionic system at its critical point, 12:48002 (J;US)
Electric Conductivity
Electrical conductivity, viscosity, and density of a two-component ionic system at its critical point, 12:48002 (J;US)
Viscosity
Electrical conductivity, viscosity, and density of a two-component ionic system at its critical point, 12:48002 (J;US)

NITROGEN
Absorption Spectra
Measurement and modeling of nitrogen resonance line profiles from an electrodeless discharge lamp, 12:48724 (J;US)
Adsorption
A modeling study of vacuum sorption characteristics of carbon dioxide on 4A zeolite molecular sieves, 12:47940 (R;US)
Cooling
Shock-induced cooling in dense fluids, 12:47913 (R;US)
Crystal Structure
New materials at high pressure, 12:47964 (RA;US)
Dissociation
Shock-induced cooling in dense fluids, 12:47913 (R;US)
Electronic Structure
New materials at high pressure, 12:47964 (RA;US)
X-ray incoherent scattering factor for molecular nitrogen as determined by high energy electron scattering, 12:48716 (RA;US)
Fertilizer Industry
World nitrogen survey. Technical paper, 12:47589 (R;US)
Phase Studies
New materials at high pressure, 12:47964 (RA;US)
Quantitative Chemical Analysis
Rapid dissolution technique for colorimetric determination of nitrogen in coals, 12:47048 (J;GB)
Shock Waves
Shock-induced cooling in dense fluids, 12:47913 (R;US)
Spectroscopy
Pulsed laser optogalvanic spectroscopy of nitrogen in a radiofrequency discharge, 12:48024 (RA;US)
Ultraviolet Spectra
Measurement and modeling of nitrogen resonance line profiles from an electrodeless discharge lamp, 12:48724 (J;US)
X-Ray Diffraction
X-ray incoherent scattering factor for molecular nitrogen as determined by high energy electron scattering, 12:48716 (RA;US)

NITROGEN DIOXIDE
NO_2.
Air Pollution
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)

NITROGEN HYDRIDES
See also AMMONIA
Formation Heat
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
Ionization Potential
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)

NITROGEN NITRIDES
See NITROGEN

NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
NITROUS OXIDE
Air Pollution Control
An experimental study of pulsed fluidized beds, 12:48159 (BA;US)
Reduction of NO/sub (x)/ through reburning, using pulverized wood or peat, 12:47063 (R;SE;In Swedish)
Air Pollution Monitoring
Methods of sampling and analysis for sulphur dioxide, oxides of nitrogen and particulate matter in the exhaust gases of large combustion plants, 12:48321 (R;XE)
Atmospheric Chemistry
Atmospheric nitrogen oxides: their detection and chemistry. Second-year report, August 1, 1984-August 31, 1985, 12:48369 (R;US)
Nitrogen oxides and related compounds in North Europe. Atmospheric processes, deposition, monitoring and trends, 12:48322 (R;SE)
Detection
Atmospheric nitrogen oxides: their detection and chemistry. Second-year report, August 1, 1984-August 31, 1985, 12:48369 (R;US)
Environmental Effects
Air quality standard for SO_2 and particles (Directive 80-779-EEC) and its significance for the other main air pollutants, 12:48320 (R;XE)
Health Hazards
Air quality standard for SO_2 and particles (Directive 80-779-EEC) and its significance for the other main air pollutants, 12:48320 (R;XE)
Photochemical Reactions
Role of nitrogen oxides in nonurban ozone formation in the planetary boundary layer over N (North) America, W (Western) Europe, and adjacent areas of ocean, 12:48357 (R;US)
Pollution Abatement
Influence of ammonia and hydrogen peroxide addition on NOsub(x) emissions in the flue gas channel of a 16 MW coal fired fluidised bed combustor, 12:47361 (R;SE)
Reduction
Removal of nitrogen oxides from flue gases, 12:48323 (R;FI;In Finnish)

NITROMETHANE
Chemical Reactions
Theoretical calculations of rate-determining steps for ignition of shocked, condensed nitromethane, 12:47968 (RA;US)
Energy Transfer
Theoretical calculations of rate-determining steps for ignition of shocked, condensed nitromethane, 12:47968 (RA;US)
NITROSAMINES
Carcinogenesis
Effects of separate and combined treatments with gamma radiation and diethylnitrosamine in neonatal rats on the induction of altered hepatocyte foci and hepatic tumors, 12:48518 (J;GB)
NITROUS OXIDE
N_2O.
Ecological Concentration
Nitrous oxide formation in combination, 12:48328 (RA;US)
Synthesis
Nitrous oxide formation in combination, 12:48328 (RA;US)
NMR
See NUCLEAR MAGNETIC RESONANCE
NMR SPECTROMETERS
Design
Pulsed-field-gradient nuclear magnetic resonance spectrometer for direct measurement of ionic diffusion in solid electrolytes. Final report, 1 January 1985-31 December 1986, 12:48275 (R;US)
NOBLE GASES
See RARE GASES
NOISE
Measuring Instruments
Fluidized bed sensor signals analysed by means of noise technique, 12:48156 (R;SE)
Multivariate Analysis
Determination of causalities between the variables by means of multivariate analysis, 12:48155 (R;SE;In Swedish)
NONAXIAL NUCLEI
See DEFORMED NUCLEI
NONDESTRUCTIVE TESTING
Information Needs
Needs assessment for nondestructive testing and materials characterization for improved reliability in structural ceramics for heat engines, 12:48140 (R;US)
Research Programs
EPRI Nondestructive Evaluation Center: 1986 annual report, 12:47470 (R;US)
Technology Assessment
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)
NON-EQUILIBRIUM PLASMA
Electromagnetic Radiation
Stationary electroacoustic p-polarized waves in nonisothermal plasma, 12:49070 (RA;SU;In Russian)
NONLINEAR PROBLEMS
Iterative Methods
Iterative solution of a nonlinear system arising in phase change problems, 12:47993 (R;US)
Numerical Solution
Iterative solution of a nonlinear system arising in phase change problems, 12:47993 (R;US)
Research Programs
Perturbation and characterization of nonlinear processes: Progress report, November 15, 1983-June 1, 1987, 12:49010 (R;US)
NONLINEAR SYSTEMS
See NONLINEAR PROBLEMS
NONMETALS
See also CARBON
HYDROGEN
NITROGEN
OXYGEN
RARE GASES
SULFUR
Crystal Defects
Theory of defects in non-metallic solids: Progress report, 1 August 1986 to 31 July 1987, 12:47894 (R;US)
NONRADIOACTIVE WASTE DISPOSAL
See WASTE DISPOSAL
NONRADIOACTIVE WASTES
See LIQUID WASTES
SOLID WASTES
WASTES
NORBORNADIENE
Thermodynamic Properties
Study of improved methods for predicting chemical equilibria: Technical progress report for the period July 1, 1986 to September 1, 1987, 12:47947 (R;US)
NORTH AMERICA
See also CANADA
USA
Air Quality
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)
Role of nitrogen oxides in nonurban ozone formation in the planetary boundary layer over N (North) America, W (Western) Europe, and adjacent areas of ocean, 12:48357 (R;US)
NORTHERN IRELAND
See UNITED KINGDOM
NORWAY
Continental Shelf
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)
Fallout
Determination of radioactive fallout after the Chernobyl accident (Norway), 12:47481 (R;NO;In Norwegian)
Radiation Monitoring
Determination of radioactive fallout after the Chernobyl accident (Norway), 12:47481 (R;NO;In Norwegian)
Radioactive fallout over Norway after the reactor accident in USSR. Radioactivity in foodstuffs 1986, 12:47480 (R;NO;In Norwegian)
Rivers
Environmental studies connected with establishing an incinerator plant in Trondheim. 4th quarterly report 1984, 12:48443 (R;NO;In Norwegian)
NOVA FACILITY
Antireflection Coatings
Solgel coatings for high-power laser application, 12:48120 (BA;US)
Reflective Coatings
Solgel coatings for high-power laser application, 12:48120 (BA;US)
N*RESONANCES
Particle Production
Spin modes, 12:48926 (RA;SU)
NSLS
Microscopes
An undulator based scanning microscope at the National Synchrotron Light Source, 12:48296 (BA;US)
Vacuum Pumps
Design studies of distributed ion pumps, 12:48104 (J;US)
NUCLEAR ACCIDENTS
See ACCIDENTS
NUCLEAR ATTACKS
See NUCLEAR WEAPONS
NUCLEAR CONTROVERSY
See HUMAN POPULATIONS
NUCLEAR DATA COLLECTIONS
Table of radioactive isotopes, 12:48874 (B;US)
NUCLEAR DEFORMATION
For deformation of not permanently deformed nuclei.
High Spin States
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)
NUCLEAR EMULSIONS
Particle Identification
Charged particle identification in an experiment with nuclear photoemulsion as a vertex detector, 12:48246 (R;SU;In Russian)

NUCLEAR ENERGY
Cancellation
Pros and cons of a nuclear phaseout, 12:47593 (R;DE;In German)
Decision Making
How fair is safe enough? The cultural approach to societal technology choice, 12:48450 (J;US)
Energy Source Development
How fair is safe enough? The cultural approach to societal technology choice, 12:48450 (J;US)
Institutional Factors
How fair is safe enough? The cultural approach to societal technology choice, 12:48450 (J;US)
Public Opinion
How fair is safe enough? The cultural approach to societal technology choice, 12:48450 (J;US)
Risk Assessment
How fair is safe enough? The cultural approach to societal technology choice, 12:48450 (J;US)
NUCLEAR EXPLOSION DETECTION
Seismic Detection
Source depths utilizing broad-band data. Final report, 11 April 1985-28 February 1987, 12:48310 (R;US)
NUCLEAR EXPLOSIONS
Specifically named single nuclear explosions are listed by name and the word EVENT, e.g., BOXCAR EVENT. All projects involving nuclear explosions are listed by the project name and the word PROJECT, e.g., PLOWSHARE PROJECT.
Containment
Fourth symposium on containment of underground nuclear explosions: Abstracts, 12:48303 (R;US)
Environmental Impacts
Nuclear Winter: The implications for civil defense, 12:48304 (R;US)
Fires
Global-effects simulation studies. Interim report (Final), April 1985-November 1986, 12:48301 (R;US)
In-Country Detection
On-site inspection for verification of a Comprehensive Test Ban Treaty, 12:47802 (R;US)
Meetings
Fourth symposium on containment of underground nuclear explosions: Abstracts, 12:48303 (R;US)
Physical Radiation Effects
Nuclear winter: the continuing debate. Student essay, 12:48302 (R;US)
Simulation
Vulnerability evaluation of the keyworker blast shelter. Final report, 12:49229 (R;US)
Stemming Materials
Stemming column phenomenology, 12:48298 (R;US)
NUCLEAR EXPLOSIVES
Safety
Simulated and rocket-triggered lightning testing of the Lightning-Invulnerable Device System (LIDS), 12:48307 (RA;US)
Testing
Fiber-Optic, Analog, Transmission System (FATS), 12:48308 (RA;US)
NUCLEAR FACILITIES
See also FEED MATERIALS PLANTS
FUEL REPROCESSING PLANTS
ISOTOPE SEPARATION PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Decommissioning
Decommissioning of nuclear facilities. Feasibility, needs and costs, 12:47476 (R;XN)
Nuclear Materials Management
Methods for recurring loss tests, 12:47248 (R;US)
Safeguards
Risk evaluation system for facility safeguards and security planning, 12:47244 (R;US)
Security
Risk evaluation system for facility safeguards and security planning, 12:47244 (R;US)
NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS
NUCLEAR FUELS
See also SPENT FUELS
Nondestructive Analysis
Calibration of the active well coincidence counter for cylindrical, high-enrichment uranium-aluminium fuel assemblies, 12:48232 (R;FR)
Reprocessing
Canyon solvent cleaning with activated alumina, 12:47196 (R;US)
Determination of uranium in solution using laser-induced breakdown spectroscopy, 12:47197 (J;US)
NUCLEAR INSURANCE
Impact of proposed financial assurance requirements on nuclear materials licensees, 12:47581 (R;US)
NUCLEAR LOG
See RADIOACTIVITY LOGGING
NUCLEAR MAGNETIC RESONANCE
Sample Preparation
Trifunctional catalysts for conversion of syngas to alcohols: Twelfth quarterly report for period June 1, 1987 to August 31, 1987, 12:47266 (R;US)
NUCLEAR MATERIALS MANAGEMENT
Accounting
Methods for recurring loss tests, 12:47248 (R;US)
NUCLEAR MATTER
Fast hadron energy losses by excitation of nuclear matter, 12:48921 (R;SU;In Russian)
Transparency, stopping power and thermalization of nuclear matter in the Ca+Ca and Nb+Nb reactions at E/A=400 MeV: classical equation of motion approach, 12:48923 (R;SU)
Color Model
Nuclear binding and quark confinement, 12:48953 (R;FR)
Equations of State
Relativistic nuclear fluid dynamics and VUU kinetic theory, 12:48956 (R;US)
NUCLEAR MEDICINE
Contamination
Decontamination of radiopharmaceuticals, 12:47217 (RA;CS;In Czech)
NUCLEAR MODELS
See also COLLECTIVE MODEL
CRANKING MODEL
PARTICLE-CORE COUPLING MODEL
QUASIPARTICLE-PHONON MODEL
Model for the nuclear effects of the d-t-muon fusing state, 12:48875 (R;US)
NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Experimental and theoretical physics. Collection, 12:48910 (R;SU;In Russian)
JINR rapid communications. Collection, 12:48746 (R;SU;In Russian)
Research Programs
Annual report of the Tandem Accelerator Center, University of Tsukuba, April 1, 1985-March 31, 1986, 12:49162 (R;JP)
Cyclotron based nuclear science: Progress report, April 1, 1986-March 31, 1987, 12:48866 (R;US)
Electron interactions with nuclei: Progress report, 12:48867 (R;US)
Nuclear excitations and reaction mechanisms: Progress report: [1 August 1986-31 July 1987], 12:48904 (R;US)
Physics Division annual review, 1 April 1986-31 March 1987 (ATLAS facility), 12:48900 (R;US)
Triangle Universities Nuclear Laboratory: Annual report, TUNL XXVI, 1 September 1986-31 August 1987, 12:48865 (R;US)
Weak Interactions
Physics Division annual review, 1 April 1986-31 March 1987 (ATLAS facility), 12:48900 (R;US)
NUCLEAR POWER
Energy Policy
Background paper: Soviet energy policy, 12:47599 (RA;SE)
Fuel Cycle
World nuclear fuel cycle requirements, 1987, 12:47604 (R;US)

NUCLEAR POWER PLANTS
Regulatory simplification of fission product chemistry, 12:47511 (RA;US)
Building Codes
Preparation of design specifications and design reports for pumps, valves, piping, and piping supports used in safety-related portions of nuclear power plants, 12:47437 (R;US)
Computer Codes
Matrix-based approach to uncertainty and sensitivity analysis for fault trees, 12:47594 (J;US)
Computerized Control Systems
Incorporating "fuzzy" data and logical relations in the design of expert systems for nuclear reactors, 12:47439 (R;US)
Construction
Planning and construction of nuclear power plants in Yugoslavia, 12:47428 (RA;DE;In German)
Possible scope of international cooperation in the planning and construction of nuclear power plants and systems, 12:47429 (RA;DE;In German)
Preparation of design specifications and design reports for pumps, valves, piping, and piping supports used in safety-related portions of nuclear power plants, 12:47437 (R;US)
Cost Benefit Analysis
Integrated model for sensitivity and cost/benefit analysis for severe accidents, 12:47515 (RA;US)
Cost Estimation
Cost estimate guidelines for advanced nuclear power technologies, 12:47421 (R;US)
Data Acquisition Systems
Development of a testing and analysis methodology to determine the functional condition of solenoid operated valves, 12:47534 (R;US)
Design
Integrated model for sensitivity and cost/benefit analysis for severe accidents, 12:47515 (RA;US)
Electrical Equipment
Qualification of class 1e equipment: regulation, technological margins and test experience, 12:47462 (R;FR;In French and English)
Energy Supplies
Special conference on thermal energy 'Yugoslavia 1986'. Proceedings, 12:47345 (R;DE;In German)
Environmental Impacts
Assessing power plant impacts on fish populations at Northeast Utilities sites: winter flounder studies at Millstone Nuclear Power Station, 12:47448 (RA;US)
Cooling ponds and small rivers in north central United States, 12:47447 (RA;US)
Expert Systems
Incorporating "fuzzy" data and logical relations in the design of expert systems for nuclear reactors, 12:47439 (R;US)
Fault Tree Analysis
Matrix-based approach to uncertainty and sensitivity analysis for fault trees, 12:47594 (J;US)
Loss of Coolant
Post-loca shielding design review for the Koeberg nuclear power station, 12:47420 (RA;ZA)
Monitoring
Automated long-term surveillance of a commercial nuclear power plant, 12:47445 (R;US)
Planning
Possible scope of international cooperation in the planning and construction of nuclear power plants and systems, 12:47429 (RA;DE;In German)
Radiation Hazards
CNS cancers and radiation exposure: a case-control study among workers at two nuclear facilities, 12:48515 (J;US)
Radiation Monitoring
Quality control measurements of airborne radionuclides from nuclear power plants in the Federal Republic of Germany, 12:47548 (J;US)
Radioactive Effluents
Quality control measurements of airborne radionuclides from nuclear power plants in the Federal Republic of Germany, 12:47548 (J;US)
Reactor Control Systems
Causes and effects of vital instrumentation and control power supply bus failures, 12:47550 (J;US)
Reactor Safety
Causes and effects of vital instrumentation and control power supply bus failures, 12:47550 (J;US)
Comparison of national safety concepts for nuclear power plants, 12:47475 (RA;DE;In German)
Development of safety goals for nuclear power plants, 12:47536 (J;US)
New procedure for the safe, economical seismic design of components of nuclear plant facilities at low and moderate seismicity sites, 12:47537 (J;US)
Understanding aging: a key to ensuring safety, 12:47546 (J;US)
Risk Assessment
Matrix-based approach to uncertainty and sensitivity analysis for fault trees, 12:47594 (J;US)
Safety
Special conference on thermal energy 'Yugoslavia 1986'. Proceedings, 12:47345 (R;DE;In German)
Secondary Coolant Circuits
Prediction and mitigation of erosive-corrosive wear in secondary piping systems of nuclear power plants, 12:47438 (R;US)
Seismic Effects
New procedure for the safe, economical seismic design of components of nuclear plant facilities at low and moderate seismicity sites, 12:47537 (J;US)
Sensitivity Analysis
Integrated model for sensitivity and cost/benefit analysis for severe accidents, 12:47515 (RA;US)
Shielding
Post-loca shielding design review for the Koeberg nuclear power station, 12:47420 (RA;ZA)
Steam Generators
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
Motivation of parametric studies. French recommendations concerning surveillance in exploitation. Program of steam generator inspection, 12:47463 (R;FR;In French)
Steam Turbines
Turbine protection system evaluation: Final report, 12:47435 (R;US)
Transient Overpower Accidents
Matrix-based approach to uncertainty and sensitivity analysis for fault trees, 12:47594 (J;US)
Valves
Development of a testing and analysis methodology to determine the functional condition of solenoid operated valves, 12:47534 (R;US)
NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS
NUCLEAR REACTION KINETICS
Three-Dimensional Calculations
Relativistic nuclear fluid dynamics and VUU kinetic theory, 12:48956 (R;US)
NUCLEAR REACTIONS
See also CHARGE-EXCHANGE REACTIONS
FISSION
HADRON REACTIONS
HEAVY ION FUSION REACTIONS
LEPTON REACTIONS
PHOTONUCLEAR REACTIONS
Matrix Elements
Nuclear wave functions for three particle states, 12:48969 (J;US)
NUCLEAR REACTORS
See REACTORS
NUCLEAR SAFETY
See RADIATION PROTECTION
NUCLEAR SPIN RESONANCE

NUCLEAR STRUCTURE
Density Matrix
Is the saddle-point-method a proper approximation for nuclear level density?, 12:48918 (R;JP)

Isospin
RPA spin-isospin nuclear response in the deep inelastic region, 12:48952 (R;FR)
Mathematical Models
MONSTER studies of nuclear structure problems (MONSTER and VAMPIR are the microscopic models for the nuclear structure description in the all mass regions), 12:48931 (RA;SU)
Meetings
Nuclear structure. Proceedings of the International School on Nuclear Structure, 12:48944 (R;SU)
Nucleon-Nucleon Interactions
(p, n) reaction and the nucleon-nucleon force, 12:48833 (J;GB)
Quark Model
Do quarks play an explicit role as nuclear constituents?, 12:48812 (R;JP)
Relativistic Range
About nucleon-nucleon potential: meson exchange currents and relativistic approach of nuclear structure, 12:48920 (R;FR;In French)
Spin
RPA spin-isospin nuclear response in the deep inelastic region, 12:48952 (R;FR)

NUCLEAR THEORY
Giant Resonance
Phase space in nuclear dynamics, 12:48935 (RA;SU)

NUCLEAR WASTES
See RADIOACTIVE WASTES

NUCLEAR WEAPON TESTS
See NUCLEAR EXPLOSIONS

NUCLEAR WEAPONS
Accidents
ARGX-87: Accident Response Group Exercise, 1987: A Broken Arrow mini exercise (Training), 12:48306 (R;US)
Electromagnetic Pulses
The effects of corona on current surges induced on conducting lines by EMP [electromagnetic pulse]: A comparison of experiment data with results of analytic corona models, 12:47368 (R;US)
Theft
Risk analysis of terrorist attacks, 12:48309 (J;US)
Warfare
Development of a liquid isotonic ration for consumption in an NBC (nuclear, biological, or chemical) environment. Final report, August 1982-September 1983, 12:47796 (R;US)

NUCLEAR WINTER
Nuclear Winter: The implications for civil defense, 12:48304 (R;US)
Reviews
Nuclear winter: the continuing debate. Student essay, 12:48302 (R;US)
Smokes
Global-effects simulation studies. Interim report (Final), April 1985-November 1986, 12:48301 (R;US)
Soot
Global-effects simulation studies. Interim report (Final), April 1985-November 1986, 12:48301 (R;US)

NUCLEI

DEFORMED NUCLEI
EVEN-EVEN NUCLEI
EVEN-ODD NUCLEI
HEAVY NUCLEI
INTERMEDIATE MASS NUCLEI
LIGHT NUCLEI
MAGIC NUCLEI
MIRROR NUCLEI
ODD-EVEN NUCLEI
Antiproton Reactions
Experiments on eta-meson production, 12:48965 (J;US)
Cooper Pairs
On triplet pairing in nuclei, 12:48927 (RA;SU;In Russian)
Decay
Fission decay modes with compact shapes, heavy clusters emission and the superheavy nuclei, 12:48943 (RA;SU)
Microscopic approach to description of heavy-particle decay of nuclei, 12:48942 (RA;SU;In Russian)
New modes of nuclear decay, 12:48941 (RA;SU;In Russian)
Nucleon Reactions
Energy dependence of the relativistic effects in the Dirac-equation-based models of scattering of nucleons from nuclei, 12:48971 (J;US)
Particle Production
Experiments on eta-meson production, 12:48965 (J;US)
Pion Reactions
Experiments on eta-meson production, 12:48965 (J;US)
Proton Reactions
Experiments on eta-meson production, 12:48965 (J;US)
Superfluid Model
On triplet pairing in nuclei, 12:48927 (RA;SU;In Russian)

NUCLEON ISOBARS
*See N*RESONANCES*

NUCLEON-ANTINUCLEON INTERACTIONS
See also PROTON-ANTIPROTON INTERACTIONS
Quark Model
Microscopic approaches to NN-bar annihilation potentials, 12:48964 (J;US)

NUCLEON-NUCLEON INTERACTIONS
Charge Exchange
(p, n) reaction and the nucleon-nucleon force, 12:48833 (J;GB)
Lagrangian Field Theory
Nucleon-nucleon force from a chiral Lagrangian with omega-stabilization, 12:48963 (J;US)
Nuclear Structure
(p, n) reaction and the nucleon-nucleon force, 12:48833 (J;GB)
Quark Model
Nucleon-nucleon interaction and the quark model, 12:48822 (RA;SU)

NUCLEON-NUCLEON POTENTIAL
See also SKYRME POTENTIAL
Boson-Exchange Models
About nucleon-nucleon potential: meson exchange currents and relativistic approach of nuclear structure, 12:48920 (R;FR;In French)

NUCLEONS
See also NEUTRONS
PROTONS
Color Model
Nuclear binding and quark confinement, 12:48953 (R;FR)
Excited States
About energy degeneracy of some nucleon excited states in the Skyrme model, 12:48853 (R;SU;In Russian)
Research Programs
Theoretical studies of phenomenological models of nuclear chromodynamics: Progress report, January 1, 1987-December 31, 1987, 12:48779 (R;US)

NUCLEOPROTEINS
Biochemical Reaction Kinetics
Binding of HeLa cell nuclear proteins to a human chromosome 9 specific repetitive DNA sequence, 12:48454 (J;US)
Molecular Biology
Binding of HeLa cell nuclear proteins to a human chromosome 9 specific repetitive DNA sequence, 12:48454 (J;US)

O

OAK RIDGE NATIONAL LABORATORY
See ORNL

OAK RIDGE RESEARCH REACTOR
See ORR REACTOR

OAKS
Roots
Organic matter and nutrients associated with fine root turnover in a white oak stand (Quercus albus), 12:47308 (J;US)

OCCUPATIONAL DISEASES
Monitoring
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1985, 12:47118 (R;US)

Risk Assessment
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)
Victims Compensation
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)
Workmens Compensation
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)

OCCUPATIONAL EXPOSURE
Data Base Management
Development and application of algorithms for generating estimates of toxicity for the NOHS (National Occupational Hazard Survey) data base. Technical report, 12:48528 (R;US)
Manuals
NIOSH (National Institute for Occupational Safety and Health) pocket guide to chemical hazards. Second edition, 12:48529 (R;US)
Variations
Variation of workplace atmospheres, 12:48318 (R;US)

OCCUPATIONAL SAFETY
Evaluation of a coated-filter sampling method for the determination of isocyanate concentrations in air, 12:48341 (R;US)
Formaldehyde-exposure characterization in garment-manufacturing plants: a composite summary of three in-depth industrial-hygiene surveys, 12:48342 (R;US)
Health-Hazard Evaluation report HETA 84-496-1766, Applied Plastics, Slocum, Rhode Island, 12:48336 (R;US)
Health-Hazard Evaluation Report HETA 86-070-1774, Silver Deer Spectrum, Boulder, Colorado, 12:48337 (R;US)
Health-Hazard Evaluation Report HETA 85-195-1768, Dale Electronics, Incorporated, Norfolk, Nebraska, 12:48338 (R;US)
Health-Hazard Evaluation Report HETA 86-328-1773, Memorial Hospital of Southern Oklahoma, Ardmore, Oklahoma, 12:48339 (R;US)
Health-Hazard Evaluation Report HETA 85-150-1767, Warwick Fire Department, Warwick, Rhode Island, 12:48340 (R;US)
Health-Hazard Evaluation Report HETA 86-410-1772, HCFA-Meadows East Building, Baltimore, Maryland, 12:48345 (R;US)
Health-Hazard Evaluation Report HETA 86-130-1775, Owens-Illinois Glass Container Division, Hapeville, Georgia, 12:48350 (R;US)
Health-Hazard Evaluation Report HETA 85-111-1770, Feed Materials Production Center, Fernald, Ohio, 12:47193 (R;US)
Industry-wide studies report of an in-depth survey at Firestone Synthetic Rubber and Latex Company, Lake Charles, Louisiana, 12:48344 (R;US)
Preliminary survey report: evaluation of brake-drum service controls at Pennsylvania Bureau of Vehicle Management, Vehicle Maintenance Division, Harrisburg, Pennsylvania, 12:48343 (R;US)
Preliminary survey report: control technology for gallium arsenide processing at Morgan Semiconductor Division, Garland, Texas, 12:48352 (R;US)

ODD-EVEN NUCLEI
Odd protons, even neutrons.

OFFSHORE DRILLING
Environmental Impacts
Barrow Arch transportation-systems impact analysis. Social and economic studies program technical report number 104. Final report, 12:47159 (R;US)
Beaufort Sea petroleum technology assessment. Social and economic studies program technical report number 112. Final report, 12:47160 (R;US)
Coastal oceanography of the northeastern Gulf of Alaska. Final report, 12:47126 (R;US)
Environmental impact statement. Proposed Norton Basin Sale 100. Volume 2, 12:47158 (R;US)
Final environmental impact statement. Proposed Norton Basin Sale 100. Volume 1, 12:47157 (R;US)
Research to determine the accumulation of organic constituents and heavy metals from petroleum-impacted sediments by marine detritivores of the Alaskan Outer Continental Shelf. Final report, 12:47155 (R;US)
Exploratory Wells
Monitoring oil-exploration activities in the Beaufort Sea. Social and economic studies program technical report Number 107. Final report, 12:47127 (R;US)
Oil Spills
Suspended particulate matter distribution, transport, and physical characteristics in the North Aleutian Shelf and St. George Basin lease areas, 12:47156 (R;US)
Socio-Economic Factors
Monitoring oil-exploration activities in the Beaufort Sea. Social and economic studies program technical report Number 107. Final report, 12:47127 (R;US)

OFFSHORE OPERATIONS
Ships
Unimak Pass vessel analysis. Social and economic studies program technical report number 108. Final report, 12:47161 (R;US)

OFFSHORE PLATFORMS
Includes gravity or fixed, floating, and towed platforms.
Comparative Evaluations
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)
Scale Models
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)

Wind Loads
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)

OIL FIELDS
Resource Management
Petroleum field optimization. Comments on models and solution techniques, 12:47132 (R;NO)

OIL SAND OILS
See BITUMENS

OIL SANDS
Steam Injection
Organic solute profile of water from two commercial tar sand processes, 12:47190 (R;US)
Proposed water treatment approach for commercial tar sand wastewaters, 12:47188 (R;US)
Wet-air oxidation of TS-1S wastewater, 12:47189 (R;US)
Thermal Recovery
Preliminary evaluation of chemical indicators for the analysis of production losses from tar sand recovery, 12:47182 (R;US)

OIL SHALE DEPOSITS
Resource Assessment
Developments in oil shale in 1986, 12:47187 (R;US)
Resource Development
Developments in oil shale in 1986, 12:47187 (R;US)

OIL SHALE INDUSTRY
Global Aspects
Developments in oil shale in 1986, 12:47187 (R;US)
Production
Developments in oil shale in 1986, 12:47187 (R;US)

Methane contents of oil shale from the Piceance Basin, Colorado. Report of investigations/1987, 12:47185 (R;US)
Modified In-Situ Processes
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis; Residual brine treated by wet-air oxidation, 12:47191 (R;US)
Particle Size
Review of oil shale comminution technology (65 references), 12:47183 (R;US)
Physical Properties
Review of needs for thermophysical property data on solid feedstocks. 2. Oil shale, 12:47184 (R;US)
Thermodynamic Properties
Review of needs for thermophysical property data on solid feedstocks. 2. Oil shale, 12:47184 (R;US)

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Biological Effects
Recolonisering of oil polluted beaches, 12:47154 (R;SE;In Swedish)
Total Suspended Particulates
Suspended particulate matter distribution, transport, and physical characteristics in the North Aleutian Shelf and St. George Basin lease areas, 12:47156 (R;US)

OIL WELLS
Production
Naval Petroleum Reserve No. 2: Buena Vista Oil and Gas Field, Kern County, California: Proved reserves, Developed and undeveloped, Sections 6 and 8: Development history and exploitation techniques, Effective July 1, 1987: [Final technical report], 12:47133 (R;US)
Well Pressure
GASKICK - a knowledge based system for drilling supervision and gas kick detection, 12:47142 (R;NO)

OIL YIELDS
Losses
Preliminary evaluation of chemical indicators for the analysis of production losses from tar sand recovery, 12:47182 (R;US)

OIL-WATER SEPARATORS
See SEPARATION EQUIPMENT

OMEGA-784 RESONANCES
Photoproduction
rho^{0}pi production in photon photon interactions, 12:48768 (R;US)

OPACITY
Air Pollution Monitors
Performance audit procedures for opacity monitors, 12:48356 (R;US)

OPTICAL DENSITY
See OPACITY

OPTICAL FIBERS
Physical Radiation Effects
Behavior of fluoride glass optical fibers under gamma irradiation, 12:47889 (R;FR;In French)

OPTICAL FILTERS
Fabrication
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)
Superlattices
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)
Tuning
Optically tuned, all-semiconductor optical interference filter, 12:47916 (J;US)

OPTICAL MODELS
Oxygen 18 Reactions
Transfer reactions at high energy and ambiguities in heavy-ion potentials, 12:48957 (J;DE)

OPTICAL SPECTROMETERS
Performance
Multiplex advantage in Hadamard transform spectrometry utilizing solid-state encoding masks with uniform, bistable optical transmission defects, 12:49045 (J;US)
Signal-to-Noise Ratio
Multiplex advantage in Hadamard transform spectrometry utilizing solid-state encoding masks with uniform, bistable optical transmission defects, 12:49045 (J;US)

OPTICAL SYSTEMS
Design
X-ray multilayer optic development for plasma diagnostic and source enhancement, 12:49113 (BA;US)
Image Tubes
X-ray multilayer optic development for plasma diagnostic and source enhancement, 12:49113 (BA;US)

OPTICS
Fundamentals and techniques of nonimaging optics research: Final report, 12:48093 (R;US)

OPTIMIZATION
Meetings
SIAM [Society for Industrial and Applied Mathematics] conference on optimization, 18-20, 1987, 12:49180 (R;US)

ORDNANCE
Theft
Risk analysis of terrorist attacks, 12:48309 (J;US)

Ecological Concentration
Indoor exposure assessment, 12:48325 (RA;US)
Volatile organic contaminants in indoor air, 12:48324 (RA;US)

Graphs
Graph theoretical approach to Moebius systems in organic chemistry, 12:47951 (RA;US)

Removal
A study of micellar-enhanced ultrafiltration: Final technical report, March 1, 1984-February 28, 1987, 12:48424 (R;US)

Risk Assessment
Indoor exposure assessment, 12:48325 (RA;US)

Separation Processes
Separation of dilute hazardous organics by low-pressure composite membranes. Final report, April 1985-December 1986, 12:48432 (R;US)

Synthesis
A useful by-product expert system, 12:47986 (R;US)

Topology
Graph theoretical approach to Moebius systems in organic chemistry, 12:47951 (RA;US)

ORGANIC HALOGEN COMPOUNDS

See also ORGANIC BROMINE COMPOUNDS

Labelling
Synthesis of no-carrier-added (NCA) [18F]fluoroalkyl halides and their application in the syntheses of [^{18}F]fluoroalkyl derivatives of neurotransmitter receptor active compounds, 12:48083 (J;GB)

ORGANIC NITROGEN COMPOUNDS

Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.

See also NITRO COMPOUNDS
PORPHYRINS

Alkylation
Application of the nucleophilic substitution reactions to the synthesis of no-carrier-added (NCA) ^{18}F-labeled radioligands, 12:48085 (J;GB)

Chemical Reactions
Characterization of the charge-transfer reaction between decamethylferrocene and 7,7,8,8-tetracyano-p-quinodimethane (1:1). The ^{57}Fe moessbauer spectra and structures of the paramagnetic dimeric and the metamagnetic one-dimensional salts and the molecular and electronic structures of [TCNQ]/sup n/ (n = 0, -1, -2), 12:48000 (J;US)

Electronic Structure
Characterization of the charge-transfer reaction between decamethylferrocene and 7,7,8,8-tetracyano-p-quinodimethane (1:1). The ^{57}Fe moessbauer spectra and structures of the paramagnetic dimeric and the metamagnetic one-dimensional salts and the molecular and electronic structures of [TCNQ]/sup n/ (n = 0, -1, -2), 12:48000 (J;US)

Labelling
Application of the nucleophilic substitution reactions to the synthesis of no-carrier-added (NCA) ^{18}F-labeled radioligands, 12:48085 (J;GB)
Synthesis of no-carrier-added (NCA) [18F]fluoroalkyl halides and their application in the syntheses of [^{18}F]fluoroalkyl derivatives of neurotransmitter receptor active compounds, 12:48083 (J;GB)
Synthesis of [^{11}C]SCH 23390 for dopamine D1 receptor studies, 12:48084 (J;GB)

Molecular Structure
Characterization of the charge-transfer reaction between decamethylferrocene and 7,7,8,8-tetracyano-p-quinodimethane (1:1). The ^{57}Fe moessbauer spectra and structures of the paramagnetic dimeric and the metamagnetic one-dimensional salts and the molecular and electronic structures of [TCNQ]/sup n/ (n = 0, -1, -2), 12:48000 (J;US)

ORGANIC OXYGEN COMPOUNDS

Excluding HYDROXY COMPOUNDS, CARBONIC ACID DERIVATIVES, LIPIDS, STEROIDS, CARBOHYDRATES, ORGANIC ACIDS, ALDEHYDES, KETONES and ESTERS.

Chemical Analysis
Experimental electron beam microanalytical procedure for determining oxygen in coal, 12:47049 (J;GB)

ORGANIC PHOSPHORUS COMPOUNDS

Excluding NUCLEIC ACIDS and NUCLEOTIDES.

See also PHOSPHOLIPIDS

Labelling
Problems of synthesis and analysis of phosphonium compounds. 1. [/sup 14/C]alkyl- and aryl-[/sup 14/C]alkyl-triphenylphosphonium halogenides, 12:48059 (RA;DD;In German)

ORGANIC POLYMERS

See also POLYAMIDES
POLYETHYLENE GLYCOLS
POLYVINYLS

Decontamination
Decontamination of organic polymer surfaces, 12:47241 (RA;CS;In Czech)

Luminescence
The influence of polymer structure on triplet luminescence, 12:47892 (R;US)

Phosphorescence
Migration and transfer of triplet energy in selected polymer systems, 12:47891 (R;US)

ORGANIC SOLVENTS

Aerosols
Health-Hazard Evaluation report HETA 84-496-1766, Applied Plastics, Slocum, Rhode Island, 12:48336 (R;US)

Cleaning
Canyon solvent cleaning with activated alumina, 12:47196 (R;US)

Deuteration
Heteroatom containing organics during liquefaction, 7/1/87-7/1/88, 12:47022 (R;US)

Hydrolysis
Studies on the hydrolysis of the extracting solvent TBP/tetrachloro ethane and its regeneration by alkaline washing, 12:48040 (RA;DD;In German)

Regeneration
Studies on the hydrolysis of the extracting solvent TBP/tetrachloro ethane and its regeneration by alkaline washing, 12:48040 (RA;DD;In German)

ORGANIC WASTES

Combustion Products
Evaluation of combustion processes for destruction of liquid organic wastes, GA Technologies, Incorporated, 12:48347 (R;US)

ORGANOMETALLIC COMPOUNDS

For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.

Dissociation
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2^+$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)

Electronic Structure
Graph theory in the study of metal cluster bonding topology: applications to metal clusters having fused polyhedra, 12:47954 (RA;US)

Photochemical Reactions
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2^+$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)

ORNL
Environment
Preliminary long-range environmental management plan: Program overview and summary, 12:47582 (R;US)
Proposals
Background information and technical basis for assessment of environmental implications of magnetic fusion energy (Engineering Test Reactor), 12:49120 (RA;US)
FEDC/ORNL role in ETR design (Engineering Test Reactor), 12:49118 (RA;US)
Proposal for ORNL physics support for Tiber (Engineering Test Reactor), 12:49117 (RA;US)
Proposals for ORNL [Oak Ridge National Laboratory] support to Tiber LLNL [Lawrence Livermore National Laboratory] (Engineering Test Reactor), 12:49115 (R;US)
Proposed ORNL development and technology engineering test reactor roles (Engineering Test Reactor), 12:49119 (RA;US)
Review of ORNL support for LLNL ETR effort (Engineering Test Reactor), 12:49116 (RA;US)
Research Programs
FEDC/ORNL role in ETR design (Engineering Test Reactor), 12:49118 (RA;US)
Proposal for ORNL physics support for Tiber (Engineering Test Reactor), 12:49117 (RA;US)
Waste Management
PCB [polychlorinated biphenyls] annual report for Oak Ridge National Laboratory, 1986 (Polychlorinated biphenyls), 12:49154 (R;US)
ORNL RESEARCH REACTOR

OUTPUT
See PRODUCTION
OVERHEAD POWER TRANSMISSION
Comparative Evaluations
12-phase as a transmission alternative, 12:47363 (R;US)
EHV AC Systems
12-phase as a transmission alternative, 12:47363 (R;US)
OXOPROPANE
See ACETONE
OXYGEN
Chemical Reactions
Kinetics of the reaction between methyl radicals and oxygen atoms between 294 and 900 K, 12:48090 (J;US)
Consumption Rates
Assessment of oxygen depletion by inorganic constituents at the Pittsfield, Illinois compressed air energy storage site, 12:47559 (RA;US)
Evaluation of microbiological depletion of oxygen in the Pittsfield, Illinois CAES site, 12:47560 (RA;US)
Energy Gap
Ab-initio MO electronic structure calculations of defect-pair complexes in silicon, 12:47983 (RA;US)
Quantitative Chemical Analysis
Experimental electron beam microanalytical procedure for determining oxygen in coal, 12:47049 (J;GB)
OXYGEN 16
Isotope Separation
INS gas-filled recoil isotope separator, 12:47249 (R;JP)
OXYGEN 16 TARGET
Heavy Ion Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
Lanthanum 139 Reactions
Charge and transverse momentum distributions from the fragmentation of 1.2 GeV per nucleon /sup 139/La nuclei, 12:48884 (J;US)
Pion Plus Reactions
Nuclear dynamics of bound eta mesons: Eta-mesic nuclei and mesic compound-nucleus resonances, 12:48950 (R;US)
OXYGEN 18
Natural Occurrence
Natural isotopic labelling in precipitation and initial formation of groundwater, 12:48420 (R;DE;In German)
OXYGEN 18 REACTIONS
Potential Scattering
Transfer reactions at high energy and ambiguities in heavy-ion potentials, 12:48957 (J;DE)
OXYGEN COMPOUNDS

OXYGEN IONS
Ion-Atom Collisions
L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions, 12:48731 (J;US)
OXYGEN PLANTS
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Design
Oxygen plants for coal gasification: Experience at the Cool Water GCC [gasification combined cycle] Power Plant: Final report, 12:47024 (R;US)
Energy Consumption
Oxygen plants for coal gasification: Experience at the Cool Water GCC [gasification combined cycle] Power Plant: Final report, 12:47024 (R;US)
Performance Testing
Oxygen plants for coal gasification: Experience at the Cool Water GCC [gasification combined cycle] Power Plant: Final report, 12:47024 (R;US)

OXYGENASES
Code number 1.13
Molecular Structure
Subunit interactions of ribulose bisphosphate carboxylase/oxygenase as determined by chemical cross-linking and site-directed mutagenesis, 12:48456 (J;US)
OXYMETHYLENE
See FORMALDEHYDE
OZONE
Air Pollution
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)
Air Pollution Monitoring
Relationships involving fine-particle mass, fine-particle sulfur, and ozone during episodic periods at sites in and around St. Louis, Missouri, 12:48361 (R;US)
Atmospheric Chemistry
Heavy ozone in the stratosphere, 12:48311 (R;GB)
Environmental Effects
Air quality standard for SO_2 and particles (Directive 80-779-EEC) and its significance for the other main air pollutants, 12:48320 (R;XE)
Health Hazards
Air quality standard for SO_2 and particles (Directive 80-779-EEC) and its significance for the other main air pollutants, 12:48320 (R;XE)
Production
Role of nitrogen oxides in nonurban ozone formation in the planetary boundary layer over N (North) America, W (Western) Europe, and adjacent areas of ocean, 12:48357 (R;US)
Radiolysis
Gamma-ray initiated decomposition of aqueous ozone solutions, 12:48032 (J;GB)

P

P CODES
Hanford Meteorological Station computer codes: Volume 2, The PROD computer code, 12:48312 (R;US)
PADE APPROXIMATION
Diagonal Pade approximations for initial value problems, 12:49097 (R;US)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PALLADIUM
Catalytic Effects
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
Sorptive Properties
The effect of additives on the reactivity of palladium surfaces for the chemisorption and hydrogenation of carbon monoxide: A surface science and catalytic study, 12:47990 (R;US)
PALLADIUM ALLOYS
Electronic Structure
Electronic structure of UPd/sub 3/ - a localized f compound, 12:47847 (J;NL)
Radiation Scattering Analysis
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
Rutherford Scattering
Heavy ion Rutherford backscattering analysis used to study alloyed metal/GaAs interface, 12:47939 (R;FR)
PALLADIUM COMPOUNDS
Bubbles
NMR evidence for solid-fluid transition near 250 K of ^{3}He bubbles in palladium tritide (NUCLEAR MAGNETICRESONANCE), 12:47872 (J;US)
PAPER
Waste Product Utilization
Meaning of wastepaper use in the energy economy of newsprint production, 12:47699 (R;FI;In Finnish)
Wastes
Meaning of wastepaper use in the energy economy of newsprint production, 12:47699 (R;FI;In Finnish)
PAPER INDUSTRY
Energy Conservation
Meaning of wastepaper use in the energy economy of newsprint production, 12:47699 (R;FI;In Finnish)
Energy Consumption
Energy use by SCA-Nordliner at Munksund (Energy audits in the pulp and paper industry), 12:47706 (R;SE;In Swedish)
Meaning of wastepaper use in the energy economy of newsprint production, 12:47699 (R;FI;In Finnish)
Fuel Substitution
Use of domestic fuels in kraft pulp mill lime kilns, 12:47701 (R;FI;In Finnish)
Industrial Plants
Effect of new cooking methods on the optimization of the energy consumption of the sulphate pulp mill, 12:47698 (R;FI;In Finnish)
Recycling
Understanding paper recycling. Technical paper, 12:47591 (R;US)
Waste Heat Utilization
Effect of new cooking methods on the optimization of the energy consumption of the sulphate pulp mill, 12:47698 (R;FI;In Finnish)
Waste Product Utilization
Meaning of wastepaper use in the energy economy of newsprint production, 12:47699 (R;FI;In Finnish)
PARABANIC ACID

Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Radiolysis
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
PERSONAL COMPUTERS
(Prior to April 1985 this information was indexed to microprocessors.)
Uses
Personal and organizational consequences of microcomputer use in the Naval Military Personnel Command, 12:49211 (R;US)
Personal computers: A powerful tool for project management, 12:49215 (R;US)
PERTECHNETATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Labelling
Studies on the isolation of pure /sup 99/Tc-pertechnetate from Tc-ligand residues, 12:48044 (RA;DD;In German)
Solvent Extraction
Extraction and anion exchange behavior of molybdate and pertechnetate ions, 12:48041 (RA;DD;In German)
PETROCHEMICAL FEEDSTOCKS
See CHEMICAL FEEDSTOCKS
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
Chemical Analysis
Polycyclic aromatic hydrocarbon dermal tumorigens, 12:47044 (J;GB)

Chemical Composition
Biogeochemical studies of crude oil stored in the United States' strategic petroleum reserve, 12:47166 (BA;US)
Chemical Properties
Biogeochemical studies of crude oil stored in the United States' strategic petroleum reserve, 12:47166 (BA;US)
Chemical Reactions
Biogeochemical studies of crude oil stored in the United States' strategic petroleum reserve, 12:47166 (BA;US)
Demand
Retrospective simulation of oil demand and crude oil production. A basis for crude oil prices scenarios, 12:47145 (R;NO)
Enhanced Recovery
Carboxymethylated ethoxylated surfactants: Annual report, 12:47134 (R;US)
Imports
Oil imports and the foreign debt of developing African countries, 12:47597 (R;US)
Market
An assessment of the quality of selected EIA [Energy Information Administration] data series: Petroleum supply data, 12:47150 (R;US)
Petroleum supply monthly, June 1987, 12:47149 (R;US)
Weak form efficiency of the International Petroleum Exchange, 12:47144 (R;NO)
Prices
A compact model of oil supply disruptions, 12:47153 (R;US)
Oil imports and the foreign debt of developing African countries, 12:47597 (R;US)
Retrospective simulation of oil demand and crude oil production. A basis for crude oil prices scenarios, 12:47145 (R;NO)
Production
Retrospective simulation of oil demand and crude oil production. A basis for crude oil prices scenarios, 12:47145 (R;NO)
Quantitative Chemical Analysis
Biogeochemical studies of crude oil stored in the United States' strategic petroleum reserve, 12:47166 (BA;US)
Statistical Data
An assessment of the quality of selected EIA [Energy Information Administration] data series: Petroleum supply data, 12:47150 (R;US)
Supply and Demand
A compact model of oil supply disruptions, 12:47153 (R;US)
Supply Disruption
A compact model of oil supply disruptions, 12:47153 (R;US)
Taxes
Alternative petroleum taxation systems. Comparisons under uncertainty, 12:47148 (R;NO)
Underground Storage
Biogeochemical studies of crude oil stored in the United States' strategic petroleum reserve, 12:47166 (BA;US)
Gulf coast salt domes and the strategic petroleum reserve, 12:47165 (BA;US)
Strategic Petroleum Reserve quarterly report, 12:47163 (R;US)

PETROLEUM COKE

PION MINUS REACTIONS
Nuclear Reaction Kinetics
Deuteron production and space-time characteristics of high-energy hadron-nucleus reactions, 12:48922 (R;SU)
Particle Production
Correlations of cumulative hadrons in hadron-nuclear interactions, 12:48761 (R;SU;In Russian)
PION MINUS-DEUTERON INTERACTIONS
See PION-DEUTERON INTERACTIONS
PION MINUS-PROTON INTERACTIONS
Neutral and charged D/sup */ meson production in pi /sup -/p interactions at 360 Gev/c, 12:48756 (R;SU;In Russian)
Observation of a narrow meson with a mass of 1750 MeV decaying into etaeta pair, 12:48753 (R;SU;In Russian)
Angular Correlation
Angular correlations of particles produced in the π/sup -/p->K/sup 0/π/sup +-/ +X, π/sup -/p->K/sup 0/K/sup 0/-bar+X, π/sup -/p->K/sup 0/Λ+X reactions at 4.5 GeV/c momentum, 12:48815 (R;SU;In Russian)
Angular Distribution
Angular correlations of particles produced in the π/sup -/p->K/sup 0/π/sup +-/ +X, π/sup -/p->K/sup 0/K/sup 0/-bar+X, π/sup -/p->K/sup 0/Λ+X reactions at 4.5 GeV/c momentum, 12:48815 (R;SU;In Russian)
Charge-Exchange Interactions
Oscillations of polarization asymmetry in the π/sup -/parrow up -> π/sup 0/n reaction in the range of tau $\leqq$ 3(GeV/c)/sup 2/, 12:48752 (R;SU;In Russian)
Spin Orientation
Oscillations of polarization asymmetry in the π/sup -/parrow up -> π/sup 0/n reaction in the range of tau $\leqq$ 3(GeV/c)/sup 2/, 12:48752 (R;SU;In Russian)
PION NEUTRAL-DEUTERON INTERACTIONS
See PION-DEUTERON INTERACTIONS
PION PLUS-DEUTERON INTERACTIONS
See PION-DEUTERON INTERACTIONS
PION PLUS-PROTON INTERACTIONS
Search for the exotic baryon resonances with isospin I=5/2 in the π/sup +/p -> pπ/sup +/π/sup +/π/sup -/ reaction at π/sup +/ meson momentum of 3.94 GeV/c, 12:48765 (R;SU;In Russian)
Peripheral Models
Study on the baryon exchange π/sup +/ + p -> Δ/sup ++/ + rho/sup 0/ reaction at 3.94 GeV/c, 12:48762 (R;SU;In Russian)
PION REACTIONS
See also PION MINUS REACTIONS
Charge-Exchange Reactions
Pion double charge exchange and the nuclear shell model, 12:48959 (J;US)
Nuclear Potential
Off-mass-shell behaviour of πN amplitude and parameters of pion-nuclear optical potential, 12:48795 (RA;SU;In Russian)
Particle Production
(γ,p) and (π,p) reactions in the Δ (1232) resonance region, 12:48883 (J;US)
Experiments on eta-meson production, 12:48965 (J;US)
PION-DEUTERON INTERACTIONS
Dibaryon resonance 2.9 GeV in elastic backward π/sup -/d scattering, 12:48820 (R;SU)
PION-NUCLEON INTERACTIONS
Scattering Amplitudes
Off-mass-shell behaviour of πN amplitude and parameters of pion-nuclear optical potential, 12:48795 (RA;SU;In Russian)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Form Factors
Form factor πrhoγ in perturbative QCD, 12:48817 (R;SU)
Mass Formulae
Meson mass spectrum in generalized quark field model, 12:48792 (R;SU)
Particle Production
Unique algorithm for calculation of inclusive cross sections of particle production with big transverse momenta and of cumulative type hadrons, 12:48798 (RA;SU;In Russian)
PIONS MINUS
Coherent Production
Charged current antineutrino-induced coherent negative pion production off neon, 12:48760 (R;SU)
Multiple Production
Study on the multiple pion production in the nondiffraction exclusive K/sup -/p interactions at 32.1 Gev/c, 12:48754 (R;SU;In Russian)
Polarizability
Pions polarizability and H(1190) meson, 12:48796 (RA;SU;In Russian)
PIONS NEUTRAL
Electroproduction
Electroproduction of neutral pions on deuterons, 12:48824 (R;SU;In Russian)
Meson Spectroscopy
Conceptual design of a high-resolution π^0 spectrometer, 12:48261 (R;US)
Particle Production
Oscillations of polarization asymmetry in the π/sup -/parrow up -> π/sup 0/n reaction in the range of tau $\leqq$ 3(GeV/c)/sup 2/, 12:48752 (R;SU;In Russian)
Polarizability
Pions polarizability and H(1190) meson, 12:48796 (RA;SU;In Russian)
PIONS PLUS
Multiple Production
Study on the multiple pion production in the nondiffraction exclusive K/sup -/p interactions at 32.1 Gev/c, 12:48754 (R;SU;In Russian)
Polarizability
Pions polarizability and H(1190) meson, 12:48796 (RA;SU;In Russian)
PIPELINES
Inspection
Technology survey for a robot which will investigate the condition of underground pipe. Topical report, June-September 1986, 12:47176 (R;US)
PIPES
Corrosion
Prediction and mitigation of erosive-corrosive wear in secondary piping systems of nuclear power plants, 12:47438 (R;US)
Erosion
Prediction and mitigation of erosive-corrosive wear in secondary piping systems of nuclear power plants, 12:47438 (R;US)
Industrial Radiography
Evaluation of a new gamma scanning method for detection and sizing of intergranular stress corrosion cracking, 12:47375 (RA;US)
In-Service Inspection
Application of medical UT technology to the utility industry, 12:47372 (RA;US)
Continuous high-temperature surveillance instrumentation for Dresden-2 hydrogen water chemistry program, 12:47370 (RA;US)
Evaluation of a new gamma scanning method for detection and sizing of intergranular stress corrosion cracking, 12:47375 (RA;US)
Ultrasonic characterization of centrifugally cast stainless steel samples, 12:47413 (RA;US)
Ultrasonic wave scattering and characterization: centrifugally cast stainless steel, 12:47373 (RA;US)
Utility guide to advanced UT systems for PSI and ISI, 12:47371 (RA;US)

Nondestructive Testing
NDE of fossil plant steam piping, 12:47344 (RA;US)
Thermal Insulation
Effects of exposure testing on pipe insulation: FY 1986, progress report, 12:47322 (R;US)
Ultrasonic Testing
Application of medical UT technology to the utility industry, 12:47372 (RA;US)
Continuous high-temperature surveillance instrumentation for Dresden-2 hydrogen water chemistry program, 12:47370 (RA;US)
IntraSpect/2 and IntraSpect/98 enhancements and establishment of rapid field deployment status, 12:47380 (RA;US)
Piping inspection activities at the EPRI NDE center, 12:47401 (RA;US)
Ultrasonic characterization of centrifugally cast stainless steel samples, 12:47413 (RA;US)
Ultrasonic wave scattering and characterization: centrifugally cast stainless steel, 12:47373 (RA;US)
Utility guide to advanced UT systems for PSI and ISI, 12:47371 (RA;US)

PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Proton induced X-ray emission (PIXE) for the quantitative analysis of elements in thin samples, in surface layers of thick samples, and in aerosol filters, 12:47937 (R;DE;In German)

PLACENTA
Membrane Transport
Diaplacental transfer of /sup 14/C ethanol in pregnant albino rats at various stages of gestation, 12:48464 (R;DE;In German)

PLANETARY MAGNETOSPHERES
Classification
Magnetospheres of the outer planets, 12:48559 (RA;US)
Particle Production
Magnetospheres of the outer planets, 12:48559 (RA;US)

PLANETS
See also MARS PLANET
NEPTUNE PLANET
URANUS PLANET
Quantum radiophysics. Collection, 12:47805 (R;SU;In Russian)
Neutron Emission
Phase density of neutrons emitted by an atmosphereless planet, 12:48556 (RA;SU;In Russian)

PLANTS

HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
NON-EQUILIBRIUM PLASMA
RELATIVISTIC PLASMA
Quantum radiophysics. Collection, 12:47805 (R;SU;In Russian)
Absorption Spectra
Doppler splitting of electron cyclotron absorption resonance in plasmas, 12:49107 (J;US)
Advection
Rigorous upper bounds for fluid and plasma transport due to passive advection, 12:49100 (R;US)
Rigorous upper bounds for transport due to passive advection by inhomogeneous turbulence, 12:48744 (J;US)
Fluctuations
Observations of the asymmetric power spectra of the density fluctuations in JIPP T-IIU plasma by the far-infrared laser scattering, 12:49080 (R;JP)
Heat Transfer
Anomalous electron heat transport driven by low frequency electromagnetic turbulence, 12:49109 (J;US)
High-Frequency Heating
Effect of electrostatic field on behaviour of peripheric plasma at high-frequency heating, 12:49086 (R;SU;In Russian)
Images
Soft x-ray imaging system for measurement of noncircular tokamak plasmas, 12:49114 (BA;US)
Kink Instability
Observation of a new toroidally localized kink mode and its role in reverse-field—pinch plasmas, 12:49111 (J;US)
Magnetohydrodynamics
Turbulent relaxation of a confined magnetofluid to a force-free state, 12:49112 (J;GB)
Mathematical Models
Diagonal Pade approximations for initial value problems, 12:49097 (R;US)
Measuring Methods
Soft x-ray imaging system for measurement of noncircular tokamak plasmas, 12:49114 (BA;US)
Meetings
Experimental and theoretical physics. Collection, 12:49054 (R;SU;In Russian)
Nonlinear Problems
Anomalous electron heat transport driven by low frequency electromagnetic turbulence, 12:49109 (J;US)
Relaxation
Turbulent relaxation of a confined magnetofluid to a force-free state, 12:49112 (J;GB)
Turbulence
Anomalous electron heat transport driven by low frequency electromagnetic turbulence, 12:49109 (J;US)
Rigorous upper bounds for transport due to passive advection by inhomogeneous turbulence, 12:48744 (J;US)
Turbulent relaxation of a confined magnetofluid to a force-free state, 12:49112 (J;GB)
X-Ray Emission Analysis
Soft x-ray imaging system for measurement of noncircular tokamak plasmas, 12:49114 (BA;US)

PLASMA CONFINEMENT
Research Programs
Field-reversing electron and ion rings for the confinement and heating of plasmas: Annual progress report for the period September 1, 1986-August 31, 1987, 12:49059 (R;US)

PLASMA DENSITY
Fluctuations
Saturation of Kelvin-Helmholtz fluctuations in a sheared magnetic field, 12:49060 (R;US)

PLASMA DIAGNOSTICS
Cameras
Soft x-ray imaging system for measurement of noncircular tokamak plasmas, 12:49114 (BA;US)
Data Processing
Data processing with PC-9801 micro-computer for HCN laser scattering experiments, 12:49082 (R;JP;In Japanese)
Emission Computed Tomography
Method of emission and interferometric tomography of a laser plasma, 12:49072 (RA;SU;In Russian)
Meetings
Quantum radiophysics. Collection, 12:49055 (R;SU;In Russian)
Microwave Radiation
Hyperfrequency reflectometry for determination of electron density and its fluctuations on Petula-B tokamak, 12:49065 (R;FR;In French)
Optical Systems
X-ray multilayer optic development for plasma diagnostic and source enhancement, 12:49113 (BA;US)
Photography
Boxcar photography, 12:49092 (R;US)

Synchrotron Radiation
Inverse problem for incremental synchrotron radiation, 12:49099 (R;US)
Thomson Scattering
Feasibility of alpha particle measurement in a magnetically confined plasma by CO_2 laser Thomson scattering, 12:49090 (R;US)
Waveguides
Mode attenuation in overdimensioned circular waveguides for millimeter and submillimeter waves - comparison of principal modes in different types of guides, 12:49130 (R;FR;In French)
X-Ray Emission Analysis
Soft x-ray imaging system for measurement of noncircular tokamak plasmas, 12:49114 (BA;US)
X-Ray Equipment
Soft x-ray imaging system for measurement of noncircular tokamak plasmas, 12:49114 (BA;US)

PLASMA FOCUS
Neutron Emission
A macroscopic study of the neutron, gamma- and X-ray emissivity in the Frascati plasma focus, 12:49149 (J;US)
X-Ray Emission Analysis
A macroscopic study of the neutron, gamma- and X-ray emissivity in the Frascati plasma focus, 12:49149 (J;US)

PLASMA HEATING
See also HIGH-FREQUENCY HEATING
Research Programs
Field-reversing electron and ion rings for the confinement and heating of plasmas: Annual progress report for the period September 1, 1986-August 31, 1987, 12:49059 (R;US)

PLASMA INSTABILITY
Nonlinear Problems
Solitary Alfven wave envelopes and the modulational instability, 12:49093 (R;US)

PLASMA (QUARK)
See QUARK MATTER

PLASMA SCRAPE-OFF LAYER
Helical Instability
Helicity dissipation in the plasma edge, 12:49089 (R;US)

PLASMA SIMULATION
Current-Drive Heating
Cross effects on electron-cyclotron and lower-hybrid current drive in tokamak plasmas, 12:49064 (R;FR)

PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS

PLASTIC SCINTILLATION DETECTORS
Calibration
Calibration of scintillation detectors of the ANI installation, 12:48242 (RA;SU;In Russian)
Physical Radiation Effects
Radiation resistance of γ-detector modules at the labelling station of labelled neutrino complex, 12:48274 (R;SU;In Russian)

PLASTICS INDUSTRY
Hazardous Materials
Health-Hazard Evaluation report HETA 84-496-1766, Applied Plastics, Slocum, Rhode Island, 12:48336 (R;US)

PLATES
Thicker than SHEETS or FOILS.
Impact Strength
Models for penetration of thin plates, 12:48142 (R;US)

PLATING
For the process only.
Process Solutions
High-performance liquid chromatography methods for characterization of a plating bath brightener additive: Final report, 12:47934 (R;US)

PLATINUM
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Ion Microscopy
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)
Quantitative Chemical Analysis
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Surface Properties
Characterization of catalysts with metal-support effects and of the species adsorbed on their surfaces: Progress report, September 1, 1986-August 30, 1987, 12:47812 (R;US)
Field ion microscope studies of surface reconstructions, 12:47840 (R;US)

PLATINUM COMPOUNDS
See also PLATINUM SILICIDES
Binding Energy
Nonempirical self-consistent modified extended huckel calculations on heavy-metal systems. II. Electronic structure, bonding, and spectra of the binuclear $Pt_2(P_2O_5H_2)_4^{4-}$ ion, 12:47955 (RA;US)
Electronic Structure
Nonempirical self-consistent modified extended huckel calculations on heavy-metal systems. II. Electronic structure, bonding, and spectra of the binuclear $Pt_2(P_2O_5H_2)_4^{4-}$ ion, 12:47955 (RA;US)
Molecular Structure
Nonempirical self-consistent modified extended huckel calculations on heavy-metal systems. II. Electronic structure, bonding, and spectra of the binuclear $Pt_2(P_2O_5H_2)_4^{4-}$ ion, 12:47955 (RA;US)

PLATINUM SILICIDES
Lattice Parameters
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
Magnetic Susceptibility
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)
Magnetoresistance
Evolution of heavy-fermion behavior from mixed-valence state in the series Ce(Pt/sub 1-//sub x/Ni/sub x/)Si, 12:47922 (J;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLOWS (COAL)
See COAL PLOWS

PLT DEVICES
Lower Hybrid Heating
Electron heating using lower hybrid waves in the PLT tokamak, 12:49098 (R;US)

PLUMES
Air Pollution Monitoring
Chemical, aerosol, and optical measurements in the plumes of three midwestern coal-fired power plants, 12:47360 (R;US)

PLUTONIUM
Aerosol Monitoring
Plutonium aerosol size distributions in a reprocessing plant and during decommissioning operations, 12:48387 (RA;US)
Chemistry
Mound activities in chemical and physical research: January-June 1987, 12:47991 (R;US)
Occupational Exposure
Design and assessment of a personal monitor to optimize the occupational monitoring in plutonium laboratories, 12:48388 (RA;US)
Particle Size
Plutonium aerosol size distributions in a reprocessing plant and during decommissioning operations, 12:48387 (RA;US)
Radiation Monitoring
Design and assessment of a personal monitor to optimize the occupational monitoring in plutonium laboratories, 12:48388 (RA;US)
Radioecological Concentration
Personal air sampling at an experimental fuel fabrication line, 12:48396 (RA;US)
Solvent Extraction
Actinide recovery process, 12:47945 (P;US)

PLUTONIUM 239
After-Heat
Review of new integral determinations of decay heat, 12:47466 (R;US)

Nondestructive Analysis
Application of prediction of equilibrium to servo-controlled calorimetry measurements, 12:47247 (R;US)

PLUTONIUM 241
After-Heat
Review of new integral determinations of decay heat, 12:47466 (R;US)

PLUTONIUM CARBONATES
Complexes
The carbonate complexation of plutonium(IV), 12:47211 (R;US)

PLUTONIUM COMPOUNDS
See also PLUTONIUM CARBONATES
Physical Radiation Effects
Modeling of irradiation-induced amorphization in a titanate ceramic ($(CaPuTi_2O_7)$), 12:47901 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

POINT MUTATIONS
See GENE MUTATIONS

POISEUILLE FLOW
See LAMINAR FLOW

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLAR CUSP
Ionosphere
Electrodynamics of the polar cusp ionosphere. A case study, 12:48694 (R;NO)

POLARIMETERS
Design
Feasibility study of an infrared interferometer/polarimeter system for CIT [Compact Ignition Tokamak], 12:49057 (R;US)

POLARIZED BEAMS
Acceleration
Preliminary lattice proposal for polarized beam acceleration in SSC, 12:48215 (J;US)
Electron Cooling
Spin depolarization of a polarized antiproton beam by electron cooling, 12:48216 (J;US)

POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Combustion
Investigation concerning organic micro-pollutants from waste combustion, 12:47705 (R;SE;In Swedish)
Photochemical Reactions
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Removal
A study of micellar-enhanced ultrafiltration: Final technical report, March 1, 1984-February 28, 1987, 12:48424 (R;US)

POLLUTION ABATEMENT
Use this term for itmes that involve the prevention of pollutants at the source.
See also AIR POLLUTION ABATEMENT
Economic Impact
From pollution to prevention: a progress report on waste reduction. Special report, 12:47584 (R;US)

POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
See also AIR POLLUTION CONTROL
LAND POLLUTION CONTROL
WATER POLLUTION CONTROL
Remedial Action
ROD (Record of Decision) annual report, FY 1986, 12:48417 (R;US)

POLLUTION CONTROL EQUIPMENT
See also AIR FILTERS
SCRUBBERS
Financial Incentives
Economic incentives for the reduction of sulfur dioxide emissions, 12:47064 (J;US)

POLONIUM 218
Chemical Properties
The atmospheric chemistry of Po-218: Technical report for the period March 1, 1987 to August 31, 1987, 12:48380 (R;US)
Physical Properties
The atmospheric chemistry of Po-218: Technical report for the period March 1, 1987 to August 31, 1987, 12:48380 (R;US)

POLYACRYLONITRILE
See ORGANIC POLYMERS

POLYAMIDES
Elasticity
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)
Formation Heat
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)

POLYATOMIC MOLECULES
Rotational States
Systematic studies of molecular vibrational anharmonicity and vibration-rotation interaction by self-consistent-field higher derivative methods: Applications to asymmetric and symmetric top and linear polyatomic molecules, 12:48720 (R;US)
Vibrational States
Systematic studies of molecular vibrational anharmonicity and vibration-rotation interaction by self-consistent-field higher derivative methods: Applications to asymmetric and symmetric top and linear polyatomic molecules, 12:48720 (R;US)

POLYCYCLIC AROMATIC HYDROCARBONS
Chemical Analysis
Polycyclic aromatic hydrocarbon dermal tumorigens, 12:47044 (J;GB)
Electrochemistry
The photophysics and chemistry of PAH [polycyclic aromatic hydrocarbons] compounds: Research progress report, September 1, 1985 to August 31, 1987, 12:48317 (R;US)
Photochemistry
The photophysics and chemistry of PAH [polycyclic aromatic hydrocarbons] compounds: Research progress report, September 1, 1985 to August 31, 1987, 12:48317 (R;US)
Quantitative Chemical Analysis
Negative ion processes for the unambiguous identification of polycyclic aromatic compounds, 12:47047 (J;GB)
Toxicity
The photophysics and chemistry of PAH [polycyclic aromatic hydrocarbons] compounds: Research progress report, September 1, 1985 to August 31, 1987, 12:48317 (R;US)

POLYETHERS
See POLYETHYLENE GLYCOLS

POLYETHYLENE GLYCOLS
Elasticity
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)
Formation Heat
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)
Liquid Column Chromatography
High-performance liquid chromatography methods for characterization of a plating bath brightener additive: Final report, 12:47934 (R;US)

POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS

POLYETHYLENES
Elasticity
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)
Formation Heat
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)

POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS

POLYMER FLOODING
See WATERFLOODING

POLYMERS
See also ORGANIC POLYMERS

Electro-Optical Effects
Photoreflectance of reduced poly 3-methyl thiophene, 12:47914 (J;US)
Fabrication
Applications of polymer characterization, 12:47908 (RA;US)
Optical Reflection
Photoreflectance of reduced poly 3-methyl thiophene, 12:47914 (J;US)
Physical Properties
Applications of polymer characterization, 12:47908 (RA;US)
Polarons
Photoreflectance of reduced poly 3-methyl thiophene, 12:47914 (J;US)
Valence
Photoreflectance of reduced poly 3-methyl thiophene, 12:47914 (J;US)

POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS

POLYPROPYLENE
Elasticity
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)
Formation Heat
Calculation of polymer elastic moduli using semiempirical methods, 12:47973 (RA;US)

POLYSTYRENE
Coatings
Fabrication of polyvinyl alcohol coated polystyrene shells, 12:49144 (J;US)
Phosphorescence
Migration and transfer of triplet energy in selected polymer systems, 12:47891 (R;US)

POLYTETRAOXANE
See ORGANIC POLYMERS

POLYTHENE
See POLYETHYLENES

POLYTHIONATES

POLYVINYLS

POLYVINYLS
See also POLYSTYRENE
Surface Coating
Fabrication of polyvinyl alcohol coated polystyrene shells, 12:49144 (J;US)

PONDS
See also SETTLING PONDS
Remedial Action
Superfund Record of Decision (EPA Region 2): Florence Land Recontouring (FLR) landfill, Florence, Mansfield, and Springfield, New Jersey, June 1986. Final report, 12:48412 (R;US)
Water Pollution
Superfund Record of Decision (EPA Region 4) Gallaway Ponds Site, Gallaway, Tennessee, September 1986. Final report, 12:48448 (R;US)

POOL CRITICAL ASSEMBLY ORNL
See ORNL-PCA REACTOR

POOLS
See PONDS

POPULATION DENSITY
Geographical Variations
Illustrations of a density-equalizing map projection technique, 12:48491 (R;US)
Mathematical Models
Illustrations of a density-equalizing map projection technique, 12:48491 (R;US)
Regional Analysis
Illustrations of a density-equalizing map projection technique, 12:48491 (R;US)

POPULATION DYNAMICS
Research Programs
Compensatory mechanisms in fish populations: An EPRI research plan: Final report, 12:48441 (R;US)
Cooling ponds and small rivers in north central United States, 12:47447 (RA;US)
Potential environmental issues for the application of research on compensatory mechanisms of fishes - the EPRI perspective, 12:47292 (RA;US)

PORE STRUCTURE
See MICROSTRUCTURE

POROUS MATERIALS
Permeability
Estimates of fluid permeability from digital image analysis of porous media, 12:48536 (RA;US)

PORPHYRINS
See also HEMOGLOBIN
Absorption Spectra
Orientation and linear dichroism characteristics of porphyrin-DNA complexes, 12:48453 (J;US)
Catalytic Effects
Chemically modified electrodes and related solution chemistry: Technical progress report for the period 1/15/87 to 9/10/87, 12:47890 (R;US)
Chemical Composition
Tandem mass spectrometric analyses of geoporphyrins isolated from oil shale kerogen, 12:47186 (BA;US)
Chemical Properties
Tandem mass spectrometric analyses of geoporphyrins isolated from oil shale kerogen, 12:47186 (BA;US)
Chemical Reactions
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Dichroism
Orientation and linear dichroism characteristics of porphyrin-DNA complexes, 12:48453 (J;US)
Radiolysis
Reactions of iron porphyrins with CF_3, CF_3O_2, and CBr_3O_2 radicals, 12:48004 (J;US)
Structural Chemical Analysis
Geoporphyrin structure determination using MS/MS, 12:48016 (BA;US)

PORTSMOUTH GASEOUS DIFFUSION PLANT
Compressors
Fairchild 7B compressor model, 12:47195 (R;US)

PORTSMOUTH PLANT
See PORTSMOUTH GASEOUS DIFFUSION PLANT

POSITION INDICATORS
See DISPLACEMENT GAGES

POSITRON BEAMS
Meetings
Proceedings of the ICFA [International Committee for Future Accelerators] workshop on low emittance e^- -e^+ beams, 12:48180 (R;US)

POSITRON COLLISIONS
Elastic Scattering
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)

POSITRONIUM
Electron Capture
Electron capture from solids by positrons, 12:49000 (R;US)
Production
Evaluation of cross section for electron capture by positrons, 12:48729 (J;US)

POSTULATED PARTICLES
See also GLUONS
HEAVY LEPTONS
HIGGS BOSONS
MAGNETIC MONOPOLES
QUARKS
Rest Mass
Gaugino masses in superstring inspired models, 12:48843 (BA;US)
Supersymmetry
Gaugino masses in superstring inspired models, 12:48843 (BA;US)

POTABLE WATER
See DRINKING WATER
POTASSIUM
Electronic Structure
Generalized Kohn-Sham theory for low-energy electron scattering by atoms including relativistic effects, 12:47959 (RA;US)
POTASSIUM HYDROXIDES
Catalytic Effects
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
POULTRY
See FOWL
POWDER RIVER BASIN
Petroleum Deposits
Relation of sedimentologic features and reservoir quality in a shelf ridge sandstone deposit - comparison of outcrop and subsurface properties, 12:47129 (J;US)
POWDERS
Morphology
Geometric powder characterization, 12:47907 (RA;US)
Particle Size
Geometric powder characterization, 12:47907 (RA;US)
Laser diffraction particle size analysis of powders, 12:48280 (R;US)
POWER BURST FACILITY USAEC
See PBF REACTOR
POWER DEMAND
Peak Load
Peak-power cost-reduction guidebook. Final report, May 1983-December 1985 (At US Air Force bases), 12:47601 (R;US)
POWER GENERATION
See also COGENERATION
Economic Analysis
Competitiveness of domestic fuels in the year 1986, 12:47105 (R;FI;In Finnish)
Rankine Cycle
Application of Organic Rankine Cycles (ORCs) to decentralized power generation. Preliminary study, 12:48165 (R;FI;In Finnish)
POWER METERS
Accuracy
Power ratio/attenuation dc substitution measurement uncertainty with a modified Hewlett Packard 432A Power Meter and 478A thermistor mount, 12:48277 (R;US)
Fabrication
Quad RF power meter, 12:48276 (R;US)
Modifications
Quad RF power meter, 12:48276 (R;US)
POWER PLANTS

PROTON BEAMS
Beam Monitoring
Diagnostic apparatus for scraper system of 70 GeV proton synchrotron, 12:48203 (R;SU;In Russian)
Proton beam current measurement in the U-10 ionguide, 12:48207 (R;SU;In Russian)
Beam Monitors
Measuring characteristics of longitudinal high-frequency beam instability in the IHEP proton synchrotron, 12:48184 (R;SU;In Russian)
Instability
Measuring characteristics of longitudinal high-frequency beam instability in the IHEP proton synchrotron, 12:48184 (R;SU;In Russian)
Stability
Longitudinal stability of a drift bunch, 12:48185 (R;SU;In Russian)
PROTON REACTIONS
Capture
Radiative capture of protons by medium nuclei and γ-ray strength functions, 12:48937 (RA;SU)
Charge-Exchange Reactions
Isovector couplings for nucleon charge-exchange reactions at intermediate energies, 12:48882 (J;US)
Spin excitations in nuclei, 12:48936 (RA;SU;In Russian)
Coherent Tube Model
A-dependence of conversed particles in high energy hadron-nucleus interactions, 12:48814 (R;SU;In Russian)
Inelastic Scattering
Charge form factors and quark clusters, 12:48837 (J;US)
Nuclear Models
Model dependence of pp → npπ^+ spin observables, 12:48968 (J;US)
Nuclear Reaction Kinetics
Deuteron production and space-time characteristics of high-energy hadron-nucleus reactions, 12:48922 (R;SU)
Nuclear Reaction Yield
Momentum spectra of pions and protons in p, /sup 12/C and /sup 22/Ne collisions with emulsion nuclei at 4.5 GeV/c, 12:48869 (RA;SU;In Russian)
Particle Production
Experiments on eta-meson production, 12:48965 (J;US)
Total Cross Sections
Application of the eikonal expansion method for description of intermediate energy hadron-nucleus interaction, 12:48908 (RA;SU;In Russian)
PROTON-ANTIPROTON INTERACTIONS
Computerized Simulation
Relativisitic hydrodynamics and heavy ion reactions, 12:48951 (R;US)
Coulomb Scattering
Elastic pp scattering in the Coulomb-nuclear interference region and low energy behaviour of p-barp scattering partial amplitudes, 12:48821 (R;SU)
Glueballs
Experimental search of gluonic mesons, 12:48826 (R;FR;In French)
Jet Model
Recent results on jet-physics and QCD tests by UA1 and UA2 at the CERN proton-antiproton collider, 12:48767 (R;FR)
Scattering Amplitudes
Elastic pp scattering in the Coulomb-nuclear interference region and low energy behaviour of p-barp scattering partial amplitudes, 12:48821 (R;SU)
Total Cross Sections
Description of the total cross sections rise in the gluon dominance model, 12:48782 (R;SU)
PROTON-INDUCED X-RAY EMISSION ANALYSIS
See PIXE ANALYSIS
PROTONIUM
Elastic pp scattering in the Coulomb-nuclear interference region and low energy behaviour of p-barp scattering partial amplitudes, 12:48821 (R;SU)
PROTON-NEUTRON INTERACTIONS
Nuclear dynamics of bound eta mesons: Eta-mesic nuclei and mesic compound-nucleus resonances, 12:48950 (R;US)
Elastic Scattering
Unitary three-body calculation of nucleon-nucleon scattering. Improved model for πN P/sub 33/ interaction, 12:48885 (R;JP)
N*Resonances
Unitary three-body calculation of nucleon-nucleon scattering. Improved model for πN P/sub 33/ interaction, 12:48885 (R;JP)
PROTON-PROTON INTERACTIONS
Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers, 12:48755 (R;SU;In Russian)
Coulomb Scattering
Elastic pp scattering in the Coulomb-nuclear interference region and low energy behaviour of p-barp scattering partial amplitudes, 12:48821 (R;SU)
Elastic Scattering
Unitary three-body calculation of nucleon-nucleon scattering. Improved model for πN P/sub 33/ interaction, 12:48885 (R;JP)
N*Resonances
Unitary three-body calculation of nucleon-nucleon scattering. Improved model for πN P/sub 33/ interaction, 12:48885 (R;JP)
Pair Production
Gluon production of gauge bosons, 12:48776 (R;US)
Total Cross Sections
Description of the total cross sections rise in the gluon dominance model, 12:48782 (R;SU)
PROTONS
See also COSMIC PROTONS
Emission Spectra
Lateral ejection of low energy protons in high energy heavy-ion collisions, 12:48916 (R;JP)
Form Factors
Experimental studies of electromagnetic properties of few body systems, 12:48770 (R;US)
Particle Production
A-dependence of conversed particles in high energy hadron-nucleus interactions, 12:48814 (R;SU;In Russian)
Correlations of cumulative hadrons in hadron-nuclear interactions, 12:48761 (R;SU;In Russian)
Production of cumulative protons with 0.6-1.83 GeV/c momenta, 12:48764 (R;SU;In Russian)
Unique algorithm for calculation of inclusive cross sections of particle production with big transverse momenta and of cumulative type hadrons, 12:48798 (RA;SU;In Russian)
PSEUDOSCALAR MESONS
See also B MESONS
D MESONS
ETA MESONS
F MESONS
KAONS
PIONS

Configuration Mixing
Mixing of radial excitations of pseudoscalar isosinglets and possible nature of eta(1275) and iota(1440), 12:48804 (RA;SU;In Russian)
Excited States
Mixing of radial excitations of pseudoscalar isosinglets and possible nature of eta(1275) and iota(1440), 12:48804 (RA;SU;In Russian)
PSI-3105 RESONANCES
Hadronic Particle Decay
J/psi and Y radiative and hadronic decays, 12:48830 (R;US)
Radiative Decay
Experimental search of gluonic mesons, 12:48826 (R;FR;In French)
J/psi and Y radiative and hadronic decays, 12:48830 (R;US)
On properties of the third pseudoscalar isosinglet, 12:48794 (RA;SU;In Russian)
PUBLIC LANDS
Sales
The federal Outer Continental Shelf leasing program in northern California, 12:47135 (R;US)
PUBLIC UTILITY REGULATORY POLICIES ACT
Implementation
Cogeneration trends and prospects: implications for utilities, 12:47678 (RA;US)
PURPA implementation: federal regulations and their impact on electric utilities, 12:47675 (RA;US)
PUERTO RICO
Air Pollution
Atmospheric aerosol chemical sampling, 12:48327 (RA;US)
PULMONARY LAVAGE
See LUNGS
PULSARS
Stellar Magnetospheres
Photon dispersion in a magnetic field with account for positronium production, 12:48555 (RA;SU;In Russian)
PULSE AMPLIFIERS
Stability
Stable current amplifying cascade, 12:48264 (R;SU;In Russian)
PULSE CIRCUITS
Microwave and pulsed power engineering, 12:48152 (RA;US)
Design
Diagnostics and microelectronics engineering, 12:48149 (RA;US)
PULSE COMBUSTORS
Combustion Kinetics
Chemical kinetic analysis of pulse combustors, 12:47179 (BA;US)
The effect of fuel burn rate on pulse combustor tail pipe velocities, 12:48161 (BA;US)
Exhaust Systems
The effect of fuel burn rate on pulse combustor tail pipe velocities, 12:48161 (BA;US)
Fuel-Air Ratio
The effect of fuel burn rate on pulse combustor tail pipe velocities, 12:48161 (BA;US)
PULVERIZED FUEL ASH
See FLY ASH
PUMPS
See also VACUUM PUMPS
Stirling Engines
Stirling engines and irrigation pumping, 12:48166 (R;US)
PURPA
See PUBLIC UTILITY REGULATORY POLICIES ACT
PUTRESCINE
Labelling
Improved synthesis of [1-^{11}C]putrescine, 12:48087 (J;GB)
PWR TYPE REACTORS

THREE MILE ISLAND-2 REACTOR
WWER TYPE REACTORS
Aerosols
Models for aerosol rate processes in nuclear reactor source term studies, 12:47512 (RA;US)
Boilers
Infrared for nondestructive boiler tube inspection, 12:47384 (RA;US)
Ultrasonic boiler inspection and economic analysis guidelines, 12:47385 (RA;US)
Chemical Analysis
Proceedings of the symposium on chemical phenomena associated with radioactivity releases during severe nuclear plant accidents, 12:47483 (R;US)
Containment
Comparison of European computer codes relative to the aerosol behavior in PWR containment buildings during severe core damage accidents, 12:47446 (R;FR)
Containment Spray Systems
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:47521 (RA;US)
Core Catchers
Investigation of the design and thermal behaviour of a core catching device for a light water reactor, 12:47473 (R;DE;In German)
Fission Product Release
Assessment of effect of dissolved species on stable droplet sizes in PWR containments post fault, 12:47523 (RA;US)
Fission product release from core-concrete melts, 12:47529 (RA;US)
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Fission Products
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part I, 12:47491 (RA;US)
Experimental study of radiolytic effect on dilute aqueous iodide solution, 12:47525 (RA;US)
Fission product release from core-concrete melts, 12:47529 (RA;US)
Importance of environment on high temperature reactor accident chemistry, 12:47494 (RA;US)
Fuel Elements
Fuel performance annual report, 12:47541 (J;US)
Properties of materials for water reactor fuel elements and methods of measurement: Proceedings of a technical committee meeting, 12:47406 (R;AT)
Fuel-Coolant Interactions
Hydrogen generation during fuel-coolant interactions, 12:47528 (RA;US)
Ice Condensers
Capture of iodine in pressurized water reactor ice condensers, 12:47522 (RA;US)
In Pile Loops
Detection of stress corrosion cracks in reactor pressure vessel and primary coolant system anchor studs, 12:47382 (RA;US)
Loss of Coolant
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part II, 12:47492 (RA;US)
Ex-plant consequence analysis: models, typical results, uncertainties, chemistry, 12:47485 (RA;US)
Review of new integral determinations of decay heat, 12:47466 (R;US)
Severe accident behavior, 12:47484 (RA;US)
Meltdown
Capture of iodine in pressurized water reactor ice condensers, 12:47522 (RA;US)
Corrosion and deposition studies of stainless steel exposed to aerosols containing Te, Cs, I, Sn, Mn, Ag and B_2O_3 at 300 to 1000°C in a reducing ($H_2/H_2O/N_2$) environment, 12:47498 (RA;US)
Iodine chemical reactions considered in German PWR core-melt accident risk evaluation, 12:47517 (RA;US)

Nondestructive Testing
EPRI Nondestructive Evaluation Center: 1986 annual report, 12:47470 (R;US)
Pipes
Application of medical UT technology to the utility industry, 12:47372 (RA;US)
IntraSpect/2 and IntraSpect/98 enhancements and establishment of rapid field deployment status, 12:47380 (RA;US)
Ultrasonic characterization of centrifugally cast stainless steel samples, 12:47413 (RA;US)
Ultrasonic wave scattering and characterization: centrifugally cast stainless steel, 12:47373 (RA;US)
Pressure Vessels
Detection of stress corrosion cracks in reactor pressure vessel and primary coolant system anchor studs, 12:47382 (RA;US)
Primary Coolant Circuits
Leak-detection technology for reactor primary systems, 12:47539 (J;US)
Quenching
Assessment of interfacial shear and wall heat transfer of RELAP5/MOD2/36.02 during reflooding, 12:47411 (R;CH)
Radioactive Aerosols
Comparison of European computer codes relative to the aerosol behavior in PWR containment buildings during severe core damage accidents, 12:47446 (R;FR)
Radioactive Effluents
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Reactor Accidents
Assessment of effect of dissolved species on stable droplet sizes in PWR containments post fault, 12:47523 (RA;US)
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part I, 12:47491 (RA;US)
Chemical forms of fission product tellurium in a severe reactor accident, 12:47499 (RA;US)
CONTAIN code calculations of the effects on the source term of CsI to I_2 conversion due to severe hydrogen burns, 12:47521 (RA;US)
CSNI source term task force review, 12:47531 (RA;US)
Fission product deposition behavior, 12:47508 (RA;US)
Hydrogen generation during fuel-coolant interactions, 12:47528 (RA;US)
Importance of environment on high temperature reactor accident chemistry, 12:47494 (RA;US)
Influence of chemical form on cesium revaporization from the reactor coolant system, 12:47497 (RA;US)
Integrated analysis of fission product transport in reactor coolant systems, 12:47495 (RA;US)
Interaction of caesium iodide with boric acid under severe reactor accident conditions, 12:47519 (RA;US)
Iodine behavior in containment under LWR accident conditions, 12:47518 (RA;US)
Modeling the chemical behavior of radionuclides in severe nuclear accidents, 12:47509 (RA;US)
Models for aerosol rate processes in nuclear reactor source term studies, 12:47512 (RA;US)
Proceedings of the symposium on chemical phenomena associated with radioactivity releases during severe nuclear plant accidents, 12:47483 (R;US)
Radionuclide release and aerosol generation during core debris interactions with concrete, 12:47527 (RA;US)
Reactor coolant system and containment aqueous chemistry, 12:47493 (RA;US)
Real time mass spectrometric evaluation of fission product transport at temperature and pressure, 12:47488 (RA;US)
Regulatory simplification of fission product chemistry, 12:47511 (RA;US)
Relative importance of individual elements to LWR accident consequence estimates assuming equal release fractions, 12:47549 (J;US)
Role of chemistry in nuclear accidents, 12:47487 (RA;US)
Status of chemical research and the analysis of severe reactor accidents, 12:47532 (RA;US)
The chemistry of nuclear reactor accidents: problems and progress, 12:47486 (RA;US)
The chemistry of fission product iodine under nuclear reactor accident conditions, 12:47516 (RA;US)
Reactor Components
Advanced nondestructive evaluation for creep damage, 12:47394 (RA;US)
Array coil probe design optimization, 12:47392 (RA;US)
Development and validation of a real-time SAFT-UT [synthetic aperture focusing technique for ultrasonic testing] system for the inspection of light water reactor components: Annual report, October 1985-September 1986, 12:47408 (R;US)
Development of a finite element model for ultrasonic NDT phenomena, 12:47414 (RA;US)
Experimental verification of mathematical models for ultrasonic NDT of intergranular stress corrosion cracks, 12:47379 (RA;US)
Heavy section inspection activities at the EPRI NDE center, 12:47402 (RA;US)
Introduction and summary, 12:47412 (RA;US)
Modeling ultrasonic inspection of nuclear components: beam models and applications, 12:47374 (RA;US)
NDE training activities at the EPRI NDE center, 12:47404 (RA;US)
New signal processing methods for the evaluation of eddy current NDT data, 12:47390 (RA;US)
Reactor Cooling Systems
Integrated analysis of fission product transport in reactor coolant systems, 12:47495 (RA;US)
PWR [pressurized water reactor] pressurizer transient response: Final report, 12:47469 (R;US)
Reactor coolant system and containment aqueous chemistry, 12:47493 (RA;US)
Reactor Safety
Fuel performance annual report, 12:47541 (J;US)
Leak-detection technology for reactor primary systems, 12:47539 (J;US)
Proceedings of the symposium on chemical phenomena associated with radioactivity releases during severe nuclear plant accidents, 12:47483 (R;US)
PWR [pressurized water reactor] pressurizer transient response: Final report, 12:47469 (R;US)
Severe accident behavior, 12:47484 (RA;US)
Source Terms
CSNI source term task force review, 12:47531 (RA;US)
Interaction of caesium iodide with boric acid under severe reactor accident conditions, 12:47519 (RA;US)
Spent Fuels
Interim results from UO_2 fuel oxidation tests in air, 12:47201 (R;US)
Steam Generators
Advanced ultrasonic techniques for steam generator tube in-service inspection, 12:47391 (RA;US)
Automation of eddy current system for in-service inspection of turbine and generator rotor bores, 12:47397 (RA;US)
EMAT sleeve-end inspection system, 12:47393 (RA;US)
Flexible eddy current coil arrays, 12:47396 (RA;US)
Nondestructive evaluation of generator retaining rings, 12:47400 (RA;US)
Photothermal radiometric imaging for NDE, 12:47395 (RA;US)
PWR steam generator tubing sample library, 12:47415 (RA;US)
Residual and applied stress analysis of an alloy 600 row 1 U-bend: Final report, 12:47416 (R;US)
Signal processing development for steam generator tube inspection, 12:47388 (RA;US)
Steam generator inspection activities at the EPRI NDE center, 12:47405 (RA;US)
Ultrasonic inspection of a steam generator upper shell-to-cone weld using automated inspection and data processing equipment, 12:47383 (RA;US)
Verification of EPRI two-dimensional finite element computer code for eddy-current testing, 12:47389 (RA;US)
Steam Turbines
Improvements to the safer rotor life prediction code, 12:47399 (RA;US)
Remote inspection of steam turbine blades, 12:47398 (RA;US)

Turbine inspection activities at the EPRI NDE center, 12:47403 (RA;US)
Tubes
Ferromagnetic material inspection for feedwater heater and condenser tubes, 12:47386 (RA;US)
Preliminary technical assessment of an inflatable inspection probe - phase II, 12:47387 (RA;US)
PWR steam generator tubing sample library, 12:47415 (RA;US)
Turbine Blades
Flexible eddy current coil arrays, 12:47396 (RA;US)
Ultrasonic Testing
Feature-enhanced imaging, 12:47378 (RA;US)
Valves
Operating reliability of valves in French pressurized water nuclear power plants, 12:47410 (R;FR)
Welded Joints
PC imaging system for reactor NDE, 12:47381 (RA;US)

PYROTECHNIC DEVICES
Ignition
Measurement of pyrotechnic ignition energy by thermography, 12:48300 (BA;US)
Laser Radiation
Measurement of pyrotechnic ignition energy by thermography, 12:48300 (BA;US)

PYRUVIC ACID
Photolysis
IR diode laser study of vibrational energy distribution in CO_2 produced by UV excimer laser photofragmentation of pyruvic acid, 12:48026 (J;US)

Q

QUADRUPOLE LINACS
Beam Dynamics
Scheme to funnel ion beams with a radio-frequency quadrupole, 12:48221 (J;US)
Beam Monitoring
Noninterceptive beam diagnostics, 12:48217 (J;US)
Design
CW RFQ development, 12:48218 (J;US)
Ion Beam Injection
Noninterceptive beam diagnostics, 12:48217 (J;US)
Operation
CW RFQ development, 12:48218 (J;US)
Research Programs
CW RFQ development, 12:48218 (J;US)

QUANTIZATION
Inequivalent quantizations and fundamentally perfect spaces, 12:48844 (R;US)

QUANTUM CHROMODYNAMICS
Chiral Symmetry
Model for dynamical chiral symmetry breaking and quark condensate, 12:48787 (R;SU)
Phase Transformations
Model of a chiral phase transition in QCD/sub 4/, 12:48801 (RA;SU;In Russian)
Properties of the scalar σ meson at finite density, 12:48862 (J;US)
Renormalization group approach to QCD phase transitions, 12:48849 (R;JP)
Research Programs
Theoretical studies of phenomenological models of nuclear chromodynamics: Progress report, January 1, 1987-December 31, 1987, 12:48779 (R;US)
Supersymmetry
Symmetry breakings in supersymmetric quantum chromodynamics with N/sub color/ < N/sub flavor/, 12:48840 (R;JP)
Symmetry Breaking
Symmetry breakings in supersymmetric quantum chromodynamics with N/sub color/ < N/sub flavor/, 12:48840 (R;JP)

QUANTUM ELECTRODYNAMICS
Status of QED [Quantum Electrodynamics] in atomic physics, 12:48702 (RA;US)
Invariance Principles
Fixed point structure of quenched, planar quantum electrodynamics, 12:48864 (BA;US)
Symmetry Breaking
Fixed point structure of quenched, planar quantum electrodynamics, 12:48864 (BA;US)

QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
Space-Time
Quantum theory of string in the four-dimensional space-time, 12:49031 (R;SU)
String Models
Quantum theory of string in the four-dimensional space-time, 12:49031 (R;SU)
Topology
Θ-dependent energy of a particle on a circle, 12:48859 (R;NO)

QUANTUM MECHANICS
Langevin Equation
Second-quantized molecular time scale generalized Langevin equation theory and the quantum oscillator, 12:49044 (J;US)
Many-Body Problem
Second-quantized molecular time scale generalized Langevin equation theory and the quantum oscillator, 12:49044 (J;US)
Two-Body Problem
Lewis structures and Feynman diagrams: the treatment of geminal correlation in Fock space, 12:49016 (RA;US)

QUARK CONFINEMENT
See BAG MODEL

QUARK MATERIAL
See QUARK MATTER

QUARK MATTER
Nuclear stopping and energy deposition into the central rapidity region, 12:48955 (R;US)

QUARK MODEL
See also BAG MODEL
COLOR MODEL
FLAVOR MODEL
STRING MODELS
Mass Formulae
Meson mass spectrum in generalized quark field model, 12:48792 (R;SU)

QUARK PLASMA
See QUARK MATTER

QUARK SEA
See QUARK MATTER

QUARK-ANTIQUARK INTERACTIONS
Potentials
The heavy q anti q potential, 12:48855 (RA;US)
Quasipotential Equation
Modelling of spin-dependent quark-antiquark bound states in quasipotential approach, 12:48852 (R;SU;In Russian)

QUARK-GLUON PLASMA
See QUARK MATTER

QUARKONIUM
A hypothetical bound state of quark and antiquark.
Regge Trajectories
Gluonium and Regge trajectories from the Klein-Gordon equation, 12:48797 (RA;SU;In Russian)

QUARKS
Confinement
Better potential for quarks, 12:48836 (J;US)
Excited States
Excited quark production at hadron colliders, 12:48827 (R;US)
Particle Decay
Possibility to test the excited quark hypothesis and define the quark quantum numbers, 12:48783 (R;SU)
Particle Production
E_6 exotic quark production in ep collisions, 12:48777 (R;US)
Possibility to test the excited quark hypothesis and define the quark quantum numbers, 12:48783 (R;SU)

QUASARS
Infrared Spectra
Far-infrared properties of optically-selected quasars and Seyfert galaxies, 12:48677 (RA;US)
QUASIPARTICLE-PHONON MODEL
Quasiparticle-phonon nuclear model, 12:48924 (RA;SU;In Russian)
QUENCHING
Heat Transfer
Assessment of interfacial shear and wall heat transfer of RELAP5/MOD2/36.02 during reflooding, 12:47411 (R;CH)
Hydraulics
Assessment of interfacial shear and wall heat transfer of RELAP5/MOD2/36.02 during reflooding, 12:47411 (R;CH)
QUERCUS
See OAKS

R

RACETRACK MICROTRONS
Focusing
Long-range focusing, 12:48187 (RA;SU;In Russian)
RADIATION BURDEN
See RADIATION DOSES
RADIATION CHEMISTRY
Radiation technologies in the Nuclear Research Institute, 12:48030 (RA;CS)
RADIATION DECONTAMINATION
See DECONTAMINATION
RADIATION DETECTION
Accuracy
Detection capabilities and accuracy requirements of concentrations of radioactive material in air for radiation protection purposes, 12:48385 (RA;US)
RADIATION DETECTORS

RADIATION MONITORING
South African Association of Physicists in Medicine and Biology: 25. Anniversary Congress, 18-22 March 1985, Cape Town, 12:48470 (R;ZA;In Afrikaans and English)
Personnel Monitoring
Health-Hazard Evaluation Report HETA 85-111-1770, Feed Materials Production Center, Fernald, Ohio, 12:47193 (R;US)
Quality Control
Quality control measurements of airborne radionuclides from nuclear power plants in the Federal Republic of Germany, 12:47548 (J;US)
Research Programs
Personal air sampling at an experimental fuel fabrication line, 12:48396 (RA;US)
RADIATION MONITORS
See also NEUTRON MONITORS
Calibration
Necessity for multiple energy photon calibrations of radiation monitors, 12:48240 (RA;ZA)
Design
Design and assessment of a personal monitor to optimize the occupational monitoring in plutonium laboratories, 12:48388 (RA;US)
Efficiency
Measurement of particle losses in nuclear reactor airborne radiation monitors, 12:47451 (RA;US)
RADIATION PROTECTION
AFFRI (Armed Forces Radiobiology Research Institute) reports, January, February, March 1987. Technical report, 12:48494 (R;US)
RADIATION SAFETY
See RADIATION PROTECTION
RADIATION SOURCES
For cosmic sources of radiation see also COSMIC GAMMA SOURCES, COSMIC RADIO SOURCES, and COSMIC X-RAY SOURCES.
See also GAMMA SOURCES
Elliptical Configuration
Calculation of solids angles for the elliptical source-rectangular detector system, 12:48265 (R;SU;In Russian)
Radiation Dose Distributions
Determination of the temperature and absorbed dose rates at a model body with radiation sources of high activity, 12:48989 (RA;DD;In German)
Temperature Dependence
Determination of the temperature and absorbed dose rates at a model body with radiation sources of high activity, 12:48989 (RA;DD;In German)
RADIATORS
Limited to heat radiators.
Design
Estimating payload internal temperatures and radiator size for multimegawatt space platforms, 12:49155 (R;US)
RADIOACTIVE AEROSOLS
Computer Codes
Comparison of European computer codes relative to the aerosol behavior in PWR containment buildings during severe core damage accidents, 12:47446 (R;FR)
Diffusion
Radiation doses due to long-range transport of airborne radionuclides, 12:48398 (R;FI;In Finnish)
Radiation Monitoring
Development of a room air monitor system and workplace transuranic aerosol measurement system, 12:48391 (RA;US)
Measurement of particle losses in nuclear reactor airborne radiation monitors, 12:47451 (RA;US)
Performance testing of workplace air monitors using procedures based on draft ANSI N42.17B, 12:48386 (RA;US)

Room air monitoring at the Karlsruhe Nuclear Research Center, 12:48392 (RA;US)
Transuranic-aerosol-measurement system for the workplace or stack monitoring, 12:48390 (RA;US)
Radioecological Concentration
Detection capabilities and accuracy requirements of concentrations of radioactive material in air for radiation protection purposes, 12:48385 (RA;US)
RADIOACTIVE BIOLOGICAL WASTES
See RADIOACTIVE WASTES
RADIOACTIVE CLOUDS
Emission Computed Tomography
Proposal for the detection and tomographic reconstruction of a released radioactive cloud, 12:47449 (RA;ZA)
Radiation Detection
Proposal for the detection and tomographic reconstruction of a released radioactive cloud, 12:47449 (RA;ZA)
RADIOACTIVE EFFLUENTS
Chemical Properties
Chemical characteristics of material released during source term experiments project (STEP) in-pile tests: Part II, 12:47492 (RA;US)
RADIOACTIVE GASEOUS WASTES

RADIOACTIVE WASTE DISPOSAL
World nuclear fuel cycle requirements, 1987, 12:47604 (R;US)
Backfilling
Backfilling and sealing of tunnels, shafts and boreholes. Volume 2: Appendices, 12:47226 (R;CH;In German)
Licensing
Plans and schedules for implementation of US Nuclear Regulatory Commission responsibilities under the Low-Level Radioactive Waste Policy Amendments Act of 1985 (P.L. 99-240), 12:47595 (R;US)
Marine Disposal
Deepwater demersal fishes observed from the submersible AVALON (DSRV-2) off the Farallon Islands, 24 June 1985. Technical report (Final), 12:47228 (R;US)
Interim oceanographic description of the North-East-Atlantic site for the disposal of low-level radioactive waste. Vol. 2, 12:47225 (R;XN)
Risk Assessment
Designing the criteria of radioactive waste acceptability for ultimate burial, 12:47223 (RA;CS;In Czech)
Underground Disposal
Rockwell Hanford Operations effluents and solid waste burials during calendar year 1986, 12:47229 (R;US)
RADIOACTIVE WASTE FACILITIES
Design
Draft Underground Test Plan for site characterization and testing in an exploratory shaft facility in salt, 12:47207 (R;US)
Operation
Decontamination and radioactive waste disposal at UJV, 12:47221 (RA;CS;In Czech)
Planning
Greater-confinement disposal of low-level radioactive wastes, 12:47238 (BA;US)
RADIOACTIVE WASTE MANAGEMENT
National Program Plans
Plans and schedules for implementation of US Nuclear Regulatory Commission responsibilities under the Low-Level Radioactive Waste Policy Amendments Act of 1985 (P.L. 99-240), 12:47595 (R;US)
RADIOACTIVE WASTE PROCESSING
Research Programs
Study on removal and fixation for radioactive materials in dissolver off-gas, 12:47235 (R;JP;In Japanese)
Solidification
Research in the field of radioactive wastes in the Nuclear Research Institute, 12:47233 (RA;CS)
RADIOACTIVE WASTES

RADIOISOTOPES
Chemical Reactions
Influence of chemical form on cesium revaporization from the reactor coolant system, 12:47497 (RA;US)
Diffusion
The sensitivity index as a screening tooling in the uncertainty analysis of ground-water contaminant transport, 12:47214 (R;US)

Measuring Methods
Accelerator mass spectrometry for measurement of long-lived radioisotopes, 12:48294 (J;US)
Nuclear Data Collections
Table of radioactive isotopes, 12:48874 (B;US)
Phase Transformations
Influence of chemical form on cesium revaporization from the reactor coolant system, 12:47497 (RA;US)
Risk Assessment
Mixtures of toxic agents and attributable risk calculations, 12:48519 (J;US)
Synergism
Mixtures of toxic agents and attributable risk calculations, 12:48519 (J;US)
Vapors
Influence of chemical form on cesium revaporization from the reactor coolant system, 12:47497 (RA;US)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIOMETRIC GAGES
Investigation of the absorption and scattering behaviour of gamma radiation in fine grained hard coal and coal slurry due to the photo effect and Compton effect with regard to determining the ash and solid contents, 12:48237 (R;DE;In German)

RADIONUCLIDE MIGRATION
In environment.
Mathematical Models
Radiation doses due to long-range transport of airborne radionuclides, 12:48398 (R;FI;In Finnish)
Sensitivity Analysis
The sensitivity index as a screening tooling in the uncertainty analysis of ground-water contaminant transport, 12:47214 (R;US)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)

RADIOPHARMACEUTICALS
Biochemical Reaction Kinetics
Synthesis and direct estrogen receptor binding affinity of sup(80m)Br-labeled 1,1-BIS(p-hydroxyphenyl)-2-bromo-2-phenylethylene, 12:48484 (J;GB)
Biological Localization
Technetium complexes of substituted 1,2-bis(phosphino)-ethanes. 8. Reaction of Fe(DHMPE) with /sup 99m/TcO/sub 4//sup -/ (DHMPE = 1,2-bis(dihydroxymethylphosphino)-ethane), 12:48078 (RA;DD;In German)
Chemical Preparation
Annual Report 1985. Radioisotope Department, 12:48037 (R;DD;In German)
Application of the nucleophilic substitution reactions to the synthesis of no-carrier-added (NCA) ^{18}F-labeled radioligands, 12:48085 (J;GB)
Design, synthesis and evaluation of 2-deoxy-2-iodovinyl-branched carbohydrates as potential brain imaging agents, 12:48480 (J;GB)
Design, synthesis and evaluation of redox radiopharmaceuticals: a potential new approach for the development of brain imaging agents, 12:48482 (J;GB)
Design of a fully automated, in-beam, continuous-flow I-123 production system, 12:47252 (J;GB)
Improved synthesis of [1-^{11}C]putrescine, 12:48087 (J;GB)
New techniques for positron emission tomography in the study of human neurological disorders for the period June 15, 1987 through December 14, 1987, 12:48465 (R;US)
Positron-emitting analogs of SCH 23390 for the study of dopamine D1 receptors, 12:48486 (J;GB)
Radiation doses received by personnel during radiopharmaceutical preparation, 12:48983 (RA;ZA;In Afrikaans)
Radiohalogenated low-density-lipoprotein: potential agents for the visualization of atherosclerotic lesions, 12:48481 (J;GB)
Synthesis and direct estrogen receptor binding affinity of sup(80m)Br-labeled 1,1-BIS(p-hydroxyphenyl)-2-bromo-2-phenylethylene, 12:48484 (J;GB)
Synthesis of ^{11}C-labelled tracers for studies of functional MAO activity in brain using PET, 12:48485 (J;GB)
Synthesis of no-carrier-added (NCA) [18F]fluoroalkyl halides and their application in the syntheses of [^{18}F]fluoroalkyl derivatives of neurotransmitter receptor active compounds, 12:48083 (J;GB)
Synthesis of [^{11}C]SCH 23390 for dopamine D1 receptor studies, 12:48084 (J;GB)
Comparative Evaluations
Comparison of new Tc-99m-compounds with I-131 (123) renal radiopharmaceuticals, 12:48034 (RA;ZA)
Decontamination
Decontamination of radiopharmaceuticals, 12:47217 (RA;CS;In Czech)
Isotope Production
BLIP II: a new spallation radionuclide research and production facility (Brookhaven Linac Isotope Producer), 12:47253 (J;GB)
Production
Radiopharmaceuticals in Czechoslovakia, 12:48035 (RA;CS)
Putrescine
Improved synthesis of [1-^{11}C]putrescine, 12:48087 (J;GB)
Radiation Doses
Radiation doses received by personnel during radiopharmaceutical preparation, 12:48983 (RA;ZA;In Afrikaans)
Radiolysis
Radiolytic self-decomposition of a high specific activity positron emitting radiotracer, [^{18}F]-N-methylspiroperidol, 12:48086 (J;GB)
Radionuclide Kinetics
Calculation of the composition of yttrium citrate solutions, 12:48076 (RA;DD;In German)
Connections between physicochemical properties and biokinetics of tumoraffine M-ligand complexes, 12:48510 (RA;DD;In German)
Redox Process
Design, synthesis and evaluation of redox radiopharmaceuticals: a potential new approach for the development of brain imaging agents, 12:48482 (J;GB)
Stability
Stability constants of Fe-transferrin and Ga-transferrin complexes, 12:48074 (RA;DD;In German)
Stability of /sup 99m/Tc-DTPA-HSA, 12:48509 (RA;DD;In German)
Stabilization
Design, synthesis and evaluation of 2-deoxy-2-iodovinyl-branched carbohydrates as potential brain imaging agents, 12:48480 (J;GB)

RADIOPROTECTIVE SUBSTANCES
Biological Effects
Influence of some radioprotective and radiosensitizing compounds on the replicative and repair induced DNA synthesis of rats spleen cells in vitro, 12:48523 (R;DE;In German)

RADIOSENSITIZERS
Biological Effects
Influence of some radioprotective and radiosensitizing compounds on the replicative and repair induced DNA synthesis of rats spleen cells in vitro, 12:48523 (R;DE;In German)

RADIOSURGERY
See RADIOTHERAPY

RADIOTHERAPY
Meetings
South African Association of Physicists in Medicine and Biology: 25. Anniversary Congress, 18-22 March 1985, Cape Town, 12:48470 (R;ZA;In Afrikaans and English)
Radiation Sources
Optimal source position times in intracavitary radiotherapy, 12:48982 (RA;ZA)
Time Dependence
Optimal source position times in intracavitary radiotherapy, 12:48982 (RA;ZA)

RADIOTHORIUM
See THORIUM 228

RADIOWAVE RADIATION
See also SOLAR RADIO BURSTS
Frequency-dependent energy absorption in the body and tail of the rodent carcass exposed to radiofrequency radiation. Final report, 31 June-31 December 1985, 12:48533 (R;US)
RADIUM
Sorption
Radium removal using sorption to filter sand, 12:48439 (R;US)
RADIUM 218
Half-Life
Nuclear structure effects on alpha reduced widths, 12:48889 (R;US)
RADIUM 228
Sediments
Budgets and behaviours of uranium and thorium series isotopes in Santa Monica Basin sediments, 12:48410 (J;US)

RADIUM 228
E1-Transitions
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)
E2-Transitions
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)
Nuclear Deformation
Alignment effects and stable octupole deformation in the actinides, 12:48934 (RA;SU)
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)
RADON
Indoor Air Pollution
Development and demonstration of indoor radon-reduction measures for 10 homes in Clinton, New Jersey. Final report, April 1986-January 1987, 12:48384 (R;US)
Radioecological Concentration
Indoor radon, 12:48383 (RA;US)
RADON 222
Alpha Detection
Emanation investigations in the Ashkhabad seismic zone, 12:48542 (R;SU;In Russian)
Daughter Products
Effect of the sticking probability of radon daughters of airborne activity, 12:48381 (RA;ZA)
RAILROAD CARS
Waste Transportation
Study of joint use of vehicles for transportation of hazardous and nonhazardous materials. A report to Congress, 12:47585 (R;US)
RAIN
See also ACID RAIN
Chemical Composition
Nitrate in precipitation - a presentation of data from the European air chemistry network, 12:48330 (R;SE)
RAIN WATER
Isotope Ratio
Natural isotopic labelling in precipitation and initial formation of groundwater, 12:48420 (R;DE;In German)
Radionuclide Migration
Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1986, 12:48501 (R;US)
RAMAN SPECTROSCOPY
Prior to March 1983 this concept was indexed to RAMAN SPECTRA.
Research Programs
[The development of a new and novel Hadamard transform infrared spectrometer for analytical chemistry]: Progress report, May 15, 1985-now, 12:48278 (R;US)
RANKINE CYCLE
Cogeneration
Application of Organic Rankine Cycles (ORCs) to decentralized power generation. Preliminary study, 12:48165 (R;FI;In Finnish)
Computerized Simulation
Simulation model for evaporation equipment, 12:47656 (R;FI;In Finnish)
Diesel Engines
Application of Organic Rankine Cycles (ORCs) to decentralized power generation. Preliminary study, 12:48165 (R;FI;In Finnish)
Waste Heat Utilization
Application of Organic Rankine Cycles (ORCs) to decentralized power generation. Preliminary study, 12:48165 (R;FI;In Finnish)
RANKINE CYCLE POWER SYSTEMS
Cost
Application of Organic Rankine Cycles (ORCs) to decentralized power generation. Preliminary study, 12:48165 (R;FI;In Finnish)
RARE EARTH NUCLEI
For nuclear properties of rare earths.

Air Flow
Air flow distribution in an apartment house, 12:47662 (J;DE;In German)
Air Infiltration
Air flow distribution in an apartment house, 12:47662 (J;DE;In German)
Air Source Heat Pumps
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Cooling
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Energy Conservation
What works: Documenting the results of energy conservation in buildings, 12:47665 (B;US)
Heating
Exhaust air heat pumps. Commercial and official buildings, multi-family houses, 12:47642 (R;FI;In Finnish)
Space Heaters
Development of a pulse-combustion space heater. Final report, March 1982-April 1987, 12:47653 (R;US)
Water Heaters
Effect of water quality on residential-water-heater life-cycle efficiency. Final technical report, September 1985-December 1986, 12:47652 (R;US)
RESIDENTIAL SECTOR
Water Heating
Determinants of electricity use for residential water heating: the Hood River conservation project, 12:47663 (J;GB)
RESIDUES
See also ASHES
SMOKES
Leaching
Residues from the combustion of waste. Chemical and physical properties, 12:48406 (R;SE;In Swedish)
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESONANCE
Analytical Solution
Method of complex scaling, 12:49019 (RA;US)
Hamiltonians
Comments on the method of complex scaling to find physical resonance states, 12:49027 (RA;US)
Quantization
Multichannel resonance optimization with an optical potential, 12:49025 (RA;US)
RESONANCE CAVITIES
See CAVITY RESONATORS
RESOURCE CONSERVATION
Understanding paper recycling. Technical paper, 12:47591 (R;US)
Legal Aspects
Assessment of selected legal/institutional constraints to water conservation in the western states: a summary version, 12:47590 (R;US)
RESOURCE DEVELOPMENT
Economics
Investment appraisal in reservoir economics, 12:47146 (R;NO)
RESOURCE MANAGEMENT
Optimization
Petroleum field optimization. Comments on models and solution techniques, 12:47132 (R;NO)
RESPIRABLE DUSTS
See DUSTS
RESPONSE MODIFYING FACTORS
For biological effects.

Comparative Evaluations
Comparison of hearing protector rating methods and recommendations for use in the mining industry, 12:47119 (R;US)
RETROFITTING
Cost Estimation
Retrofit FGD [Flue Gas Desulfurization] cost estimating guidelines: Computer user's manual, 12:47359 (R;US)
REVERSE-FIELD PINCH
Configuration
Interchange stability of noncircular reversed field pinches, 12:49058 (R;US)
Elongation
Interchange stability of noncircular reversed field pinches, 12:49058 (R;US)
Magnetic Fields
A tapered poloidal gap for the reduction of field errors, 12:49135 (R;US)
Poloidal Field Divertors
A tapered poloidal gap for the reduction of field errors, 12:49135 (R;US)
RHINE RIVER
Water Pollution
Book of tables on the physico-chemical investigation of the Rhine water 1985, 12:48429 (R;DE;In German and French)
RHO-765 RESONANCES
Form Factors
Form factor πrhoγ in perturbative QCD, 12:48817 (R;SU)
Mass Formulae
Meson mass spectrum in generalized quark field model, 12:48792 (R;SU)
Particle Decay
Study on the inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons in quark jet of ν-barN interaction of charged current, 12:48759 (R;SU;In Russian)
Particle Production
Inclusive production of rho/sup 0/ and K/sup *0/ mesons in the ν-bar/sub μ/N charged-current interactions, 12:48758 (R;SU;In Russian)
Study on the inclusive characteristics of rho/sup 0/ and K*/sup 0/(890) mesons in quark jet of ν-barN interaction of charged current, 12:48759 (R;SU;In Russian)
Study on the baryon exchange π/sup +/ + p -> Δ/sup ++/ + rho/sup 0/ reaction at 3.94 GeV/c, 12:48762 (R;SU;In Russian)
Photoproduction
rho$^0\omega$ production in photon photon interactions, 12:48768 (R;US)
RHODIUM
Auger Electron Spectroscopy
Metal reflectors in the EUV, 12:48018 (BA;US)
Oxidation
Metal reflectors in the EUV, 12:48018 (BA;US)
RHODIUM BORIDES
Ultrasonic Testing
Relaxation attenuation in Er/sub 0.187/Ho/sub 0.813/Rh/sub 4/B/sub 4/ and HoRh/sub 4/B/sub 4/, 12:47877 (BA;US)
RHODIUM COMPLEXES
Crystal Structure
Neutron diffraction analysis of HRh[P(C_6H_5)$_3$]$_4$, 12:47887 (R;US)
Dissociation
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2^+$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
Molecular Structure
Neutron diffraction analysis of HRh[P(C_6H_5)$_3$]$_4$, 12:47887 (R;US)
Photochemical Reactions
Determination of carbide, carbyne, and carbene bond energies by gas-phase photodissociation of $RhCH_2^+$, $NbCH_2^+$, and $LaCH_2^+$, 12:48028 (J;US)
RHODIUM COMPOUNDS

Prior to 1978, known as RISOE RESEARCH ESTABLISHMENT and documents written before that date should be so indexed.
Research Programs
Department of Energy technology annual progress report, 1 January-31 December 1986, 12:49160 (R;DK)
RIVERS
See also COLUMBIA RIVER
RHINE RIVER
Flow Rate
Measurement of efficiency in hydro power plants using ultrasonic measurement of total water flow position related echosounding - area measurement, 12:47274 (R;SE;In Swedish)
Water Pollution
Investigation of material transport and load in tidal rivers, 12:48427 (R;DE)
Water Pollution Control
Environmental studies connected with establishing an incinerator plant in Trondheim. 4th quarterly report 1984, 12:48443 (R;NO;In Norwegian)
Water Pollution Monitors
Measurement of the turbulent impulse- and salt transport in the mixing zone of the river Elbe, 12:48428 (R;DE;In German)
RNA
Transcription
Transcriptional promoter and enhancer elements in the long terminal repeats (LTR) of endogenous murine leukemia virus (MuLV)-related proviral sequences, 12:48460 (J;US)
RNA POLYMERASE
See RNA
ROADWAY-POWERED ELECTRIC VEHICLES
Design
Roadway powered electric vehicle: an all-electric hybrid system, 12:47749 (RA;US)
Feasibility Studies
Roadway powered electric vehicle: an all-electric hybrid system, 12:47749 (RA;US)
Power Supplies
Inductive power transfer to an electric vehicle, 12:47750 (RA;US)
ROADWAYS (MINES)
See MINE ROADWAYS

ROBOTS
Coordinated Research Programs
US Department of Energy Nuclear Energy University program in robotics for advanced reactors: Program plan, FY 1987-1991, 12:48094 (R;US)
Economics
US Department of Energy Nuclear Energy University program in robotics for advanced reactors: Program plan, FY 1987-1991, 12:48094 (R;US)
Research Programs
Robotics and Intelligent Systems Program, 12:48098 (R;US)
Standards
US Department of Energy Nuclear Energy University program in robotics for advanced reactors: Program plan, FY 1987-1991, 12:48094 (R;US)
Uses
Telerobotic technology for nuclear and space applications, 12:49222 (J;US)
ROCK CAVERNS
Seasonal Thermal Energy Storage
Lyckebo project - Thermal Energy Storage in a Rock Cavern, 12:47324 (R;SE)
ROCK MECHANICS
Analysis of rock chips produced during water-jet-assisted cutting. Report of Investigations/1987, 12:47097 (R;US)
ROCK SALT
See SALT DEPOSITS
ROCKETS
Air Pollution Monitoring
Hydrogen chloride measurements in launch-vehicle exhaust clouds, 12:48291 (R;US)
Exhaust Gases
Hydrogen chloride measurements in launch-vehicle exhaust clouds, 12:48291 (R;US)
ROCKS
Gamma Spectroscopy
New developments in remote elemental analysis of rock formations, 12:47123 (RA;US)
RODS (FUEL)
See FUEL RODS
ROGOWSKI COIL
Operation
A tutorial on Rogowski coil theory and operation, 12:48289 (R;US)
Sensitivity
A tutorial on Rogowski coil theory and operation, 12:48289 (R;US)
ROOFS
Glazing
Glazed courtyards in the renovation of existing buildings, 12:47635 (R;SE;In Swedish)
Performance Testing
The Roof Research Center: A National User Facility for thermal performance and durability of roofing systems: Interim users manual, 12:47647 (R;US)
Test Facilities
The Roof Research Center: A National User Facility for thermal performance and durability of roofing systems: Interim users manual, 12:47647 (R;US)
ROOTS
Bioconversion
Organic matter and nutrients associated with fine root turnover in a white oak stand (Quercus albus), 12:47308 (J;US)
Decomposition
Organic matter and nutrients associated with fine root turnover in a white oak stand (Quercus albus), 12:47308 (J;US)
Production
Organic matter and nutrients associated with fine root turnover in a white oak stand (Quercus albus), 12:47308 (J;US)
ROTARY ENGINES
Gas Fuels
Endurance testing of a natural-gas-fueled rotary engine. Final report, March 1985-January 1987, 12:47716 (R;US)
Wear
Endurance testing of a natural-gas-fueled rotary engine. Final report, March 1985-January 1987, 12:47716 (R;US)
ROUTING
Programming
Microcomputer-based vehicle routing and scheduling: An overview, 12:47666 (R;US)
Schedules
Microcomputer-based vehicle routing and scheduling: An overview, 12:47666 (R;US)
ROVNO-2 REACTOR
Electron Antineutrinos
Antineutrino flux from power reactor, 12:47418 (R;SU;In Russian)
Power Distribution
Antineutrino flux from power reactor, 12:47418 (R;SU;In Russian)
RUBIDIUM
Order-Disorder Transformations
Electron-diffraction study of rubidium-intercalated graphite, 12:47917 (J;US)
RUBIDIUM SILICATES
Ion Implantation
Enhanced diffusion processes during heavy-ion irradiation of glasses, 12:47911 (R;US)
Physical Radiation Effects
Enhanced diffusion processes during heavy-ion irradiation of glasses, 12:47911 (R;US)
RUNOFF
Acidification
Lake acidification, 12:48434 (J;US)
PH Value
Lake acidification, 12:48434 (J;US)
RUTHENIUM
Chemical Reactions
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)
Fission Products
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)
Thermodynamic Properties
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)
RUTHENIUM ALLOYS
Electronic Structure
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Magnetic Properties
Band description of materials with localizing orbitals, 12:47858 (RA;US)

S

S CODES
Hanford Meteorological Station computer codes: Volume 4, The SUM computer code, 12:49213 (R;US)
Installation of the SAMPO 80 code for spectral analysis on the ES 1055 computer, 12:48271 (RA;DD;In German)
SACCHAROMYCES CEREVISIAE
Gene Recombination
Genetic recombination during mitosis and meiosis of Saccharomyces cerevisiae, 12:48463 (RA;US)
Photosensitivity
Sensitivities to monochromatic 254-nm and 365-nm radiation of closely related strains of Saccharomyces cerevisiae with differing repair capabilities, 12:48517 (J;GB)
SACLAY LINAC
Modifications
Perspectives in heavy ion physics with the Saclay booster, 12:48173 (R;FR)
SAFETY
For general aspects of safety and protection of personnel.

PICEANCE CREEK BASIN

SALT DEPOSITS
Creep
Calculation of creep induced volume reduction of the Weeks Island SPR [Strategic Petroleum Reserve] facility using 3-D finite element methods, 12:47164 (R;US)
Geophysical Surveys
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
Shaft Excavations
Draft Underground Test Plan for site characterization and testing in an exploratory shaft facility in salt, 12:47207 (R;US)
Site Characterization
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)

SALTON SEA
Geothermal Fluids
Downhole fluid sampling at the SSSDP [Salton Sea Scientific Drilling Project] California State 2-14 well, Salton Sea, California, 12:47332 (R;US)

SAMARIUM
Crystal Structure
New materials at high pressure, 12:47964 (RA;US)
Electronic Structure
New materials at high pressure, 12:47964 (RA;US)
Phase Studies
New materials at high pressure, 12:47964 (RA;US)

SAMARIUM ISOTOPES
Deformed Nuclei
Octupole instability in the heavy barium region, 12:48902 (R;US)
High Spin States
Octupole instability in the heavy barium region, 12:48902 (R;US)

SAMPLING
Manuals
Sampling guidelines for groundwater quality: Final report, 12:48425 (R;US)
Research Programs
Design of a sampling program, 12:48319 (R;US)

SAN FRANCISCO BAY
Baseline Ecology
Deepwater demersal fishes observed from the submersible AVALON (DSRV-2) off the Farallon Islands, 24 June 1985. Technical report (Final), 12:47228 (R;US)
Radioactive Waste Disposal
Deepwater demersal fishes observed from the submersible AVALON (DSRV-2) off the Farallon Islands, 24 June 1985. Technical report (Final), 12:47228 (R;US)

SANDIA LABORATORIES
Research Programs
An overview of Sandia's storage battery program, 12:47570 (BA;US)

SANDSTONES
Permeability
Estimates of fluid permeability from digital image analysis of porous media, 12:48536 (RA;US)
Geological characterization and statistical comparison of outcrop and subsurface facies: Shannon shelf sand ridges: Topical report, 12:47124 (R;US)
Petrology
Geological characterization and statistical comparison of outcrop and subsurface facies: Shannon shelf sand ridges: Topical report, 12:47124 (R;US)
Porosity
Geological characterization and statistical comparison of outcrop and subsurface facies: Shannon shelf sand ridges: Topical report, 12:47124 (R;US)
Reservoir Engineering
Development of petrophysical techniques for evaluating tight-gas sands. Annual technical report, March 1986-February 1987, 12:47175 (R;US)
Tight gas sands research program: field operations and analysis. Operating GRI's (Gas Research Institute's) mobile testing and control facility. Annual report 1986, 12:47173 (R;US)
Tight-Gas-Sands Research Program: field operations and analysis. Cooperative-well report, Arkla Exploration, T.P. Scott No. 5, Harrison County, Texas, 12:47174 (R;US)
Well Logging
Development of petrophysical techniques for evaluating tight-gas sands. Annual technical report, March 1986-February 1987, 12:47175 (R;US)
Well Stimulation
Tight gas sands research program: field operations and analysis. Operating GRI's (Gas Research Institute's) mobile testing and control facility. Annual report 1986, 12:47173 (R;US)
Tight-Gas-Sands Research Program: field operations and analysis. Cooperative-well report, Arkla Exploration, T.P. Scott No. 5, Harrison County, Texas, 12:47174 (R;US)

SANITARY LANDFILLS
Anaerobic Digestion
Evaluation test on a landfill gas-fired turbine at the Los Angeles County Sanitation District's Puente Hill Landfill Electric Generation Station. Air pollution test report, 12:47351 (R;US)
Design
Design of radioactive tailings disposal sites to last 1,000 years, 12:47237 (BA;US)
Remedial Action
Superfund Record of Decision (EPA Region 2): Florence Land Recontouring (FLR) landfill, Florence, Mansfield, and Springfield, New Jersey, June 1986. Final report, 12:48412 (R;US)
Superfund Record of Decision (EPA Region 4): A. l. Taylor site (Valley of the Drums), Bullitt County, Kentucky, June 1986. Final report, 12:48413 (R;US)
Superfund Record of Decision (EPA Region 5): Lake Sandy Jo/M and M landfill, Lake County, Indiana, September 1986. Final report, 12:48414 (R;US)
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)

SARCOMAS
Radiotherapy
Tumor radiobiology, 12:48475 (RA;US)

SASOL PROCESS
Environmental Impacts
Process description of the SASOL 1 coal-gasification plant. Topical report, 12:47030 (R;US)

SATURNE II
Drift Chambers
Diogene: synthesis and perspectives, 12:48229 (R;FR;In French)

SAVANNAH RIVER PLANT
Information Systems
Automated office support systems Savannah River Plant site summary, 12:49226 (R;US)

SCALAR MESONS
Scattering Amplitudes
On the asymptotics of arbitrary-angle scattering amplitudes of scalar particles, 12:48803 (RA;SU;In Russian)

SCALE MODELS
Comparative Evaluations
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)
Frequency Measurement
Wind loads on the Valhall quarters platform on the Norwegian continental shelf. Model tests and comparison with full-scale measurements, 12:48163 (R;NO)

SCANDIUM COMPOUNDS
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
SCATTERING

SEPARATION EQUIPMENT
Performance Testing
Performance testing of proprietary coal cleaning equipment, 12:47011 (R;XE)

SEPARATION PROCESSES
See also REPROCESSING
Comparative Evaluations
Oxygen plants for coal gasification: Experience at the Cool Water GCC [gasification combined cycle] Power Plant: Final report, 12:47024 (R;US)
SEQUOYAH NUCLEAR POWER PLANT UNIT-1
See SEQUOYAH-1 REACTOR
SEQUOYAH NUCLEAR POWER PLANT UNIT-2
See SEQUOYAH-2 REACTOR
SEQUOYAH-1 REACTOR
Daisy, Tennessee, USA
Chemistry
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
Source Terms
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
SEQUOYAH-2 REACTOR
Daisy, Tennessee, USA
Chemistry
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
Source Terms
Risk-significance of chemical issues affecting the source term, 12:47513 (RA;US)
SERPUKHOV SYNCHROTRON
Vacuum Systems
Calculation of the corrugated vacuum chamber longitudinal impedance, 12:48202 (R;SU;In Russian)
SETTLING PONDS
Remedial Action
Superfund Record of Decision (EPA Region 4): A. l. Taylor site (Valley of the Drums), Bullitt County, Kentucky, June 1986. Final report, 12:48413 (R;US)
SEWAGE
See also SEWAGE SLUDGE
Water Pollution Control
Environmental studies connected with establishing an incinerator plant in Trondheim. 4th quarterly report 1984, 12:48443 (R;NO;In Norwegian)
SEWAGE SLUDGE
Anaerobic Digestion
Energy recovery of the sludge in small sewage treatment plants, 12:47264 (R;FI;In Finnish)
Heat Recovery
Energy recovery of the sludge in small sewage treatment plants, 12:47264 (R;FI;In Finnish)
SEYFERT GALAXIES
Absorption Spectra
Ground-based 1- to 32-microns observations of ARP 220: evidence for a dust-embedded AGN?, 12:48667 (RA;US)
Spectrophotometery of Brackett lines in very luminous IRAS galaxies, 12:48673 (RA;US)
Configuration
Structure in the nucleus of NGC 1068 at 10 microns, 12:48676 (RA;US)
Emission Spectra
Interferometric CO observations of the ultraluminous IRAS galaxies ARP 220, IC 694/NGC 3690, NGC 6420 and NGC 7469, 12:48638 (RA;US)
Infrared Spectra
Far-infrared properties of optically-selected quasars and Seyfert galaxies, 12:48677 (RA;US)
Ground-based 1- to 32-microns observations of ARP 220: evidence for a dust-embedded AGN?, 12:48667 (RA;US)
Star formation in Seyfert galaxies, 12:48670 (RA;US)
Ionized Gases
Models relating the radio emission and ionised gas in Seyfert nuclei, 12:48675 (RA;US)
Radiowave Radiation
Models relating the radio emission and ionised gas in Seyfert nuclei, 12:48675 (RA;US)
Star Evolution
Circumnuclear starbursts in Seyfert galaxies, 12:48671 (RA;US)
Interferometric CO observations of the ultraluminous IRAS galaxies ARP 220, IC 694/NGC 3690, NGC 6420 and NGC 7469, 12:48638 (RA;US)
Spectrophotometery of Brackett lines in very luminous IRAS galaxies, 12:48673 (RA;US)
Star formation in Seyfert galaxies, 12:48670 (RA;US)
SHAFT EXCAVATIONS
Drilling Equipment
Drivage of staple shafts, 12:47077 (R;XE;In French)
Lining Processes
Drivage of staple shafts, 12:47077 (R;XE;In French)
Technology Utilization
Drivage of staple shafts, 12:47077 (R;XE;In French)
SHAFTS
Mechanical Vibrations
Vibration characteristics of an electrically driven Laval shaft, 12:47785 (R;DE;In German)
SHALES
Geologic Structures
Submarine debris-flow, slump-block, and turbidite deposits in Mancos Shale (Cretaceous) of northwestern Colorado, 12:47131 (J;US)
Radioactive Waste Disposal
Waste disposal by hydrofracture and application of the technology to the management of hazardous wastes, 12:47239 (BA;US)
SHALLOW LAND BURIAL
See GROUND DISPOSAL
SHAPED CHARGES
Prior to August 1979 CHEMICAL EXPLOSIVES and SHAPE were used.
Performance
An analytical-experimental comparison of 150 and 220 grain per foot linear shaped charge performance, 12:48297 (R;US)
SHATTERING
See FRAGMENTATION
SHEARER LOADERS
Computerized Control Systems
Field evaluation of automatic horizon control of ranging drum shearers, 12:47087 (R;XE)
Electronic Guidance
Field evaluation of automatic horizon control of ranging drum shearers, 12:47087 (R;XE)
SHELLS
Structural forms; for electron shells in atoms use ELECTRONIC STRUCTURE.
Deformation
Review of analysis methods to prevent thermal buckling, 12:47433 (R;FR;In French)
SHELTERS
Blast Effects
Vulnerability evaluation of the keyworker blast shelter. Final report, 12:49229 (R;US)
SHF RADIATION
See RADIOWAVE RADIATION
SHIELD SUPPORTS
Design
Shield supports simpler, lighter, more efficient, 12:47079 (R;XE;In French)
Performance Testing
Shield supports simpler, lighter, more efficient, 12:47079 (R;XE;In French)
Weight
Shield supports simpler, lighter, more efficient, 12:47079 (R;XE;In French)
SHIPMENT
See TRANSPORT
SHIPS
Accidents
Unimak Pass vessel analysis. Special and economic studies program technical report number 108. Final report, 12:47161 (R;US)
Propulsion
Shrimp vessel test of the GSM-Marshall automatic marine propeller, 12:47669 (R;US)
SHOPPING CENTERS
Energy Conservation
Saving of energy in supermarkets. Final report, 12:47645 (R;FI;In Finnish)

SHOTFIRING
See EXPLOSIVE FRACTURING
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Data Acquisition Systems
Data acquisition system of a calorimetric bench, 12:48206 (R;SU;In Russian)
SHUTTLE CARS
See TRACKLESS VEHICLES
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SID
See SUDDEN IONOSPHERIC DISTURBANCE
SIGMA-1385 RESONANCES
Particle Decay
Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers, 12:48755 (R;SU;In Russian)
Particle Production
Inclusive production of K/sup */ and E/sup */ resonances in the pp interactions at 360 GeV/c at European hybrid spectrometers, 12:48755 (R;SU;In Russian)
SIGMA-410 RESONANCES
Mass
Properties of the scalar σ meson at finite density, 12:48862 (J;US)
SIGMA-MINUS ATOMS
See HADRONIC ATOMS
SIGNAL CONDITIONING
Two-dimensional signal processing and storage and theory and applications of electromagnetic measurements. Annual report, 1 January-31 February 1986, 12:49165 (R;US)
SIGNALS
Validation
Empirical modeling of steady-state behavior of linear and nonlinear systems with application to signal validation: Topical report, 12:47442 (R;US)
SILANES
Formation Heat
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
Ionization Potential
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
SILICA
Chemical Properties
High conductivity glass electrolytes for sodium/sulfur batteries, 12:47573 (BA;US)
Crack Propagation
Mechanism of mechanical fatigue of fused silica: Progress report, July 1, 1985-August 31, 1987, 12:47893 (R;US)
Fatigue
Mechanism of mechanical fatigue of fused silica: Progress report, July 1, 1985-August 31, 1987, 12:47893 (R;US)
Ionic Conductivity
High conductivity glass electrolytes for sodium/sulfur batteries, 12:47573 (BA;US)
SILICA GEL
Nondestructive Analysis
Optical characterization of silica aerogel glass, 12:47912 (R;US)
Optical Properties
Optical characterization of silica aerogel glass, 12:47912 (R;US)
Shrinkage
Shrinkage and opacity of 100 kg/m/sup 3/ silica aerogel foam in liquid deuterium-tritium, 12:47928 (J;NL)
Stress Analysis
Stress measurements in sol-gel films, 12:48136 (R;US)
SILICATES
See also GARNETS
RUBIDIUM SILICATES
Polishing
Some speculations on the mechanisms of abrasive grinding and polishing, 12:47841 (R;US)
SILICEOUS ROCK
See SANDSTONES

SILICON
Adsorption
Si(111) surface oxidation: O ls core level study using synchrotron radiation, 12:47906 (R;FR)
Auger Electron Spectroscopy
Metal reflectors in the EUV, 12:48018 (BA;US)
Beam Optics
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Chemical Reaction Kinetics
Modulated molecular-beam studies of the surface chemistry of silicon reaction with reactive gases, 12:47999 (J;US)
Chemical Vapor Deposition
Modulated molecular-beam studies of the surface chemistry of silicon reaction with reactive gases, 12:47999 (J;US)
Crystal Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Noble gas atoms as impurities in silicon, 12:47896 (RA;US)
Deposition
Molecular-dynamics simulation of low-energy beam deposition of silicon, 12:47924 (J;US)
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Dislocations
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Electronic Structure
Ab-initio MO electronic structure calculations of defect-pair complexes in silicon, 12:47983 (RA;US)
Electronic states of Si_2 and Si^-_2 as revealed by photoelectron spectroscopy, 12:47996 (J;US)
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Noble gas atoms as impurities in silicon, 12:47896 (RA;US)
Etching
Modulated molecular-beam studies of the surface chemistry of silicon reaction with reactive gases, 12:47999 (J;US)
Interfaces
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Ion Channeling
Molecular-dynamics simulation of low-energy beam deposition of silicon, 12:47924 (J;US)
Ion Collisions
Molecular-dynamics simulation of low-energy beam deposition of silicon, 12:47924 (J;US)
Ion Implantation
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)
Molecule Collisions
Modulated molecular-beam studies of the surface chemistry of silicon reaction with reactive gases, 12:47999 (J;US)
Oxidation
Metal reflectors in the EUV, 12:48018 (BA;US)
Si(111) surface oxidation: O ls core level study using synchrotron radiation, 12:47906 (R;FR)
Photoelectric Effect
Electric field and infrared-induced recovery of metastability in amorphous hydrogenated silicon, 12:47307 (J;US)
Photoelectron Spectroscopy
Electronic states of Si_2 and Si^-_2 as revealed by photoelectron spectroscopy, 12:47996 (J;US)
Plasticity
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Stress Relaxation
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)

Trapping
Electric field and infrared-induced recovery of metastability in amorphous hydrogenated silicon, 12:47307 (J;US)

SILICON 28 TARGET
Electron Reactions
Investigation of electrons with /sup 6/Li, /sup 9/Be, /sup 12/C, /sup 28/Si nuclei in the region of quasi-elastic peak and δ/sub 33/-resonace, 12:48868 (R;SU;In Russian)
Oxygen 18 Reactions
Transfer reactions at high energy and ambiguities in heavy-ion potentials, 12:48957 (J;DE)

SILICON 29
Nuclear Magnetic Resonance
Inelastic neutron scattering from tetramethylammonium cations occluded within zeolites, 12:48006 (J;US)

SILICON ALLOYS
Dislocations
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Electronic Structure
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Etching
Planarization of metal films for multilevel interconnects, 12:47850 (P;US)
Interfaces
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Magnetic Properties
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Passivation
Planarization of metal films for multilevel interconnects, 12:47850 (P;US)
Plasticity
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)
Precipitation Hardening
Factors determining the morphology of precipitation in aluminum-germanium and aluminum-silicon alloys, 12:47828 (R;US)
Stress Relaxation
Relaxation of strained-layer semiconductor structures via plastic flow, 12:47915 (J;US)

SILICON CARBIDES
Chemical Vapor Deposition
Processing and properties of SiC/Nicalon composites, 12:47857 (R;US)
Crystal Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Electronic Structure
Local density theory for dynamical correlation corrections to single particle excitations in semiconductors, 12:47960 (RA;US)
Microstructure
Analytical electron microscopy characterization of boron in sintered α-SiC, 12:47856 (R;US)
Sintering
Analytical electron microscopy characterization of boron in sintered α-SiC, 12:47856 (R;US)
Ultrasonic Testing
NDE [nondestructive evaluation] of advanced structural ceramics, 12:48135 (R;US)

SILICON HYDRIDES
See SILANES

SILICON IONS
Electronic Structure
Electronic states of Si_2 and Si^-_2 as revealed by photoelectron spectroscopy, 12:47996 (J;US)
Photoelectron Spectroscopy
Electronic states of Si_2 and Si^-_2 as revealed by photoelectron spectroscopy, 12:47996 (J;US)

SILICON NITRIDES
Ultrasonic Testing
NDE [nondestructive evaluation] of advanced structural ceramics, 12:48135 (R;US)

SILICON OXIDES
See also SILICA
Annealing
Hydrogen annealing of P/sub b/ and E′ defect centers in oxidized silicon wafers, 12:47886 (R;US)
Crystal Defects
Hydrogen annealing of P/sub b/ and E′ defect centers in oxidized silicon wafers, 12:47886 (R;US)
E Centers
Hydrogen annealing of P/sub b/ and E′ defect centers in oxidized silicon wafers, 12:47886 (R;US)
Ion Implantation
Studies of boron implantation through photochemically deposited SiO_2 films on Hg/sub 1-x/Cd/sub x/Te. Technical report, 12:47885 (R;US)
Physical Radiation Effects
Hydrogen annealing of P/sub b/ and E′ defect centers in oxidized silicon wafers, 12:47886 (R;US)
Influence of ion implantation and gas exposure on the charge in SiO2 created by electronic excitation, 12:47888 (R;FR)
Raman Effect
Interference-enhanced Raman scattering from TiO_2/SiO_2 multilayers: measurement and theory, 12:47919 (J;US)

SILICON SOLAR CELLS
Activation Energy
Kinetic studies of the annealing behavior of a-Si:H p-i-n solar cells, 12:47306 (J;US)
Annealing
Kinetic studies of the annealing behavior of a-Si:H p-i-n solar cells, 12:47306 (J;US)
Performance
Kinetic studies of the annealing behavior of a-Si:H p-i-n solar cells, 12:47306 (J;US)
Photoelectric Effect
Electric field and infrared-induced recovery of metastability in amorphous hydrogenated silicon, 12:47307 (J;US)
Trapping
Electric field and infrared-induced recovery of metastability in amorphous hydrogenated silicon, 12:47307 (J;US)

SILVER
Crystal Growth
Simulation of the layer-growth dynamics in silver films: Dynamics of adatom clusters and vacancy clusters on Ag(100), 12:47825 (R;US)
Electronic Structure
High-resolution photoemission study of the electronic structure of the noble-metal (111) surfaces, 12:47844 (J;US)
Oxygen 16 Reactions
Nucleus-nucleus collisions at relativistic energies: The CERN WA80 experiment, 12:48878 (R;US)

SILVER ALLOYS
Physical Radiation Effects
About properties of point defects in metals, 12:47817 (R;FR)
Point Defects
About properties of point defects in metals, 12:47817 (R;FR)

SILVER HYDROXIDES
Binding Energy
OH-transition metal bonding, 12:47975 (RA;US)

SIMS
See MASS SPECTROSCOPY

SINTERED MATERIALS
Inspection
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)
Nondestructive Testing
Needs assessment for NDT [nondestructive testing] and characterization of ceramics: Assessment of inspection technology for green state and sintered ceramics, 12:48134 (R;US)

HBCU [Historically Black Colleges and Universities] solar radiation network annual report: FY 1986, 12:47295 (R;US)
On-Line Measurement Systems
Method and apparatus for measuring solar radiation in a vegetative canopy, 12:47297 (P;US)
Radiowave Radiation
Solar-Geophysical Data Number 513, May 1987. Part 1 (prompt reports). Data for April, March 1987 and late data, 12:48683 (R;US)
X Radiation
Solar-Geophysical Data Number 513, May 1987. Part 2. (comprehensive reports). Data for November 1986, and miscellanea, 12:48684 (R;US)
Space Environment Laboratory annual report - FY 1986, October 1, 1985 to September 30, 1986, 12:48696 (R;US)
SOLAR RADIO BURSTS
Solar-Geophysical Data Number 513, May 1987. Part 2. (comprehensive reports). Data for November 1986, and miscellanea, 12:48684 (R;US)
Asymmetry
Metric type-III burst asymmetry relative to simple bipolar active regions, 12:48550 (R;US)
SOLAR RECEIVERS
Application of solar technology to fuel production chemical processing, and thermochemical energy transport: Status and future, 12:47315 (R;US)
Absorption
Direct absorption receiver (DAR) systems assessment, 12:47317 (R;US)

Solar Flux
Direct absorption receiver (DAR) systems assessment, 12:47317 (R;US)
Thermal Efficiency
Direct absorption receiver (DAR) systems assessment, 12:47317 (R;US)
SOLAR THERMAL POWER PLANTS
Efficiency
Issues in space photovoltaic research and technology, 12:47309 (R;US)
Heat Storage
Fluoride salts and container materials for thermal energy storage applications in the temperature range 973 to 1400 K, 12:47313 (R;US)
SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS
SOLAR WATER HEATERS
Hot-water use in low-income households and the ability of integral solar water heaters to accommodate these requirements. Special report, 12:47648 (R;ZA)
SOLAR WIND
Quadrennial review of the magnetotail, 12:48690 (R;US)
Electron Density
Particle propagation channels in the solar wind, 12:48562 (RA;US)
SOLID CLUSTERS
Collisions
Hypervelocity-impact phenomena via molecular dynamics, 12:49003 (J;US)
SOLID ELECTROLYTES
[Nuclear magnetic resonance studies of ion motion in solid electrolytes]: Final report, 12:48991 (R;US)
Pulsed-field-gradient nuclear magnetic resonance spectrometer for direct measurement of ionic diffusion in solid electrolytes. Final report, 1 January 1985-31 December 1986, 12:48275 (R;US)
SOLID FUELS
Oil Shales
Review of needs for thermophysical property data on solid feedstocks. 2. Oil shale, 12:47184 (R;US)
Transport
Transport of solid fuels, 12:47305 (R;SE;In Swedish)
SOLID STATE LASERS
See also NEODYMIUM LASERS
Operation
Operation of Ho:YAG at intermediate temperatures, 12:48119 (BA;US)
Quantum Efficiency
Operation of Ho:YAG at intermediate temperatures, 12:48119 (BA;US)
SOLID STATE PHYSICS
Experimental and theoretical physics. Collection, 12:48996 (R;SU;In Russian)
Quantum radiophysics. Collection, 12:47805 (R;SU;In Russian)
Research Programs
Energy changes in transforming solids: Final report, April 1, 1982 to November 30, 1986, 12:47804 (R;US)
SOLID WASTES
See also MINERAL WASTES
WOOD WASTES
Combustion
Investigation concerning organic micro-pollutants from waste combustion, 12:47705 (R;SE;In Swedish)
Combustion Products
Residues from the combustion of waste. Chemical and physical properties, 12:48406 (R;SE;In Swedish)
Waste Disposal
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Waste Product Utilization
Atmospheric fluidized-bed combustion waste utilization in cement and sulfuric acid: Preliminary feasibility study, 12:47112 (R;US)
SOLIDS
Electron Capture
Electron capture from solids by positrons, 12:49000 (R;US)
SOLUTES
Chromatography
Method and apparatus for continuous annular electrochromatography, 12:47944 (P;US)
Electrochemistry
Method and apparatus for continuous annular electrochromatography, 12:47944 (P;US)
SOLVATED ELECTRONS
Hydration
Theoretical studies of electron and proton transfer processes in fluids: Progress report, August 1986 to September 1987, 12:47948 (R;US)
SOURCE TERMS
Chemical Reaction Kinetics
In-plant chemical phenomena potentially important to nuclear reactor severe accidents and their source terms, 12:47450 (RA;US)
Data Acquisition
CSNI source term task force review, 12:47531 (RA;US)
Radiation Detection
Improvement of a portable pressurized ionization chamber with the addition of a microprocessor datalogger, 12:48259 (R;US)
SOVIET UNION
See USSR
SPACE HEATERS
Pulse Combustion
Development of a pulse-combustion space heater. Final report, March 1982-April 1987, 12:47653 (R;US)
SPACE HEATING
Peat
Kitchen ranges for both central heating and cooking, 12:47658 (R;FI;In Finnish)
Wood Fuels
Kitchen ranges for both central heating and cooking, 12:47658 (R;FI;In Finnish)
SPACE HVAC SYSTEMS
Heating, ventilation, and air conditioning systems.
Energy Conservation
Saving of energy in supermarkets. Final report, 12:47645 (R;FI;In Finnish)
Energy Consumption
Decentralized HVAC and plumbing system. Preliminary study, 12:47641 (R;FI;In Finnish)
Regulations
Decentralized HVAC and plumbing system. Preliminary study, 12:47641 (R;FI;In Finnish)
SPACE LATTICES
See CRYSTAL LATTICES
SPACE POWER REACTORS
See also SPACE PROPULSION REACTORS
Efficiency
Issues in space photovoltaic research and technology, 12:47309 (R;US)
Fuel Pins
Review of diffusion barrier technology for application in SP-100 fuel pins, 12:47427 (R;US)
Specifications
Nuclear reactor power for an electrically powered orbital transfer vehicle, 12:47461 (J;US)
SPACE PROPULSION REACTORS
Ion Propulsion
NASA/USAF arcjet research and technology program, 12:47460 (R;US)
Mission Analysis
Nuclear powered Mars cargo transport mission utilizing advanced ion propulsion, 12:47459 (R;US)
SPACE VEHICLES
See also REENTRY VEHICLES
Coatings
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Cooling Systems
Estimating payload internal temperatures and radiator size for multimegawatt space platforms, 12:49155 (R;US)

Ion Propulsion
NASA/USAF arcjet research and technology program, 12:47460 (R;US)
Nuclear powered Mars cargo transport mission utilizing advanced ion propulsion, 12:47459 (R;US)
Laser Fusion Reactors
A fusion reactor for space applications, 12:49148 (J;US)
Mission Analysis
Nuclear powered Mars cargo transport mission utilizing advanced ion propulsion, 12:47459 (R;US)
Power Supplies
Liquid-droplet radiator in space: a parametric approach. Master's thesis, 12:47630 (R;US)
Solar Cell Arrays
Computer modeling of high-voltage solar array experiment using the NASCAP/LEO (NASA Charging Analyzer Program/Low Earth Orbit) computer code. Master's thesis, 12:47298 (R;US)
SPACECRAFT POWER SUPPLIES
Efficiency
Issues in space photovoltaic research and technology, 12:47309 (R;US)
SPACE-TIME
Many-Dimensional Calculations
On some higher-dimensional spacetimes, 12:49043 (R;JP)
SPARKS (ELECTRIC)
See ELECTRIC SPARKS
SPECTRA
S Codes
Installation of the SAMPO 80 code for spectral analysis on the ES 1055 computer, 12:48271 (RA;DD;In German)
SPECTRA UNFOLDING
Computer Codes
Program for spectra unfolding using a mini computer, 12:48249 (R;SU;In Russian)
SPECTROCHEMISTRY
See ABSORPTION SPECTROSCOPY
EMISSION SPECTROSCOPY
SPECTROMETERS
See also INFRARED SPECTROMETERS
MAGNETIC SPECTROMETERS
MASS SPECTROMETERS
NMR SPECTROMETERS
OPTICAL SPECTROMETERS
TIME-OF-FLIGHT SPECTROMETERS
ULTRAVIOLET SPECTROMETERS
Design
Conceptual design of a high-resolution $\pi 0$ spectrometer, 12:48261 (R;US)
Energy Resolution
Conceptual design of a high-resolution π^0 spectrometer, 12:48261 (R;US)
SPECTROSCOPY
See also ABSORPTION SPECTROSCOPY
BETA SPECTROSCOPY
EMISSION SPECTROSCOPY
LASER SPECTROSCOPY
MASS SPECTROSCOPY
MESON SPECTROSCOPY
PHOTOACOUSTIC SPECTROSCOPY
Research Programs
Energy transformation in molecular electronic systems: Research progress report for the period December 1, 1986-November 30, 1987, 12:47985 (R;US)
SPENT FUEL CASKS
Capacity
Feasibility and incentives for the consideration of spent fuel operating histories in the criticality analysis of spent fuel shipping casks (With allowance for burnup), 12:47204 (R;US)
Criticality
Feasibility and incentives for the consideration of spent fuel operating histories in the criticality analysis of spent fuel shipping casks (With allowance for burnup), 12:47204 (R;US)
Ultrasonic Testing
Ultrasonic determination of module form, size, and distribution in ductile cast iron, 12:47200 (RA;US)
SPENT FUEL STORAGE
See also DRY STORAGE
Charges
1987 Federal interim storage fee study: A technical and economic analysis, 12:47202 (R;US)
Criticality
KENO V.a validation of fuel pin experiments, 12:47198 (R;US)
SPENT FUELS
Burnup
Feasibility and incentives for the consideration of spent fuel operating histories in the criticality analysis of spent fuel shipping casks, 12:47204 (R;US)
Oxidation
Interim results from UO_2 fuel oxidation tests in air, 12:47201 (R;US)
Transport
1987 Federal interim storage fee study: A technical and economic analysis, 12:47202 (R;US)
Spent fuel transportation system limitations and opportunities, 12:47203 (R;US)
SPERM
See SPERMATOZOA
SPERMATIDS
See SPERMATOZOA
SPERMATOZOA
Gene Mutations
Biological dosimetry: Cytometric approaches to mammalian systems, 12:48521 (B;US)
SPHEROMAK DEVICES
Superconducting Magnets
The spheromak as a prototype for ultra-high-field superconducting magnets, 12:49142 (R;US)
SPICULES
See SOLAR PROMINENCES
SPIN
Random Phase Approximation
RPA spin-isospin nuclear response in the deep inelastic region, 12:48952 (R;FR)
SPLEEN
Physiology
Effect of vigorous short term exercise on the splenic platelet pool, 12:48490 (RA;ZA)
SPOIL BANKS
Land Reclamation
Ecological recovery after reclamation of toxic spoils left by coal surface mining. Phase 2. An assessment of environmental changes following intensive remedial treatments. Report for July 1975-September 1981, 12:47058 (R;US)
SR-OB REACTOR
See SUBCRITICAL ASSEMBLIES
STAINLESS STEEL M-50
Wear
Tribological properties of coal slurries, 12:47041 (R;US)
STAINLESS STEEL-304
Cavitation
Investigations of creep cavitation in Type 304 stainless steel: Final report, 8 May 1984-11 November 1986, 12:47813 (R;US)
Computer Graphics
Investigations of creep cavitation in Type 304 stainless steel: Final report, 8 May 1984-11 November 1986, 12:47813 (R;US)
Creep
Investigations of creep cavitation in Type 304 stainless steel: Final report, 8 May 1984-11 November 1986, 12:47813 (R;US)
Fracture Properties
Effect of loading rate and thermal aging on the fracture toughness of stainless steel alloys, 12:47819 (R;US)
Thickness
Precision metrology comparing ultrasonic and other techniques for the determination of steel thickness, 12:48141 (R;US)
STAINLESS STEEL-308
Fracture Properties
Effect of loading rate and thermal aging on the fracture toughness of stainless steel alloys, 12:47819 (R;US)
STAINLESS STEEL-316
Creep
Environmental degradation of 316 stainless steel in high temperature low cycle fatigue, 12:47830 (R;US)

Fatigue
Environmental degradation of 316 stainless steel in high temperature low cycle fatigue, 12:47830 (R;US)
Fracture Properties
Effect of loading rate and thermal aging on the fracture toughness of stainless steel alloys, 12:47819 (R;US)
STAINLESS STEEL-440
Wear
Tribological properties of coal slurries, 12:47041 (R;US)
STAINLESS STEELS
See also STAINLESS STEEL M-50
STAINLESS STEEL-304
STAINLESS STEEL-308
STAINLESS STEEL-316
STAINLESS STEEL-440
Corrosion
Corrosion and deposition studies of stainless steel exposed to aerosols containing Te, Cs, I, Sn, Mn, Ag and B_2O_3 at 300 to 1000°C in a reducing ($H_2/H_2O/N_2$) environment, 12:47498 (RA;US)
Failure Mode Analysis
Application of failure analysis techniques, 12:48139 (RA;US)
Phase Stability
The role of composition and microstructure gradients on weld metal properties and behavior, 12:47835 (RA;US)
STANDARDIZED TERMINOLOGY
Data Base Management
Definitions as database records (ASTM terminology management), 12:49150 (R;US)
STANDING CROP
See BIOMASS
STANFORD LINEAR COLLIDER
Design
The interdependence of parameters for TeV linear colliders, 12:48176 (R;US)
Parametric Analysis
The interdependence of parameters for TeV linear colliders, 12:48176 (R;US)
STAPHYLOCOCCUS
Radioimmunoassay
Experimental investigation into the effects of irradiation with mixed neutron-gamma-rays on the immune system as demonstrated by the model of immunity to Staphylococcal Enterotoxin B in rabbits, 12:48499 (R;DE;In German)
STAR CLUSTERS
Infrared Spectra
IRAS observations of the Pleiades, 12:48592 (RA;US)
Luminosity
Redistribution of OB star luminosity and the warming of nearby molecular clouds, 12:48582 (RA;US)
STAR EVOLUTION
Approximation for annihilation neutrino radiation power, 12:48557 (R;SU;In Russian)
Cosmological Models
Extremely Luminous Far-infrared Sources (ELFS), 12:48630 (RA;US)
Efficiency
CO observations of nearby galaxies and the efficiency of star formation, 12:48598 (RA;US)
Efficient star formation in the bright bar of M83, 12:48617 (RA;US)
Infrared Spectra
Evidence for extended IR emission in NGC2798 and NGC6240, 12:48674 (RA;US)
Luminosity
Submm observations of IRAS galaxies, 12:48599 (RA;US)
Masers
Mechanisms for the circular polarization of astrophysical OH masers in star-forming regions and the inferred magnetic fields, 12:48585 (RA;US)
Meetings
Star formation in galaxies, 12:48574 (R;US)
Star Models
Cloud fluid models of gas dynamics and star formation in galaxies, 12:48636 (RA;US)
History of gas in sprial galaxies, 12:48625 (RA;US)
Simple theory of bimodal star formation, 12:48624 (RA;US)
Star formation and dynamics in starburst nuclei, 12:48631 (RA;US)
STARS
See also GIANT STARS
Far Infrared Radiation
Very deep IRAS survey at l(II) = 97 deg, b(II) = +30 deg, 12:48651 (RA;US)
Infrared Radiation
Systematic identification of IRAS point sources, 12:48650 (RA;US)
Maps
Very deep IRAS survey at l(II) = 97 deg, b(II) = +30 deg, 12:48651 (RA;US)
STATISTICAL DATA
Use only in conjunction with literary indicator labels for data flagging.
Quality Control
An assessment of the quality of selected EIA [Energy Information Administration] data series: Petroleum supply data, 12:47150 (R;US)
STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.
Improved statement of optimality for sequential probability ratio tests, 12:49223 (J;US)
STEADY-STATE FUSION REACTORS
Design
High field, low current operation of engineering test reactors, 12:49128 (R;US)
Operation
High field, low current operation of engineering test reactors, 12:49128 (R;US)
STEAM
Flow Rate
Coso Monitoring Program. Summary report, October 1985-September 1986, 12:47326 (R;US)
STEAM COOLANT
See STEAM
STEAM GENERATORS
Crack Propagation
Residual and applied stress analysis of an alloy 600 row 1 U-bend: Final report, 12:47416 (R;US)
Nondestructive Testing
Automation of eddy current system for in-service inspection of turbine and generator rotor bores, 12:47397 (RA;US)
Flexible eddy current coil arrays, 12:47396 (RA;US)
Motivation of parametric studies. French recommendations concerning surveillance in exploitation. Program of steam generator inspection, 12:47463 (R;FR;In French)
Nondestructive evaluation of generator retaining rings, 12:47400 (RA;US)
Photothermal radiometric imaging for NDE, 12:47395 (RA;US)
PWR steam generator tubing sample library, 12:47415 (RA;US)
Signal processing development for steam generator tube inspection, 12:47388 (RA;US)
Steam generator inspection activities at the EPRI NDE center, 12:47405 (RA;US)
Verification of EPRI two-dimensional finite element computer code for eddy-current testing, 12:47389 (RA;US)
Stress Corrosion
Residual and applied stress analysis of an alloy 600 row 1 U-bend: Final report, 12:47416 (R;US)
Tubes
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
Ultrasonic Testing
Advanced ultrasonic techniques for steam generator tube in-service inspection, 12:47391 (RA;US)
EMAT sleeve-end inspection system, 12:47393 (RA;US)
Ultrasonic inspection of a steam generator upper shell-to-cone weld using automated inspection and data processing equipment, 12:47383 (RA;US)

STEAM INJECTION
Waste Water
Organic solute profile of water from two commercial tar sand processes, 12:47190 (R;US)
Proposed water treatment approach for commercial tar sand wastewaters, 12:47188 (R;US)
Wet-air oxidation of TS-1S wastewater, 12:47189 (R;US)
STEAM TURBINES
Equipment Protection Devices
Turbine protection system evaluation: Final report, 12:47435 (R;US)
Nondestructive Testing
Improvements to the safer rotor life prediction code, 12:47399 (RA;US)
Remote inspection of steam turbine blades, 12:47398 (RA;US)
Turbine Blades
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
Ultrasonic Testing
Turbine inspection activities at the EPRI NDE center, 12:47403 (RA;US)
STEELS
See also CARBON STEELS
CHROMIUM STEELS
FERRITIC STEELS
NICKEL STEELS
STAINLESS STEELS
Corrosion
Fluidized bed materials. Stage 5, final report, 12:48143 (R;SE;In Swedish and English)
Crack Propagation
Test of 6-in.-thick pressure vessels: Series 3, Intermediate test vessel V-8A: Tearing behavior of low-upper-shelf material, 12:47436 (R;US)
Erosion
Fluidized bed materials. Stage 5, final report, 12:48143 (R;SE;In Swedish and English)
Fracture Mechanics
Test of 6-in.-thick pressure vessels: Series 3, Intermediate test vessel V-8A: Tearing behavior of low-upper-shelf material, 12:47436 (R;US)
Manufacturing
Precision metrology comparing ultrasonic and other techniques for the determination of steel thickness, 12:48141 (R;US)
Stress Analysis
Test of 6-in.-thick pressure vessels: Series 3, Intermediate test vessel V-8A: Tearing behavior of low-upper-shelf material, 12:47436 (R;US)
Thickness
Precision metrology comparing ultrasonic and other techniques for the determination of steel thickness, 12:48141 (R;US)
STELLAR WINDS
Excludes SOLAR WIND.
Radiowave Radiation
Maps of millimeter wave emission from three galactic star-forming regions, 12:48583 (RA;US)
STELLARATOR TYPE REACTORS
Research Programs
Progress in stellarator/heliotron research, 1981-1986: Executive summary, 12:49140 (R;US)
STELLARATORS
See also JIPPT-2 DEVICE
WENDELSTEIN-7 STELLARATOR
Magnetic Islands
Lectures on topics in magnetic reconnection and transport in fusion devices, 12:49075 (R;JP)
Magnetic Surfaces
Lectures on topics in magnetic reconnection and transport in fusion devices, 12:49075 (R;JP)
Plasma Confinement
Lectures on topics in magnetic reconnection and transport in fusion devices, 12:49075 (R;JP)
STEM CELLS
Biological Radiation Effects
Growth of hemopoietic precursor cells (CFU-C) of adriamycin-treated or whole-body-irradiated dogs with or without bleomycin in vitro, 12:48497 (R;DE;In German)
STEMMING MATERIALS
Response Functions
Stemming column phenomenology, 12:48298 (R;US)
STEROIDS
Chemical Preparation
Synthesis von 6β-bromocholesta-1,4-dien-3-on, 12:47995 (RA;DD;In German)
Nuclear Magnetic Resonance
Synthesis von 6β-bromocholesta-1,4-dien-3-on, 12:47995 (RA;DD;In German)
STIMULATED EMISSION DEVICES
See LASERS
MASERS
STIRLING ENGINES
Performance
Stirling engines and irrigation pumping, 12:48166 (R;US)
STORAGE BATTERIES
See ELECTRIC BATTERIES
STORAGE BATTERIES (LEAD-ACID)
See LEAD-ACID BATTERIES
STORAGE DEVICES (DATA)
See MEMORY DEVICES
STORAGE FACILITIES
Environmental Effects
Gulf coast salt domes and the strategic petroleum reserve, 12:47165 (BA;US)
Volume
Calculation of creep induced volume reduction of the Weeks Island SPR [Strategic Petroleum Reserve] facility using 3-D finite element methods, 12:47164 (R;US)
STORAGE RINGS
See also SUPERCONDUCTING SUPER COLLIDER
Betatron Oscillations
Betatron oscillation degeneration in conditions of long-range focusing, 12:48186 (RA;SU;In Russian)
Cavity Resonators
Higher mode oscillation damping system in the UNK accelerating unit, 12:48225 (R;SU;In Russian)
Design
Physics with fast stored ions, 12:48222 (RA;US)
Diagrams
Higher mode oscillation damping system in the UNK accelerating unit, 12:48225 (R;SU;In Russian)
Experiment Planning
Heavy ion storage rings, 12:48223 (RA;US)
Physics with fast stored ions, 12:48222 (RA;US)
Instability
Transverse collective instability in the PSR [Proton Storage Ring], 12:48227 (R;US)
Proton Beams
Transverse collective instability in the PSR [Proton Storage Ring], 12:48227 (R;US)
Shields
Spectral investigation of neutron radiation in three-sectional concrete labyrinth from a californium-252 source, 12:48224 (R;SU;In Russian)
Specifications
Heavy ion storage rings, 12:48223 (RA;US)
Superconducting Magnets
Influence of heat release on superconducting dipole performance during UNK duty cycle, 12:48226 (R;SU;In Russian)
STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE
STORES
See COMMERCIAL BUILDINGS
STORMS
Environmental Effects
Lake acidification, 12:48434 (J;US)
STRAND BREAKS
Radioinduction
Radiation-induced DNA single-strand breaks in the intestinal mucosal cells of mice treated with the radioprotectors WR-2721 or 16-16 dimethyl prostaglandin E_2, 12:48514 (J;GB)

STRATEGIC PETROLEUM RESERVE
Program Management
Strategic Petroleum Reserve quarterly report, 12:47163 (R;US)
Resource Assessment
Naval Petroleum Reserve No. 2: Buena Vista Oil and Gas Field, Kern County, California: Proved reserves, Developed and undeveloped, Sections 6 and 8: Development history and exploitation techniques, Effective July 1, 1987: [Final technical report], 12:47133 (R;US)
Resource Development
Naval Petroleum Reserve No. 2: Buena Vista Oil and Gas Field, Kern County, California: Proved reserves, Developed and undeveloped, Sections 6 and 8: Development history and exploitation techniques, Effective July 1, 1987: [Final technical report], 12:47133 (R;US)
STRATOSPHERE
Ozone
Heavy ozone in the stratosphere, 12:48311 (R;GB)
STRAW
Combustion
Proceedings of an international workshop on straw as fuel, 12:47267 (R;GB)
Straw-fueled furnace with gas scrubbers, 12:47269 (R;DK;In Danish)
Global Aspects
Proceedings of an international workshop on straw as fuel, 12:47267 (R;GB)
STREAK CAMERAS
Design
Progress toward a crystal streak camera using tungsten bronze crystals for the electrooptic material, 12:48292 (R;US)
Optics
Progress toward a crystal streak camera using tungsten bronze crystals for the electrooptic material, 12:48292 (R;US)
Testing
Evaluation system for crystal streak cameras, 12:48290 (R;US)
STREAMER SPARK CHAMBERS
Energy Losses
Primary ionization measurement of relativistic particle in the RISK spectrometer streamer chamber, 12:48243 (RA;SU;In Russian)
Holography
Methods of high-resolution holography and optical analysis of particle tracks in track detectors by the radiation of partial coherence. Partial-coherent holographic detection of tracks of a high transverse resolution, 12:48258 (R;SU;In Russian)
Magnetic Spectrometers
Primary ionization measurement of relativistic particle in the RISK spectrometer streamer chamber, 12:48243 (RA;SU;In Russian)
Spark Counters
Streamer counter, 12:48244 (R;SU;In Russian)
STREPTOMYCES
Solvent Properties
Solubilization of coal by an extracellular product from Streptomyces setonii 75Vi2, 12:47034 (J;NL)
STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Coset representation of closed loop space in string field theory, 12:48846 (R;US)
String model of hadrons and their interactions, 12:48785 (R;SU)
Bosons
Analytical anomaly and heterotic string in the formalism on continual integration, 12:48850 (R;SU)
Compactification
Analytical anomaly and heterotic string in the formalism on continual integration, 12:48850 (R;SU)
Description of a class of superstring compactifications related to semi-simple Lie algebras, 12:48851 (R;SU)
Phenomenological implications of the blown-up orbifolds, 12:48861 (R;US)
Equations of Motion
Supersprings, 12:48845 (R;US)
Inverse Scattering Problem
Inverse scattering method and one-zone approximation in relativistic string theory, 12:48788 (R;SU)
Lie Groups
Description of a class of superstring compactifications related to semi-simple Lie algebras, 12:48851 (R;SU)
Mass Formulae
Gaugino masses in superstring inspired models, 12:48843 (BA;US)
Potentials
Effective potential and supersymmetry breaking in superstring models, 12:48863 (J;NL)
Quantization
Inverse scattering method and one-zone approximation in relativistic string theory, 12:48788 (R;SU)
Quantum Field Theory
Quantum theory of string in the four-dimensional space-time, 12:49031 (R;SU)
Supersymmetry
Gaugino masses in superstring inspired models, 12:48843 (BA;US)
STRIPED BASS
Population Dynamics
Hatchery and tank culture program for rearing striped bass, 12:47281 (RA;US)
Hudson River stocking program, 12:47280 (RA;US)
Mitigation of power plant impacts on striped bass in the Sacramento-San Joaquin Estuary, 12:47279 (RA;US)
Restoration of striped bass in the Patuxent River, 12:47282 (RA;US)
STRONTIUM 90
Beta Dosimetry
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
Beta Spectroscopy
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
Energy Spectra
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
Radioecological Concentration
Coral growth rings and the temporal history of nuclear ^{14}C/C and ^{90}Sr/Sr in the surface ocean: Final report, June 1, 1982-December 31, 1984, 12:48438 (R;US)
Radioisotope Generators
Investigation of a 1850-MBq-/sup 90/Sr//sup 90/Y-generator, 12:47251 (RA;DD;In German)
STRONTIUM OXIDES
Fabrication
Shock-induced chemical synthesis of phases similar to the high temperature superconductor oxides ((La-Sr-Cu-O) and (Y-Ba-Cu-O)), 12:47862 (R;US)
Impurities
Effect of magnetic impurities on high-temperature superconductivity in La/sub 1.85/Sr/sub 0.15/CuO_4, 12:47867 (J;US)
Specific Heat
Specific heat of the high T/sub c/ superconductors $(La,M)_2CuO_4$ and $YBa_2Cu_3O_7$ in magnetic fields (M = Ca,Sr), 12:47859 (R;US)
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Thermal Expansion
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)
Transition Temperature
Effect of magnetic impurities on high-temperature superconductivity in La/sub 1.85/Sr/sub 0.15/CuO_4, 12:47867 (J;US)
STRUCTURAL BEAMS
Frequency Response Testing
Assessment of structural integrity from forced vibration testing, 12:48100 (R;US)

Mechanical Vibrations
Assessment of structural integrity from forced vibration testing, 12:48100 (R;US)
STRUCTURAL BUCKLING
See DEFORMATION
STRUCTURAL MATERIALS
See BUILDING MATERIALS
STRUCTURE (CRYSTAL)
See CRYSTAL STRUCTURE
STRUCTURE FUNCTIONS
Moments Method
Effective way of reconstructing structure functions on their moments, 12:48789 (R;SU;In Russian)
Polarization
Polarization effects in hadron structure functions and in quark and gluon fragmentation, 12:48835 (J;US)
STRUCTURE (MOLECULAR)
See MOLECULAR STRUCTURE
STRUCTURES (BUILDINGS)
See BUILDINGS
STYRENE POLYMERS
See POLYSTYRENE
SU-3 GROUPS
Commutation Relations
On a realization of the exceptional algebras E/sub 6/ and E/sub 8/, 12:48839 (RA;SU;In Russian)
Irreducible Representations
On a realization of the exceptional algebras E/sub 6/ and E/sub 8/, 12:48839 (RA;SU;In Russian)
SUBCRITICAL ASSEMBLIES
Heterogeneous Reactor Cores
Method and computer code for three-dimensional calculation of a subcritical heterogeneous reactor with a source, 12:47454 (R;SU;In Russian)
T Codes
Method and computer code for three-dimensional calculation of a subcritical heterogeneous reactor with a source, 12:47454 (R;SU;In Russian)
SUBCRITICAL FLOW
See LAMINAR FLOW
SUBSIDENCE (GROUND)
See GROUND SUBSIDENCE
SUBSURFACE ENVIRONMENTS
Meetings
Microbiology of subsurface environments: Proceedings second investigators' meeting, 12:48402 (R;US)
SUBURBS
See URBAN AREAS
SUDDEN IONOSPHERIC DISTURBANCE
Solar-Geophysical Data Number 513, May 1987. Part 1 (prompt reports). Data for April, March 1987 and late data, 12:48683 (R;US)
SULFATES
Air Pollution
International Sulfur Deposition Model Evaluation (ISDME), 12:48365 (R;US)
Air Pollution Monitoring
Relationships involving fine-particle mass, fine-particle sulfur, and ozone during episodic periods at sites in and around St. Louis, Missouri, 12:48361 (R;US)
Oxidation
Disulfate ion as an intermediate to sulfuric acid in acid rain formation, 12:48379 (J;US)
Washout
Evaluation of the chemical and physical processes affecting sulfate and nitrate wet deposition, 12:48360 (R;US)
SULFUR
Chemical Reactions
Kinetics investigations of atmospheric chemical reactions. Doctoral thesis, 12:48368 (R;US)
Recovery
Characterization and disposal of coal-gasification waste products. Phase 2. Topical report, 1 May 1984-30 April 1986, 12:47060 (R;US)
SULFUR COMPOUNDS
See also SULFATES
Formation Heat
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
Ionization Potential
Theoretical thermochemistry. 3. A modified procedure for ionization energies of AH/sub n/ species, 12:48013 (J;US)
SULFUR DIOXIDE
Air Pollution
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)
International Sulfur Deposition Model Evaluation (ISDME), 12:48365 (R;US)
Air Pollution Abatement
Economic incentives for the reduction of sulfur dioxide emissions, 12:47064 (J;US)
Upgrading Upper Kittanning Seam coal quality to improve power plant performance: Coal cleaning test facility campaign report No. 6, 12:47025 (R;US)
Air Pollution Control
An experimental study of pulsed fluidized beds, 12:48159 (BA;US)
Economic incentives for the reduction of sulfur dioxide emissions, 12:47064 (J;US)
Air Pollution Monitoring
Methods of sampling and analysis for sulphur dioxide, oxides of nitrogen and particulate matter in the exhaust gases of large combustion plants, 12:48321 (R;XE)
Chemical Reactions
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly technical progress report No. 9, 12:47355 (R;US)
Environmental Effects
Air quality standard for SO_2 and particles (Directive 80-779-EEC) and its significance for the other main air pollutants, 12:48320 (R;XE)
Health Hazards
Air quality standard for SO_2 and particles (Directive 80-779-EEC) and its significance for the other main air pollutants, 12:48320 (R;XE)
Photolysis
Kinetics of the reaction between methyl radicals and oxygen atoms between 294 and 900 K, 12:48090 (J;US)
Removal
Natural gas/pulverized-coal cofiring performance testing at an electric-utility boiler. Topical report, June-October 1986, 12:47353 (R;US)
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Feasibility Studies
Atmospheric fluidized-bed combustion waste utilization in cement and sulfuric acid: Preliminary feasibility study, 12:47112 (R;US)
Marketing Research
Atmospheric fluidized-bed combustion waste utilization in cement and sulfuric acid: Preliminary feasibility study, 12:47112 (R;US)
SUN
Eclipse
Total solar eclipse of 17-18 March 1988, 12:48548 (R;US)
SUNSPOTS
Solar-Geophysical Data Number 513, May 1987. Part 1 (prompt reports). Data for April, March 1987 and late data, 12:48683 (R;US)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPERCONDUCTING COILS
Performance Testing
Test coil for the superconducting SUSE cyclotron, 12:48204 (R;DE;In German)
SUPERCONDUCTING COMPOSITES
Mechanical Properties
Mechanical properties of Cu-Nb and Cu-Nb/sub 3/Sn superconductors, 12:47820 (R;DE;In German)

Powder Metallurgy
Mechanical properties of Cu-Nb and Cu-Nb/sub 3/Sn superconductors, 12:47820 (R;DE;In German)

SUPERCONDUCTING MAGNETS
Design
The spheromak as a prototype for ultra-high-field superconducting magnets, 12:49142 (R;US)
Heat Flux
Influence of heat release on superconducting dipole performance during UNK duty cycle, 12:48226 (R;SU;In Russian)

SUPERCONDUCTING SUPER COLLIDER
Data Acquisition Systems
Data acquisition and filtering, subgroups B (models) and C (software): Summary of Working Group 5, 12:48200 (R;US)
Modelling microprocessor farms for SSC [Superconducting Super Collider] data acquisition, 12:48201 (R;US)

SUPERCONDUCTIVITY
Research Programs
Studies of heavy fermion systems: Progress report, July 1, 1986-December 31, 1987, 12:49009 (R;US)

SUPERCONDUCTORS
Commercialization
A role for national laboratories in enhancing economic competitiveness: The example of high-temperature superconductors: CNSS papers, No. 1, 12:47592 (R;US)
Mathematical Models
The itinerant resonating-valence-bond model for superconductivity, 12:49008 (R;US)
National Program Plans
A role for national laboratories in enhancing economic competitiveness: The example of high-temperature superconductors: CNSS papers, No. 1, 12:47592 (R;US)
Neutron Diffraction
Magnetic correlations and heavy fermion systems, 12:49007 (R;US)

SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERCRITICAL FLUID CHROMATOGRAPHY
Efficiency
Capillary supercritical fluid chromatography (SFC) and SFC/MS, 12:47946 (BA;US)
Modifications
Supercritical fluid chromatography/supersonic jet spectroscopy: Progress report, 6/1/87-8/31/87, 12:47935 (R;US)
Technology Assessment
Capillary supercritical fluid chromatography (SFC) and SFC/MS, 12:47946 (BA;US)
Uses
Capillary supercritical fluid chromatography (SFC) and SFC/MS, 12:47946 (BA;US)

SUPERFUND
Remedial Action
ROD (Record of Decision) annual report, FY 1986, 12:48417 (R;US)
Superfund Record of Decision (EPA Region 2): Florence Land Recontouring (FLR) landfill, Florence, Mansfield, and Springfield, New Jersey, June 1986. Final report, 12:48412 (R;US)
Superfund Record of Decision (EPA Region 4): A. l. Taylor site (Valley of the Drums), Bullitt County, Kentucky, June 1986. Final report, 12:48413 (R;US)
Superfund Record of Decision (EPA Region 3): Bruin Lagoon Site, Bruin Borough, Pennsylvania (second remedial action), September 1986. Final report, 12:48444 (R;US)
Superfund Record of Decision (EPA Region 3): Drake Chemical Site (Phase 2), Lock Haven, Clinton County, Pennsylvania (second remedial action), May 1986. Final report, 12:48445 (R;US)
Superfund Record of Decision (EPA Region 6): Odessa Chromium 1, Odessa, Texas, September 1986. Final report, 12:48446 (R;US)
Superfund Record of Decision (EPA Region 2): Lang Property, Pemberton Township, New Jersey, September 1986. Final report, 12:48447 (R;US)
Superfund Record of Decision (EPA Region 4) Gallaway Ponds Site, Gallaway, Tennessee, September 1986. Final report, 12:48448 (R;US)
Superfund Record of Decision (EPA Region 5): Lake Sandy Jo/M and M landfill, Lake County, Indiana, September 1986. Final report, 12:48414 (R;US)
Superfund Record of Decision (EPA Region 1): Baird and McGuire, Holbrook, Massachusetts, September 1986. Final report, 12:48415 (R;US)
Superfund Record of Decision (EPA Region 2): Marathon Battery Company site, Cold Spring, Putnam County, New York, September 1986. Final report, 12:48449 (R;US)
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)

SUPERLATTICES
Engineering modeling and simulation, 12:48150 (RA;US)

SUPERNOVAE
Computerized Simulation
Adiabatic supernova expansion into the circumstellar medium, 12:48687 (R;US)
Cosmic Neutrinos
Neutrinos in supernovae, 12:48552 (R;US)
Hydrodynamic Model
Adiabatic supernova expansion into the circumstellar medium, 12:48687 (R;US)

SUPEROXIDE RADICALS
O_2
Chemical Reactions
Interaction between copper(II)-arginine complexes and HO_2/O_2^- radicals, a pulse radiolysis study, 12:48015 (J;US)

SUPERSYMMETRY
New type of supersymmetric theories, 12:48802 (RA;SU;In Russian)
Radiative Corrections
Radiative corrections and supersymmetry in stochastically quantized non-Abelian field theory, 12:48847 (RA;SU;In Russian)
String Models
Effective potential and supersymmetry breaking in superstring models, 12:48863 (J;NL)
Symmetry Breaking
Effective potential and supersymmetry breaking in superstring models, 12:48863 (J;NL)
Symmetry breakings in supersymmetric quantum chromodynamics with N/sub color/ < N/sub flavor/, 12:48840 (R;JP)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY

SUPPORTS
See also FOUNDATIONS
Performance Testing
Improvement of roadway stability by bolting and a composite support system, 12:47072 (R;XE;In German)

SUPPORTS (CATALYST)
See CATALYST SUPPORTS

SURFACE AIR
Radionuclide Migration
Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1986, 12:48501 (R;US)

SURFACE MINING
Economics
Opencast coal mining in Great Britain, 12:47070 (R;GB)
Environmental Impacts
Ecological recovery after reclamation of toxic spoils left by coal surface mining. Phase 2. An assessment of environmental changes following intensive remedial treatments. Report for July 1975-September 1981, 12:47058 (R;US)
Land Pollution Control
Opencast coal mining in Great Britain, 12:47070 (R;GB)
Operation
Problems connected with the utilization of low-grade lignite, 12:47101 (R;XU)

Research Programs
Coal research projects. Exploration, mining and preparation - 1987 supplement, 12:47092 (R;GB)
Spoil Banks
Ecological recovery after reclamation of toxic spoils left by coal surface mining. Phase 2. An assessment of environmental changes following intensive remedial treatments. Report for July 1975-September 1981, 12:47058 (R;US)
Technology Utilization
Opencast coal mining in Great Britain, 12:47070 (R;GB)
SURFACE PROPERTIES
Research Programs
The structure and reactivity of heterogeneous surfaces and study of the geometry of surface complexes: Progress summary, January 1, 1987-December 31, 1987, 12:48992 (R;US)
SURFACE WATERS
See also ESTUARIES
LAKES
PONDS
Environmental Transport
Predictive models and field studies of the fate of complex mixtures, 12:48435 (BA;US)
Solubility of mixtures and its application to toxicity, 12:48436 (BA;US)
Radionuclide Migration
Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1986, 12:48501 (R;US)
Water Pollution
Superfund Record of Decision (EPA Region 3): Bruin Lagoon Site, Bruin Borough, Pennsylvania (second remedial action), September 1986. Final report, 12:48444 (R;US)
SURFACE-ACTIVE AGENTS
See SURFACTANTS
SURFACES
Computer Graphics
Investigations of creep cavitation in Type 304 stainless steel: Final report, 8 May 1984-11 November 1986, 12:47813 (R;US)
SURFACTANTS
Chemical Composition
Carboxymethylated ethoxylated surfactants: Annual report, 12:47134 (R;US)
Liquid Column Chromatography
High-performance liquid chromatography methods for characterization of a plating bath brightener additive: Final report, 12:47934 (R;US)
Performance
Carboxymethylated ethoxylated surfactants: Annual report, 12:47134 (R;US)
Recovery
A study of micellar-enhanced ultrafiltration: Final technical report, March 1, 1984-February 28, 1987, 12:48424 (R;US)
SURRY POWER STATION UNIT-1

Hadron Reactions
Characteristics of atomic nuclei employed as targets in high-energy nuclear collisions, 12:48945 (R;SU)

TAXES
Comparative Evaluations
Alternative petroleum taxation systems. Comparisons under uncertainty, 12:47148 (R;NO)
Econometrics
Effects of energy tax reforms on the production process, 12:47579 (R;FI;In Finnish)
Energy Consumption
Effects of energy tax reforms on the production process, 12:47579 (R;FI;In Finnish)

TECHNETIUM 99
Chemical Preparation
Studies on the isolation of pure /sup 99/Tc-pertechnetate from Tc-ligand residues, 12:48044 (RA;DD;In German)
Isotopic Exchange
Comparison of new Tc-99m-compounds with I-131 (123) renal radiopharmaceuticals, 12:48034 (RA;ZA)
Quality Control
Investigation of the quality of sterile /sup 99/Mo//sup 99m/Tc-generators of several different producers, 12:48071 (RA;DD;In German)
Radioecological Concentration
The transport of uranium and technetium through the unsaturated tuffs, Yucca Mountain, Nevada, 12:47212 (R;US)
Radioisotope Generators
Investigation of the quality of sterile /sup 99/Mo//sup 99m/Tc-generators of several different producers, 12:48071 (RA;DD;In German)
Uptake
Determination of normal TC-99 thyroid uptake with different background corrections, 12:48472 (RA;ZA)

TECHNETIUM COMPLEXES
Band Theory
SCF-X/sub α/-calculations on the $[TcOS_4]^{1-}$ cluster, 12:48081 (RA;DD;In German)
Biological Localization
Preparation of /sup 99m/Tc-Sn-N-(2,6-diethylacetanilido)-iminodiacetate from ROTOP-EHIDA, 12:48054 (RA;DD;In German)
Stability of /sup 99m/Tc-DTPA-HSA, 12:48509 (RA;DD;In German)
Chelates
Complexes of technetium-99 with monothio-β-carbonyl compounds, 12:48052 (RA;DD;In German)
Chemical Composition
Phosphite complexes of technetium, 12:48046 (RA;DD;In German)
Chemical Preparation
Hexakis(dimethyl-phenylphosphonit)technetium(I)-tetraphenyl borate, 12:48050 (RA;DD;In German)
Investigation of lipophilic pH shift agents, 12:48049 (RA;DD;In German)
Nitrido complexes of technetium. 4. Tetrakis(isothiocyanato)-nitrido technetium(V), 12:48079 (RA;DD;In German)
Phosphite complexes of technetium, 12:48046 (RA;DD;In German)
Preparation and characterization of thionitrosyl complexes of technetium(I) and technetium(II), 12:48051 (RA;DD;In German)
Preparation and characterization of technetium with Schiff bases containing O, N, and S, 12:48053 (RA;DD;In German)
Preparation of /sup 99m/Tc-Sn-N-(2,6-diethylacetanilido)-iminodiacetate from ROTOP-EHIDA, 12:48054 (RA;DD;In German)
Technetium complexes of substituted 1,2-bis(phosphino)-ethanes. 7. The Tc-DHMPE-complex (DHMPE = 1,2-bis(dihydroxymethylphosphino)-ethane), 12:48045 (RA;DD;In German)
Technetium complexes of substituted 1,2-bis(phosphino)-ethanes. 8. Reaction of Fe(DHMPE) with /sup 99m/TcO/sub 4//sup -/ (DHMPE = 1,2-bis(dihydroxymethylphosphino)-ethane), 12:48078 (RA;DD;In German)
Distribution Functions
Technetium complexes with pH shift behavior, 12:48048 (RA;DD;In German)
Electron Spin Resonance
EPR of paramagnetic Tc complex compounds. 3. Nitrido complexes of Tc(VI), 12:48072 (RA;DD;In German)
EPR of paramagnetic Tc complex compounds. 4. EPR investigation of (Ph/sub 4/As)[TcNCl/sub 4//TcOCl/sub 4/] monocrystals, 12:48080 (RA;DD;In German)
In Vitro
Determination of in vitro properties of neutral, lipophilic technetium complexes with 1,1-dichalcogeno ligands, 12:48065 (RA;DD;In German)
In vitro stability of ROTOP bone kits (/sup 99m/Tc.), 12:48066 (RA;DD;In German)
Infrared Spectra
Preparation and characterization of thionitrosyl complexes of technetium(I) and technetium(II), 12:48051 (RA;DD;In German)
Ion Exchange
Nitrido complexes of technetium. 3. UV/VIS spectroscopic investigation of the ligand exchange of TcNBr/sub 4//sup -/ with KSCN, 12:48047 (RA;DD;In German)
Ligands
Determination of in vitro properties of neutral, lipophilic technetium complexes with 1,1-dichalcogeno ligands, 12:48065 (RA;DD;In German)
Nitrido complexes of technetium. 3. UV/VIS spectroscopic investigation of the ligand exchange of TcNBr/sub 4//sup -/ with KSCN, 12:48047 (RA;DD;In German)
PH Value
Technetium complexes with pH shift behavior, 12:48048 (RA;DD;In German)
Quantitative Chemical Analysis
Polarographic method for determining the contents of ascorbic acid and tin(II) chloride in the /sup 99m/Tc-MDP kit (MDP = methylene diphosphonate), 12:48068 (RA;DD;In German)
Radionuclide Kinetics
Investigation of lipophilic pH shift agents, 12:48049 (RA;DD;In German)
Skeleton
In vitro stability of ROTOP bone kits (/sup 99m/Tc.), 12:48066 (RA;DD;In German)
Tissue Distribution
Autoradiographic studies on tissue distribution of /sup 99m/Tc(I) and /sup 99/Tc(I)-DMPE complexes in the rat, 12:48506 (RA;DD;In German)
Preparation, testing of uptake by the isolated rat heart and preliminary results of tissue distribution of [/sup 99m/Tc]technetium(I)-hexakis(t-butylisonitril), a potential perfusion indicator for myocardial demonstration, 12:48505 (RA;DD;In German)

TECHNETIUM COMPOUNDS
See also PERTECHNETATES
Labelling
Analytical methods for studying the labelling of HSA with /sup 99m/Tc, 12:48067 (RA;DD;In German)

TELLURIUM
Chemical Reactions
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)
Chemical State
Chemical forms of fission product tellurium in a severe reactor accident, 12:47499 (RA;US)
Fission Products
Chemical forms of fission product tellurium in a severe reactor accident, 12:47499 (RA;US)
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)
Thermodynamic Properties
Thermodynamic behaviour of fission products at high temperatures: ruthenium and tellurium, 12:47500 (RA;US)

TELLURIUM 122 TARGET
Deuteron Reactions
Studies on the stability of tellurium dioxide targets under irradiation with deuterons, 12:48043 (RA;DD;In German)

Stability
Studies on the stability of tellurium dioxide targets under irradiation with deuterons, 12:48043 (RA;DD;In German)

See ELECTRON TEMPERATURE

TENNESSEE
Surface Mining
Ecological recovery after reclamation of toxic spoils left by coal surface mining. Phase 2. An assessment of environmental changes following intensive remedial treatments. Report for July 1975-September 1981, 12:47058 (R;US)

TERBIUM 146
Beta Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Proton Emission Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)

TERBIUM COMPLEXES
Stability
Complex formation of lanthanoids with citrate ligands, 12:48077 (RA;DD;In German)

TERRORISM
Combating terrorism - a response in kind. Student essay, 12:47800 (R;US)
Chemical Warfare
Chemical warfare in the Third World. Summary report (Final), 12:47801 (R;US)

TERTIARY RECOVERY
See ENHANCED RECOVERY

TEST WELLS
See EXPLORATORY WELLS

TETRAMETHYLENEDIAMINE
See PUTRESCINE

TEXAS
Natural Gas Deposits
Tight gas sands research program: field operations and analysis. Operating GRI's (Gas Research Institute's) mobile testing and control facility. Annual report 1986, 12:47173 (R;US)
Tight-Gas-Sands Research Program: field operations and analysis. Cooperative-well report, Arkla Exploration, T.P. Scott No. 5, Harrison County, Texas, 12:47174 (R;US)

TEXAS A AND M CYCLOTRON
Research Programs
Cyclotron based nuclear science: Progress report, April 1, 1986-March 31, 1987, 12:48866 (R;US)

TEXTILE INDUSTRY
Energy Conservation
Application of chemicals to substrates without the use of liquids: Solid-on-solid (SOS) processing: Final technical report, August 1, 1984-July 31, 1986, 12:47670 (R;US)
Hazardous Materials
Formaldehyde-exposure characterization in garment-manufacturing plants: a composite summary of three in-depth industrial-hygiene surveys, 12:48342 (R;US)

TEXTILES
Coloration
Application of chemicals to substrates without the use of liquids: Solid-on-solid (SOS) processing: Final technical report, August 1, 1984-July 31, 1986, 12:47670 (R;US)
Decontamination
Decontamination of fabric, 12:47219 (RA;CS;In Czech)
Fabrication
Application of chemicals to substrates without the use of liquids: Solid-on-solid (SOS) processing: Final technical report, August 1, 1984-July 31, 1986, 12:47670 (R;US)

TFTR DEVICE
See TFTR TOKAMAK

TFTR REACTORS
See TFTR TOKAMAK

TFTR TOKAMAK
Electron Density
MIRI: A multichannel far-infrared laser interferometer for electron density measurements on TFTR [Tokamak Fusion Test Reactor], 12:49096 (R;US)
Plasma Diagnostics
X-ray multilayer optic development for plasma diagnostic and source enhancement, 12:49113 (BA;US)

THALLIUM 205
Nuclear Structure
Electron interactions with nuclei: Progress report, 12:48867 (R;US)

THERMAL INSULATION
Materials Testing
Development of a small-scale test apparatus for the evaluation of thermal-barrier materials. Technical communications report, 12:47881 (R;CA)
Research Programs
Effects of exposure testing on pipe insulation: FY 1986, progress report, 12:47322 (R;US)
Weathering
Effects of exposure testing on pipe insulation: FY 1986, progress report, 12:47322 (R;US)

THERMAL MASS
Computerized Simulation
Simulation of the SWTMS [Southwest Thermal Mass Study] test cells using the DOE-2.1A model, 12:47646 (R;US)
Testing
Influence of the thermal mass and heat distribution system on the energy consumption of small houses, 12:47640 (R;FI;In Finnish)

THERMAL POLLUTION (AIR)
See AIR POLLUTION

THERMAL POLLUTION (WATER)
See WATER POLLUTION

THERMAL POWER PLANTS
See also COMBINED-CYCLE POWER PLANTS
FOSSIL-FUEL POWER PLANTS
NUCLEAR POWER PLANTS
SOLAR THERMAL POWER PLANTS
WOOD-FUEL POWER PLANTS
Heat Pumps
Natural gas driven heat pump in district heating, 12:47710 (R;FI;In Finnish)

THERMOCHEMICAL PROCESSES
See also COMBUSTION
Calculation Methods
Electron-transfer mechanisms in thermochemical gasification: a quantitative quantum-mechanical investigation. Annual report, January-December 1986, 12:47032 (R;US)
Electron Transfer
Electron-transfer mechanisms in thermochemical gasification: a quantitative quantum-mechanical investigation. Annual report, January-December 1986, 12:47032 (R;US)

THERMOLUMINESCENT DOSEMETERS
Annealing
Harsaw atlas TLD reading-off equipment to CaF/sub 2/:Dy TL-dosemeters, and an annealing procedure for CaF/sub 2/:Dy TL-dosemeters, 12:48266 (R;NO;In Norwegian)
Readout Systems
Harsaw atlas TLD reading-off equipment to CaF/sub 2/:Dy TL-dosemeters, and an annealing procedure for CaF/sub 2/:Dy TL-dosemeters, 12:48266 (R;NO;In Norwegian)
Optical readout method for solid state dosemeters, 12:48273 (J;GB)

THERMONUCLEAR IGNITION
Computerized Simulation
Tokamak fusion reactor start-up simulation, 12:49147 (J;US)
T Codes
Tokamak fusion reactor start-up simulation, 12:49147 (J;US)

THERMONUCLEAR POWER PLANTS
Reactor Safety
Some safety considerations of liquid lithium as a fusion breeder material, 12:49132 (R;US)

THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.

See also D-D REACTORS
LASER FUSION REACTORS
STEADY-STATE FUSION REACTORS
STELLARATOR TYPE REACTORS
TOKAMAK TYPE REACTORS

First Wall
Report on the joint meeting of the Division of Development and Technology Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups, 12:49121 (R;US)

Heat Flux
Report on the joint meeting of the Division of Development and Technology Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups, 12:49121 (R;US)

Plasma Disruption
Some results of parametric analysis of plasma current disruption effects in a reactor-tokamak, 12:49136 (R;SU;In Russian)

Radioactivation
Low activation ferritic alloys for nuclear fusion reactors, 12:49131 (R;US)

Research Programs
Report on the joint meeting of the Division of Development and Technology Plasma/Wall Interaction and High Heat Flux Materials and Components Task Groups, 12:49121 (R;US)

Thermonuclear Reactions
Polarized advanced fuel reactors, 12:49141 (R;US)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THERMOPHOTOVOLTAIC CONVERSION
Apparatus for thermophotovoltaic conversion, 12:47300 (R;IT;IT)

THESAURI
See STANDARDIZED TERMINOLOGY

THIN FILMS

Deposition
Thin film microstructures: Simulation and theory, 12:47900 (R;US)

Microstructure
Thin film microstructures: Simulation and theory, 12:47900 (R;US)

Stress Analysis
Stress measurements in sol-gel films, 12:48136 (R;US)

THIOIC ACIDS

Radiosensitivity Effects
Radiation-induced DNA single-strand breaks in the intestinal mucosal cells of mice treated with the radioprotectors WR-2721 or 16-16 dimethyl prostaglandin E_2, 12:48514 (J;GB)

THIOPHENE

Catalysts
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)

Desulfurization
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)

Hydrogenation
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January-31 March 1986, 12:47019 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 July 1985-30 September 1985, 12:47017 (R;US)

THIRD-HARMONIC GENERATION
See HARMONIC GENERATION

THORIUM

Radiometric Analysis
Calibration and experimental comparison of the active well coincidence counter and PHONID-II, 12:47243 (R;FR)

THORIUM 228

Sediments
Budgets and behaviours of uranium and thorium series isotopes in Santa Monica Basin sediments, 12:48410 (J;US)

THORIUM 230

Sediments
Budgets and behaviours of uranium and thorium series isotopes in Santa Monica Basin sediments, 12:48410 (J;US)

THORIUM 232

Sediments
Budgets and behaviours of uranium and thorium series isotopes in Santa Monica Basin sediments, 12:48410 (J;US)

THORIUM 232 TARGET

Carbon 12 Reactions
Experimental study of α-fission fragment correlations in the $^{232}Th(^{12}C,\alpha f)$ reaction, 12:48899 (R;SU)

Neutron Reactions
Neutron scattering studies in the actinide region: Progress report for period August 1, 1986-July 30, 1987, 12:48897 (R;US)

THORIUM 234

Leaching
Contribution to study of effects consecutive to alpha decay of uranium 238 in some uranium compounds and uranium ores, 12:48033 (R;FR;In French)

Sediments
Budgets and behaviours of uranium and thorium series isotopes in Santa Monica Basin sediments, 12:48410 (J;US)

E1-Transitions
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)

E2-Transitions
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)

Nuclear Deformation
Alignment effects and stable octupole deformation in the actinides, 12:48934 (RA;SU)
Octupole shapes and shape changes at high spins in Ra and Th nuclei, 12:48962 (J;NL)

THREE MILE ISLAND-2 REACTOR
Dauphin County, Pennsylvania, USA

Cesium
The release and transport of fission product cesium in the TMI-2 accident, 12:47505 (RA;US)

Chemical Analysis
Insights on severe accident chemistry from TMI-2, 12:47501 (RA;US)
TMI-2 reactor coolant system radionuclide accumulation rates, 12:47504 (RA;US)

Chemical Reactions
Fission product behavior in the TMI-2 core: preliminary evaluation of transport and chemistry, 12:47502 (RA;US)
Insights on severe accident chemistry from TMI-2, 12:47501 (RA;US)

Corium
Fission product behavior in the TMI-2 core: preliminary evaluation of transport and chemistry, 12:47502 (RA;US)

Decontamination
Post-accident TMI-2 decontamination and defueling, 12:47503 (RA;US)

Fission Products
Fission product behavior in the TMI-2 core: preliminary evaluation of transport and chemistry, 12:47502 (RA;US)
Post-accident TMI-2 decontamination and defueling, 12:47503 (RA;US)

The release and transport of fission product cesium in the TMI-2 accident, 12:47505 (RA;US)
Leaching
The release and transport of fission product cesium in the TMI-2 accident, 12:47505 (RA;US)
Loss of Coolant
Post-accident TMI-2 decontamination and defueling, 12:47503 (RA;US)
TMI-2 reactor coolant system radionuclide accumulation rates, 12:47504 (RA;US)
Reactor Accidents
Insights on severe accident chemistry from TMI-2, 12:47501 (RA;US)
Reactor Cooling Systems
TMI-2 reactor coolant system radionuclide accumulation rates, 12:47504 (RA;US)

THREE-BODY PROBLEM
Adiabatic Approximation
Adiabatic representation of a three-body problem in the limit of separated atom in natural coordinates, 12:49039 (R;SU;In Russian)
Potentials
Asymptotics of the effective potentials and wave functions of a three-body problem in suitable coordinates, 12:49038 (R;SU;In Russian)
Reviews
Three-body forces and the trinucleons, 12:48949 (R;US)
Wave Functions
Asymptotics of the effective potentials and wave functions of a three-body problem in suitable coordinates, 12:49038 (R;SU;In Russian)

THROMBOCYTES
See BLOOD PLATELETS

THROMBOSIS
Pathogenesis
Effect of thrombopoetic substances on megakaryocyte metabolism, 12:48488 (RA;US)

THRUSTERS
Hybrid Systems
Electrothermal-electromagnetic hybrid thruster research, 12:48106 (J;US)
Magnetohydrodynamics
MPD thruster plasma instability studies, 12:48107 (J;US)
MHD Generators
Factors for MPD (magnetoplasma dynamic) thrustors. Annual report, 15 December 1983-14 December 1984, 12:48734 (R;US)
Performance
MPD thruster plasma instability studies, 12:48107 (J;US)

THULIUM 147
Beta Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)

THULIUM COMPLEXES
Stability
Complex formation of lanthanoids with citrate ligands, 12:48077 (RA;DD;In German)
Physico-chemical properties of lanthanoid-albumin complexes, 12:48075 (RA;DD;In German)

THULIUM ISOTOPES
See also THULIUM 147
Beta Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Proton Emission Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)

THYRISTORS
Computer-Aided Design
Finite element simulation and automated defect detection for thyristors: Final report, 12:47364 (R;US)

THYROID
Determination of normal TC-99 thyroid uptake with different background corrections, 12:48472 (RA;ZA)

TIGHT SANDS
See SANDSTONES

TIME-OF-FLIGHT METHOD
Detection of vapors of flammable liquids in air by atmospheric sampling mass spectrometry/mass spectrometry: Progress report, March 31, 1987, 12:47941 (R;US)

TIME-OF-FLIGHT SPECTROMETERS
Data Analysis
Analysis of inelastic neutron scattering spectra from a time-of-flight spectrometer with filter detector, 12:49006 (BA;GB)

TIN
Absorption Spectra
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)
Quantitative Chemical Analysis
Measured 1 to 40 keV photoabsorption cross sections for: Fe, Ni, Sn, Ta, Pt, Au, Pb, U, 12:48017 (BA;US)

TIN 110
Alpha Decay
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
Spin Orientation
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)

TIN 111
E1-Transitions
Role of quasiparticle x phonon components in gamma-decay of high-lying states, 12:48946 (R;SU)
E2-Transitions
Role of quasiparticle x phonon components in gamma-decay of high-lying states, 12:48946 (R;SU)
M1-Transitions
Role of quasiparticle x phonon components in gamma-decay of high-lying states, 12:48946 (R;SU)

TIN 114
Alpha Decay
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
Spin Orientation
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)

TIN 116
One-Nucleon Transfer Reactions
Anomalous two-neutron transfer cross sections at large separation in heavy ion reactions, 12:48961 (J;NL)
Two-Nucleon Transfer Reactions
Anomalous two-neutron transfer cross sections at large separation in heavy ion reactions, 12:48961 (J;NL)

TIN 116 TARGET
Alpha Reactions
Excitation of the isovector giant dipole by α-particle scattering, 12:48960 (J;US)

TIN 120 TARGET
Lithium 7 Reactions
Scattering of polarized /sup 7/Li by /sup 120/Sn and projectile-target spin-dependent interactions, 12:48880 (R;JP)

TIN ALLOYS
Electronic Structure
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Magnetic Properties
Band description of materials with localizing orbitals, 12:47858 (RA;US)
Powder Metallurgy
Mechanical properties of Cu-Nb and Cu-Nb/sub 3/Sn superconductors, 12:47820 (R;DE;In German)

TIN CHLORIDES
Polarography
Polarographic method for determining the contents of ascorbic acid and tin(II) chloride in the /sup 99m/Tc-MDP kit (MDP = methylene diphosphonate), 12:48068 (RA;DD;In German)

TIRES
Comparative Evaluations
Comparative EV performance with low-hysteresis and steel-belted radial tires, 12:47775 (RA;US)

TISSUE-EQUIVALENT DETECTORS
Proportional Counters
Development of a tissue-equivalent proportional-counter system for the measurement of neutron dose. Final report, 1986-1987, 12:48228 (R;US)

TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Physical Radiation Effects
Modeling of irradiation-induced amorphization in a titanate ceramic ($(CaPuTi_2O_7)$), 12:47901 (R;US)

TITANIUM
Crystal Structure
Impurities and defects in transition metals and their oxides, 12:47816 (RA;US)
Electronic Structure
Impurities and defects in transition metals and their oxides, 12:47816 (RA;US)
Magnetic Properties
Impurities and defects in transition metals and their oxides, 12:47816 (RA;US)

TITANIUM ALLOYS
Crystal Structure
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Melting
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Phase Studies
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)
Splat Cooling
Structure of rapidly solidified Ni-Ti, 12:47810 (R;US)

TITANIUM BORIDES
Sliding Friction
Unlubricated sliding wear of ceramic materials, 12:47876 (BA;US)
Wear
Unlubricated sliding wear of ceramic materials, 12:47876 (BA;US)

TITANIUM COMPOUNDS
See also TITANATES
TITANIUM BORIDES
TITANIUM NITRIDES
TITANIUM OXIDES
Dissociation
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Photochemical Reactions
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)
Thermodynamic Properties
Spectroscopic and thermodynamic investigations of transition-metal cluster ions in the gas phase; photodissociation of MFe^+, 12:48027 (J;US)

TITANIUM IONS
Electron-Ion Collisions
Distorted-wave calculations of the electron-impact ionization of highly ionized Na-like ions, 12:48730 (J;US)

TITANIUM NITRIDES
Ion Implantation
Optical measurement of the rms (root-mean-square) roughness of ion-bombarded surfaces. Final report, 1986-1987, 12:47807 (R;US)

TITANIUM OXIDES
Crystal Structure
Structural-electronic relationships in inorganic solids: powder neutron diffraction studies of the rutile and anatase polymorphs of titanium dioxide at 15 and 295 K, 12:48014 (J;US)
Electronic Structure
Structural-electronic relationships in inorganic solids: powder neutron diffraction studies of the rutile and anatase polymorphs of titanium dioxide at 15 and 295 K, 12:48014 (J;US)
Physical Radiation Effects
Modeling of irradiation-induced amorphization in a titanate ceramic ($(CaPuTi_2O_7)$), 12:47901 (R;US)
Raman Effect
Interference-enhanced Raman scattering from TiO_2/SiO_2 multilayers: measurement and theory, 12:47919 (J;US)

Design
Review of ORNL support for LLNL ETR effort (Engineering Test Reactor), 12:49116 (RA;US)
TIBER II/ETR: Nuclear Performance Analysis Group Report (TIBER II Engineering Test Reactor), 12:49056 (R;US)

Energy Spectra
Effect of deuteron temperature on iron forbidden line intensities in rf-heated tokamak plasmas, 12:49095 (R;US)
Environmental Effects
Background information and technical basis for assessment of environmental implications of magnetic fusion energy (Engineering Test Reactor), 12:49120 (RA;US)
First Wall
TIBER II/ETR: Nuclear Performance Analysis Group Report (TIBER II Engineering Test Reactor), 12:49056 (R;US)
Maintenance
Background information and technical basis for assessment of environmental implications of magnetic fusion energy (Engineering Test Reactor), 12:49120 (RA;US)
Physics
Proposal for ORNL physics support for Tiber (Engineering Test Reactor), 12:49117 (RA;US)
Planning
Proposed ORNL development and technology engineering test reactor roles (Engineering Test Reactor), 12:49119 (RA;US)
Plasma Confinement
Application of a two fluid theoretical plasma transport model on current tokamak reactor designs (TIBER II Engineering Test Reactor), 12:49106 (R;US)
Reactor Start-Up
Tokamak fusion reactor start-up simulation, 12:49147 (J;US)
Research Programs
FEDC/ORNL role in ETR design (Engineering Test Reactor), 12:49118 (RA;US)
Proposal for ORNL physics support for Tiber (Engineering Test Reactor), 12:49117 (RA;US)
Proposed ORNL development and technology engineering test reactor roles (Engineering Test Reactor), 12:49119 (RA;US)
TIBER II/ETR: Nuclear Performance Analysis Group Report (TIBER II Engineering Test Reactor), 12:49056 (R;US)
Safety
TIBER II/ETR: Nuclear Performance Analysis Group Report (TIBER II Engineering Test Reactor), 12:49056 (R;US)
Superconducting Coils
Tokamak fusion reactor start-up simulation, 12:49147 (J;US)
T Codes
Tokamak fusion reactor start-up simulation, 12:49147 (J;US)
Thermonuclear Ignition
Tokamak fusion reactor start-up simulation, 12:49147 (J;US)
Transport Theory
Application of a two fluid theoretical plasma transport model on current tokamak reactor designs (TIBER II Engineering Test Reactor), 12:49106 (R;US)

TOKYO SYNCHROTRON
1.3-Gev electron synchrotron.
Photonuclear Reactions
Recent experiments on photonuclear reactions at the Tokyo 1.3 GeV electron synchrotron, 12:48917 (R;JP)

TOLUENE
Chemisorption
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly reports for the period 1 April-30 September 1986, 12:47020 (R;US)

TOMOGRAPHY
See also COMPUTERIZED TOMOGRAPHY
Charge-Coupled Devices
The performance of CCD array detectors for application in high-resolution tomography, 12:48295 (BA;US)

TONSILS
See LYMPHATIC SYSTEM

TOTAL SUSPENDED PARTICULATES
Suspended particulate matter distribution, transport, and physical characteristics in the North Aleutian Shelf and St. George Basin lease areas, 12:47156 (R;US)

TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS

TOXIC MATERIALS
Risk Assessment
Mixtures of toxic agents and attributable risk calculations, 12:48519 (J;US)
Synergism
Mixtures of toxic agents and attributable risk calculations, 12:48519 (J;US)

TRACE ELEMENTS
See ELEMENTS

TRACK DETECTORS (DIELECTRIC)
See DIELECTRIC TRACK DETECTORS

TRACKLESS VEHICLES
Design
Planning aids for trackless vehicles for underground applications in black coal mining, 12:47094 (R;DE;In German)
Proceedings of the seminar on the ergonomics of locomotives and free-steered vehicles, 12:47093 (R;GB)
Human Factors Engineering
Proceedings of the seminar on the ergonomics of locomotives and free-steered vehicles, 12:47093 (R;GB)

TRACKS
See PARTICLE TRACKS

TRAINING
Evaluation
ARGX-87: Accident Response Group Exercise, 1987: A Broken Arrow mini exercise (Training), 12:48306 (R;US)

TRANSAMINASES
See AMINOTRANSFERASES

TRANSFER (HEAT)
See HEAT TRANSFER

TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

TRANSFERASES
Code number 2.
Biochemical Reaction Kinetics
Properties of human O^6-methylguanine-DNA methyltransferase, 12:48459 (J;US)
Chemical Properties
Properties of human O^6-methylguanine-DNA methyltransferase, 12:48459 (J;US)

TRANSFERRIN
Labelling
Stability constants of Fe-transferrin and Ga-transferrin complexes, 12:48074 (RA;DD;In German)

TRANSFORMATIONS (PHASE)
See PHASE TRANSFORMATIONS

TRANSFRONTIER CONTAMINATION
For radioactive contamination only; for nonradioactive pollution use TRANSFRONTIER POLLUTION.
Computerized Simulation
Validation of techniques for simulating long range dispersal and deposition of atmospheric pollutants based upon measurements after the Chernobyl accident. Transfrontier atmospheric models (TRANSAM), 12:49157 (R;NO)
Environmental Exposure Pathway
Recent findings about the Chernobyl reactor accident. Pt. 1 and 2. Pt. 1: Summary and evaluation of information provided on the plant and the course of the accident. Pt. 2: Radiological repercussions in the Federal Republic of Germany and other European countries. As of October 1986, 12:47471 (R;DE;In German)

TRANSIENTS
See also ELECTRICAL TRANSIENTS
Steady-State Conditions
Results of the PG-2 steam generator life tests at the BOR-60 reactor. Thermal and hydrodynamic characteristics under steady and transient conditions, 12:47423 (R;SU;In Russian)
Steam Generators
Results of the PG-2 steam generator life tests at the BOR-60 reactor. Thermal and hydrodynamic characteristics under steady and transient conditions, 12:47423 (R;SU;In Russian)

TRANSITION ELEMENT ALLOYS
Chemical Bonds
A bonding model for strong generalized Lewis acid-base interactions in intermetallics, 12:47989 (R;US)

TRANSITION ELEMENTS
See also CHROMIUM
COBALT
COPPER
GOLD

IRON
MOLYBDENUM
NICKEL
SILVER
TANTALUM
TITANIUM
TUNGSTEN
VANADIUM

Ultrafiltration
A study of micellar-enhanced ultrafiltration: Final technical report, March 1, 1984-February 28, 1987, 12:48424 (R;US)

TRANSITION METALS
See TRANSITION ELEMENTS

TRANSITIONS (ENERGY LEVEL)
See ENERGY-LEVEL TRANSITIONS

TRANSITIONS (PHASE)

TRANSURANIUM COMPOUNDS
See also PLUTONIUM COMPOUNDS
Photoemission
Design of a transuranic VUV spectrometer, 12:48284 (R;US)

TRANSURANIUM ELEMENTS
See also PLUTONIUM
Photoemission
Design of a transuranic VUV spectrometer, 12:48284 (R;US)
Radiation Monitoring
Development of a room air monitor system and workplace transuranic aerosol measurement system, 12:48391 (RA;US)

TRANSURANIUM WASTES
See ALPHA-BEARING WASTES

TRANSVAAL
Houses
Hot-water use in low-income households and the ability of integral solar water heaters to accommodate these requirements. Special report, 12:47648 (R;ZA)

TRAPS
Includes trapping of electrons or holes; see also FILTERS, ABSORBENTS, etc.
Design
Distributions of ions in axisymmetric traps, 12:48197 (RA;US)

TREES
See also OAKS
Biodegradation
Lake acidification, 12:48434 (J;US)

TRIBOLIUM
Biological Radiation Effects
Effect of irradiation and exposure to nitrogen on the mortality of adults. Tribolium confusum J. du V, 12:48492 (R;FR)
Mortality
Effect of irradiation and exposure to nitrogen on the mortality of adults. Tribolium confusum J. du V, 12:48492 (R;FR)

TRIPLET PARTICLES
See QUARKS

TRITIATED COMPOUNDS
See TRITIUM COMPOUNDS

TRITIUM
Diffusion
Migration in alluvium of chlorine-36 and tritium from an underground nuclear test, 12:48404 (R;US)
Leak Detectors
Process and system for detecting and measuring a tritium gas leak, 12:49146 (P;US)
Radiation Monitoring
Measurements of environmental radiations and radioactivities in Toki, 4, 12:48382 (R;JP;In Japanese)
Radioecological Concentration
Measurements of environmental radiations and radioactivities in Toki, 4, 12:48382 (R;JP;In Japanese)

TRITIUM COMPOUNDS
Bubbles
NMR evidence for solid-fluid transition near 250 K of ^{3}He bubbles in palladium tritide (NUCLEAR MAGNETICRESONANCE), 12:47872 (J;US)
Chemical Preparation
Synthesis of dl-dehydro leucine and dl-dehydro leucine hydrochloride, 12:48062 (RA;DD;In German)
Synthesis of [2-/sup 3/H]glycerol, 12:48064 (RA;DD;In German)
Tritium-labelling of 1,8-dihydroxy-9-anthrone by catalytic exchange, 12:48063 (RA;DD;In German)
Radioecological Concentration
Annual environmental monitoring report of the Lawrence Berkeley Laboratory, 1986, 12:48501 (R;US)

TRITIUM RECOVERY
In thermonuclear reactors and/or devices.
Mathematical Models
Mixing and mass transfer in bubble extractor: its application to tritium extraction from 17Li83Pb, 12:49129 (R;FR)

TRITIUM TARGET
Electron Reactions
Electron interactions with nuclei: Progress report, 12:48867 (R;US)
Radiation Doses
Tritium exposure problems from an accelarator gas target, 12:48500 (RA;ZA)

TRITONS
Deuteron Reactions
Model for the nuclear effects of the d-t-muon fusing state, 12:48875 (R;US)
Particle Production
Production of deuterons and tritium nuclei with the 0.6-1.83 GeV/c momenta on Be, Al, Cu, Ta nuclei at the 119 deg angle by 10 GeV protons, 12:48872 (R;SU;In Russian)

TRU WASTES
See ALPHA-BEARING WASTES

TRUCKS
Waste Transportation
Study of joint use of vehicles for transportation of hazardous and nonhazardous materials. A report to Congress, 12:47585 (R;US)

TRX-1
See REVERSE-FIELD PINCH

TSP
See TOTAL SUSPENDED PARTICULATES

TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Cracks
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
In-Service Inspection
Ferromagnetic material inspection for feedwater heater and condenser tubes, 12:47386 (RA;US)
Preliminary technical assessment of an inflatable inspection probe - phase II, 12:47387 (RA;US)
Intergranular Corrosion
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
Nondestructive Testing
Ferromagnetic material inspection for feedwater heater and condenser tubes, 12:47386 (RA;US)
Preliminary technical assessment of an inflatable inspection probe - phase II, 12:47387 (RA;US)
PWR steam generator tubing sample library, 12:47415 (RA;US)
Stress Corrosion
Intergranular corrosion mechanisms of alloy 600: Final report, 12:47434 (R;US)
TUBES (CONDUITS)
See PIPES
TUFF
Geophysical Surveys
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
Radionuclide Migration
The transport of uranium and technetium through the unsaturated tuffs, Yucca Mountain, Nevada, 12:47212 (R;US)
Site Characterization
Survey of geophysical techniques for site characterization in basalt, salt and tuff, 12:47227 (R;US)
TUMOR CELLS
Survival Time
Tumor radiobiology, 12:48475 (RA;US)
TUMORS
See NEOPLASMS
TUNGSTEN
Beam Optics
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Deposition
Normal incidence reflection multilayer optics for solar soft x-ray/extreme ultraviolet (XUV) observations, 12:47853 (BA;US)
Electron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
Positron Collisions
Observation of elastic scattering of positrons and electrons at glancing incidence, 12:49004 (J;US)
TUNGSTEN 170
E2-Transitions
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
High Spin States
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
Quadrupole Moments
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
TUNGSTEN 172
E2-Transitions
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
High Spin States
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
Quadrupole Moments
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
TUNGSTEN BASE ALLOYS
Point Defects
Investigation of point defects after low temperature irradiation and qenching in diluted W/sup 57/Co alloys, 12:47821 (R;DE;In German)
TUNGSTEN BRONZE
Electro-Optical Effects
Progress toward a crystal streak camera using tungsten bronze crystals for the electrooptic material, 12:48292 (R;US)
TUNGSTEN OXIDES
Absorption Spectra
Structure of surface tungsten oxide species in the WO_3/Al_2O_3 supported oxide system from x-ray absorption near-edge spectroscopy and Raman spectroscopy, 12:47875 (J;US)
Crystal Structure
Structure of surface tungsten oxide species in the WO_3/Al_2O_3 supported oxide system from x-ray absorption near-edge spectroscopy and Raman spectroscopy, 12:47875 (J;US)
Raman Spectra
Structure of surface tungsten oxide species in the WO_3/Al_2O_3 supported oxide system from x-ray absorption near-edge spectroscopy and Raman spectroscopy, 12:47875 (J;US)
Surface Properties
Structure of surface tungsten oxide species in the WO_3/Al_2O_3 supported oxide system from x-ray absorption near-edge spectroscopy and Raman spectroscopy, 12:47875 (J;US)
TUNNELING MACHINES
Cutting Tools
Effects of high-pressure water jets on the performance of boom-type tunnelling machines, 12:47076 (R;XE)
Jets
Effects of high-pressure water jets on the performance of boom-type tunnelling machines, 12:47076 (R;XE)
TURBINE BLADES
Coatings
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
Corrosion
High-temperature hot-corrosion control by fuel additives (contaminated fuels). Final report, October 1985-December 1986, 12:47140 (R;US)
Erosion
Erosion resistant coatings for steam turbines: Final report, 12:47342 (R;US)
Nondestructive Testing
Flexible eddy current coil arrays, 12:47396 (RA;US)
Unsteady Flow
Experimental determination of the vibration-exciting forces in two turbine blade profiles, 12:47349 (R;DE;In German)
TURBOMACHINERY
Design
CAES Turbomachinery observations, 12:47556 (RA;US)
Unsteady Flow
Contribution to the representation of circumferential flow instabilities and feed disturbances in axial compressors, 12:48130 (R;DE;In German)
TURBULENT FLOW
Acoustic Measurements
Measurement of the turbulent impulse- and salt transport in the mixing zone of the river Elbe, 12:48428 (R;DE;In German)
TVO-1 REACTOR
Prior to 1976, OLKILUOTO REACTOR was used.
Reactor Operation
Operation of Finnish nuclear power plants. 3. Quarterly report 1986, 12:47409 (R;FI)
TVO-2 REACTOR
Reactor Operation
Operation of Finnish nuclear power plants. 3. Quarterly report 1986, 12:47409 (R;FI)
TWO-BODY PROBLEM
Analytical Solution
Lewis structures and Feynman diagrams: the treatment of geminal correlation in Fock space, 12:49016 (RA;US)

U

VIRUSES
DNA Sequencing
Transcriptional promoter and enhancer elements in the long terminal repeats (LTR) of endogenous murine leukemia virus (MuLV)-related proviral sequences, 12:48460 (J;US)
VITAMIN C
See ASCORBIC ACID
VK-50 REACTOR
Dimitrovgrad, USSR
Reactor Cooling Systems
Distribution of radioactive fission products within the VK-50 NPP circuit when operating with non-failed fuel elements, 12:47407 (R;SU;In Russian)
VOCABULARY (CONTROLLED)
See STANDARDIZED TERMINOLOGY
VOCATIONAL TRAINING
See TRAINING
VOLCANOES
Environmental Effects
Effect of the El Chichon volcanic cloud on the surface radiative regime in central Alaska, 12:48543 (J;US)
Eruption
Effect of the El Chichon volcanic cloud on the surface radiative regime in central Alaska, 12:48543 (J;US)
VOLTAIC CELLS
See ELECTRIC BATTERIES
VOLUME
Reduction
Characteristics of medically related low-level radioactive waste, 12:48467 (R;US)
VORTEX FLOW
Prior to October 1981 this concept was indexed to SWIRL FLOW.
Flow Models
Point vortex dynamics: Recent results and open problems, 12:48738 (R;US)

W

W CODES
Translators
Language translation and software maintenance, 12:49189 (RA;US)
W MINUS BOSONS
Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.
Angular Distribution
Angular distribution of W boson pairs at a heavy Z-resonance, 12:48775 (R;US)
Pair Production
Angular distribution of W boson pairs at a heavy Z-resonance, 12:48775 (R;US)

W PLUS BOSONS
Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.
Angular Distribution
Angular distribution of W boson pairs at a heavy Z-resonance, 12:48775 (R;US)
Pair Production
Angular distribution of W boson pairs at a heavy Z-resonance, 12:48775 (R;US)
WARFARE
See also BIOLOGICAL WARFARE
CHEMICAL WARFARE
Terrorism
Combating terrorism - a response in kind. Student essay, 12:47800 (R;US)
WASTE DISPOSAL

MARINE DISPOSAL
RADIOACTIVE WASTE DISPOSAL
SANITARY LANDFILLS
Abandoned Sites
Superfund Record of Decision (EPA Region 3): Drake Chemical Site (Phase 2), Lock Haven, Clinton County, Pennsylvania (second remedial action), May 1986. Final report, 12:48445 (R;US)
Ground Disposal
Permit guidance manual on unsaturated zone monitoring for hazardous-waste land-treatment units. Final report, 12:48418 (R;US)
Land Pollution
Superfund Record of Decision (EPA Region 2): Lang Property, Pemberton Township, New Jersey, September 1986. Final report, 12:48447 (R;US)
Superfund Record of Decision (EPA Region 4) Gallaway Ponds Site, Gallaway, Tennessee, September 1986. Final report, 12:48448 (R;US)
Superfund Record of Decision (EPA Region 1): Baird and McGuire, Holbrook, Massachusetts, September 1986. Final report, 12:48415 (R;US)
Superfund Record of Decision (EPA Region 2): Marathon Battery Company site, Cold Spring, Putnam County, New York, September 1986. Final report, 12:48449 (R;US)
Pollution Control
ROD (Record of Decision) annual report, FY 1986, 12:48417 (R;US)
Ponds
Superfund Record of Decision (EPA Region 2): Florence Land Recontouring (FLR) landfill, Florence, Mansfield, and Springfield, New Jersey, June 1986. Final report, 12:48412 (R;US)
Superfund Record of Decision (EPA Region 4) Gallaway Ponds Site, Gallaway, Tennessee, September 1986. Final report, 12:48448 (R;US)
Sanitary Landfills
Superfund Record of Decision (EPA Region 4): A. l. Taylor site (Valley of the Drums), Bullitt County, Kentucky, June 1986. Final report, 12:48413 (R;US)
Superfund Record of Decision (EPA Region 5): Lake Sandy Jo/M and M landfill, Lake County, Indiana, September 1986. Final report, 12:48414 (R;US)
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)
Water Pollution
Superfund Record of Decision (EPA Region 3): Bruin Lagoon Site, Bruin Borough, Pennsylvania (second remedial action), September 1986. Final report, 12:48444 (R;US)
Superfund Record of Decision (EPA Region 2): Lang Property, Pemberton Township, New Jersey, September 1986. Final report, 12:48447 (R;US)
Superfund Record of Decision (EPA Region 5): Lake Sandy Jo/M and M landfill, Lake County, Indiana, September 1986. Final report, 12:48414 (R;US)
Superfund Record of Decision (EPA Region 1): Baird and McGuire, Holbrook, Massachusetts, September 1986. Final report, 12:48415 (R;US)
Superfund Record of Decision (EPA Region 2): Marathon Battery Company site, Cold Spring, Putnam County, New York, September 1986. Final report, 12:48449 (R;US)
Superfund Record of Decision (EPA Region 1): Auburn Road Landfill, Londonderry, New Jampshire, September 1986. Final report, 12:48416 (R;US)
WASTE DISPOSAL ACTS
For nonradioactive wastes. For radioactive wastes, use NUCLEAR WASTE POLICY ACTS.
Implementation
Plans and schedules for implementation of US Nuclear Regulatory Commission responsibilities under the Low-Level Radioactive Waste Policy Amendments Act of 1985 (P.L. 99-240), 12:47595 (R;US)
WASTE MANAGEMENT
See also RADIOACTIVE WASTE MANAGEMENT
WASTE DISPOSAL
WASTE TRANSPORTATION
Feasibility Studies
Laboratory protocol to demonstrate equivalency for plant wastewater cotreatment: Final report, 12:47358 (R;US)
Planning
Preliminary long-range environmental management plan: Program overview and summary, 12:47582 (R;US)
Pollution Abatement
From pollution to prevention: a progress report on waste reduction. Special report, 12:47584 (R;US)
WASTE OILS
Waste Disposal
Superfund Record of Decision (EPA Region 3): Bruin Lagoon Site, Bruin Borough, Pennsylvania (second remedial action), September 1986. Final report, 12:48444 (R;US)
WASTE PRODUCT UTILIZATION
Characterization, extraction, and reuse of coal-gasification solid wastes. Volume 3. Technical and economic feasibility of bulk utilization and metal recovery for ashes from an integrated coal-gasification facility. Final report, April 1983-June 1986, 12:47059 (R;US)
Investigation of the energy value of automobile shredder residue, 12:47673 (R;US)
WASTE SOLUTIONS
See LIQUID WASTES
WASTE TRANSPORTATION
Regulations
Study of joint use of vehicles for transportation of hazardous and nonhazardous materials. A report to Congress, 12:47585 (R;US)
WASTE WATER
Chemical Composition
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis; Residual brine treated by wet-air oxidation, 12:47191 (R;US)
Proposed water treatment approach for commercial tar sand wastewaters, 12:47188 (R;US)
Oxidation
Wet-air oxidation of TS-1S wastewater, 12:47189 (R;US)
Quantitative Chemical Analysis
Organic solute profile of water from two commercial tar sand processes, 12:47190 (R;US)
Recycling
Proposed water treatment approach for commercial tar sand wastewaters, 12:47188 (R;US)
Toxicity
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis; Residual brine treated by wet-air oxidation, 12:47191 (R;US)
Review of toxicity studies performed on an underground coal gasification condensate water, 12:47016 (R;US)
Water Treatment
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis; Residual brine treated by wet-air oxidation, 12:47191 (R;US)
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)
Proposed water treatment approach for commercial tar sand wastewaters, 12:47188 (R;US)

Review of toxicity studies performed on an underground coal gasification condensate water, 12:47016 (R;US)
Wet-air oxidation of TS-1S wastewater, 12:47189 (R;US)
Water Treatment Plants
Waste-water characterization and hazardous-waste survey, Castle AFB, California. Final report, 22-27 September 1986, 12:48423 (R;US)

GASKICK - a knowledge based system for drilling supervision and gas kick detection, 12:47142 (R;NO)
WENDELSTEIN-7 STELLARATOR
Electric Fields
On the theory of the electrical field and the plasma rotation in the stellarator, 12:49067 (R;DE;In German)

Rotating Plasma
On the theory of the electrical field and the plasma rotation in the stellarator, 12:49067 (R;DE;In German)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WESTERN EUROPE
See also FEDERAL REPUBLIC OF GERMANY
FRANCE
UNITED KINGDOM
Air Quality
Air-quality standard for SO_2 and particles (Directive 80/779/EEC) and its significance for the other main air pollutants, 12:48364 (R;XE)
Role of nitrogen oxides in nonurban ozone formation in the planetary boundary layer over N (North) America, W (Western) Europe, and adjacent areas of ocean, 12:48357 (R;US)
Natural Gas
Western European natural gas market. Effects of import diversification constraints, 12:47169 (R;NO)
WHOLE-BODY COUNTERS
Commissioning of a chair-type whole-body counter at Pelindaba, 12:48239 (RA;ZA)
WIGGLER MAGNETS
Magnetic Fields
Analysis of undulator field errors for XUV FELs [extreme ultraviolet free electron lasers], 12:48208 (R;US)
WILDERNESS AREAS
See NATURE RESERVES
WIND
Mathematical Models
Modification of wind speed and IBL-heights in a coastal region, 12:47336 (R;SE)
Statistical analysis of gust characteristics, 12:47337 (R;SE)
Probabilistic Estimation
Statistical analysis of gust characteristics, 12:47337 (R;SE)
Velocity
Modification of wind speed and IBL-heights in a coastal region, 12:47336 (R;SE)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See WIND TURBINES
WIND LOADS
Mathematical Models
Estimation of lateral and vertical coherence for the Naesudden wind turbine, 12:47339 (R;SE)
WIND TURBINES
See also VERTICAL AXIS TURBINES
Wind Loads
Estimation of lateral and vertical coherence for the Naesudden wind turbine, 12:47339 (R;SE)
WINDOWS
Energy Consumption
Windows as energy-collectors. Relationship between energy consumption area and orientation of windows in a housing estate, 12:47321 (R;DK;In Danish)
Fabrication
Hydrofluoric acid-resistant composite window and method for its fabrication, 12:47660 (P;US)
Laser Welding
Laser sealed vacuum insulation window, 12:47661 (P;US)
Thermal Insulation
Laser sealed vacuum insulation window, 12:47661 (P;US)
WISCONSIN
Peat
An inventory of the peat resources of the State of Wisconsin: Final report, 12:47121 (R;US)
WOLFRAM
See TUNGSTEN
WOOD
Harvesting
Model for optimising the use of wood raw material, 12:47270 (R;FI;In Finnish)
Prices
Model for optimising the use of wood raw material, 12:47270 (R;FI;In Finnish)
Procurement
Model for optimising the use of wood raw material, 12:47270 (R;FI;In Finnish)
Transport
Delivery and distribution of the domestic solid fuels in the North-Ostrobotnia, 12:47268 (R;FI;In Finnish)
WOOD ALCOHOL
See METHANOL
WOOD BURNING APPLIANCES
Pollutants
IACP (Integrated Air Cancer Project) emissions: transformations and fate, 12:48358 (R;US)
Wood Wastes
Understanding wood wastes as fuel. Technical paper, 12:47271 (R;US)
WOOD FUELS
Use of this term is limited to policy, feasibility, and socio-economic studies. For wood properties use WOOD.
Power Generation
Competitiveness of domestic fuels in the year 1986, 12:47105 (R;FI;In Finnish)
Prices
Delivery and distribution of the domestic solid fuels in the North-Ostrobotnia, 12:47268 (R;FI;In Finnish)
WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Economic Analysis
Model for optimising the use of wood raw material, 12:47270 (R;FI;In Finnish)
Power Demand
Use of natural gas diesel engines in mechanical pulp production. A prelimminary study, 12:47700 (R;FI;In Finnish)
Raw Materials
Model for optimising the use of wood raw material, 12:47270 (R;FI;In Finnish)
WOOD WASTES
Compacting
Understanding wood wastes as fuel. Technical paper, 12:47271 (R;US)
Fuels
Understanding wood wastes as fuel. Technical paper, 12:47271 (R;US)
WOOD-FUEL POWER PLANTS
Planning
Rural electricity in the Philippines - planning issues, 12:47272 (J;GB)
WORKING FACES
Monitoring
Face ends - minimization of layout constraints, 12:47082 (R;XE;In German)
WORKMENS COMPENSATION
Cost Estimation
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)
Legislation
Cost of compensating asbestos victims under the Occupational Disease Compensation Act of 1983, 12:47587 (J;US)
WWER TYPE REACTORS
See also LOVIISA-1 REACTOR
LOVIISA-2 REACTOR
ROVNO-2 REACTOR
Fuel Rods
Technique and code for calculation of unsteady two-dimensional temperature fields in a cylindrical fuel element, 12:47417 (R;SU;In Russian)
WYOMING
See also POWDER RIVER BASIN
Petroleum Deposits
Relation of sedimentologic features and reservoir quality in a shelf ridge sandstone deposit - comparison of outcrop and subsurface properties, 12:47129 (J;US)
Sandstones
Geological characterization and statistical comparison of outcrop and subsurface facies: Shannon shelf sand ridges: Topical report, 12:47124 (R;US)

X

XENON
Cooling
Shock-induced cooling in dense fluids, 12:47913 (R;US)
Shock Waves
Shock-induced cooling in dense fluids, 12:47913 (R;US)
Thermal Diffusion
Mound activities in chemical and physical research: January-June 1987 (He(Xe)-CO_3), 12:47991 (R;US)
XENON 133
Isotope Production
/sup 99/Mo production at AMOR-1 in the years 1984 to 1985, 12:47250 (RA;DD;In German)
Radioecological Concentration
Real time air assay of radionuclides by cryogenics, 12:48395 (RA;US)
XENON ISOTOPES
See also XENON 133
Deformed Nuclei
Octupole instability in the heavy barium region, 12:48902 (R;US)
High Spin States
Octupole instability in the heavy barium region, 12:48902 (R;US)
X-RAY RADIOGRAPHY
Cineradiography, 12:48260 (R;US)

Y

YAYOI REACTOR
Coordinated Research Programs
Report of the research results with University of Tokyo, Nuclear Engineering Research Laboratory's Facilities in fiscal 1985, 12:49161 (R;JP;In Japanese)
YELLOW CAKE
See URANIUM OXIDES U3O8
YTTERBIUM
Ion-Atom Collisions
L- and M-shell x-ray production cross sections of Nd, Gd, Ho, Yb, Au, and Pb by 25-MeV carbon and 32-MeV oxygen ions, 12:48731 (J;US)
YTTERBIUM 151
Beta Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
Proton Emission Decay
Radioactivities with 146 ≦A ≦152 investigated at the OASIS facility: Evidence for ^{147}Tm β-decay, 12:48886 (R;US)
YTTERBIUM 158
High Spin States
Energetic M1 transitions as a probe of nuclear collectivity at high temperatures, 12:48890 (R;US)
M1-Transitions
Energetic M1 transitions as a probe of nuclear collectivity at high temperatures, 12:48890 (R;US)
YTTERBIUM 159
E2-Transitions
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
High Spin States
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
Quadrupole Moments
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
YTTERBIUM 160
E2-Transitions
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
High Spin States
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
Quadrupole Moments
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
YTTERBIUM 161
E2-Transitions
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
High Spin States
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
Quadrupole Moments
Nuclear collectivity at high spins determined from lifetime measurements, 12:48891 (R;US)
YTTERBIUM 164
Alpha Decay
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
Spin Orientation
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
YTTERBIUM 170
Alpha Decay
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
Spin Orientation
Spin and temperature dependence of nuclear deformation using alpha-gamma angular correlations, 12:48903 (R;US)
YTTERBIUM COMPLEXES
Stability
Physico-chemical properties of lanthanoid-albumin complexes, 12:48075 (RA;DD;In German)
YTTERBIUM OXIDES
Crystal Structure
Structural and dynamical studies of δ-Bi_2O_3 oxide ion conductors. IV. An EXAFS investigation of (Bi2O3)/sub 1-x/(M_2O_3)/sub x/ for M = 7, Er, and Yb, 12:47874 (J;US)
Electronic Structure
Structural and dynamical studies of δ-Bi_2O_3 oxide ion conductors. IV. An EXAFS investigation of (Bi2O3)/sub 1-x/(M_2O_3)/sub x/ for M = 7, Er, and Yb, 12:47874 (J;US)
YTTRIUM 90
Beta Dosimetry
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
Beta Spectroscopy
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
Energy Spectra
Beta spectroscopy with liquid scintillation systems: applications in dosimetry of ^{90}Sr and ^{90}Y, 12:48272 (J;GB)
Radioisotope Generators
Investigation of a 1850-MBq-/sup 90/Sr//sup 90/Y-generator, 12:47251 (RA;DD;In German)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM CHLORIDES
Hydridation
Hydrides of the double metal-layered monohalides: structural and bonding features of Zr_2Br_2H, ZrBrH and YClH/sub z/ type phases, 12:47259 (J;CH)
Structural Chemical Analysis
Hydrides of the double metal-layered monohalides: structural and bonding features of Zr_2Br_2H, ZrBrH and YClH/sub z/ type phases, 12:47259 (J;CH)
YTTRIUM COMPLEXES
Stability
Calculation of the composition of yttrium citrate solutions, 12:48076 (RA;DD;In German)
YTTRIUM OXIDES
Crystal Structure
Stability analysis of special-point ordering in the basal plane of YBa_2Cu_3O/sub 7-//sub δ/, 12:47865 (J;US)

Structural and dynamical studies of δ-Bi_2O_3 oxide ion conductors. IV. An EXAFS investigation of (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ for M = 7, Er, and Yb, 12:47874 (J;US)
Structural and superconducting properties of orthorhombic and tetragonal YBa_2Cu_3O/sub 7-//sub x/: The effect of oxygen stoichiometry and ordering on superconductivity, 12:47866 (J;US)
Structure-property relationships for RBa_2Cu_3/O/sub x/ phases (R = Y, La, Nd, Er), 12:47855 (R;US)

Electronic Structure
Structural and dynamical studies of δ-Bi_2O_3 oxide ion conductors. IV. An EXAFS investigation of (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ for M = 7, Er, and Yb, 12:47874 (J;US)

Energy Gap
Photoemission search for the superconducting energy gap of high-T/sub c/$YBa_2Cu_3O_7$, 12:47869 (J;US)

Fabrication
Shock-induced chemical synthesis of phases similar to the high temperature superconductor oxides ((La-Sr-Cu-O) and (Y-Ba-Cu-O)), 12:47862 (R;US)

Hydrogenation
Superconductivity in H/sub x/$YBa_2Cu_3O_7$, 12:47871 (J;US)

Photoemission
Photoemission search for the superconducting energy gap of high-T/sub c/$YBa_2Cu_3O_7$, 12:47869 (J;US)

Specific Heat
Specific heat of the high T/sub c/ superconductors $(La,M)_2CuO_4$ and $YBa_2Cu_3O_7$ in magnetic fields, 12:47859 (R;US)
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)

Superconductivity
Structural and superconducting properties of orthorhombic and tetragonal YBa_2Cu_3O/sub 7-//sub x/: The effect of oxygen stoichiometry and ordering on superconductivity, 12:47866 (J;US)

Thermal Expansion
Thermal properties of the high-T/sub c/ superconductors La/sub 1.85/Sr/sub 0.15/CuO_4 and $YBa_2Cu_3O_7$, 12:47870 (J;US)

Transition Temperature
Superconductivity in H/sub x/$YBa_2Cu_3O_7$, 12:47871 (J;US)

YUCCA MOUNTAIN

Geochemical Surveys
Distribution and chemistry of diagenetic minerals at Yucca Mountain, Nye County, Nevada, 12:47213 (R;US)

Z

Z NEUTRAL BOSONS
Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.

Pair Production
Gluon production of gauge bosons, 12:48776 (R;US)

Radiative Decay
On account for contribution from anomalous Zyll interaction in e/sup +/e/sup -/ -> νν-barγ process, 12:48793 (R;SU)

ZEOLITES
See also MORDENITE

Catalytic Effects
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)

Crystal Structure
Inelastic neutron scattering from tetramethylammonium cations occluded within zeolites, 12:48006 (J;US)

Sorptive Properties
A modeling study of vacuum sorption characteristics of carbon dioxide on 4A zeolite molecular sieves, 12:47940 (R;US)

Specificity
Coal gasification: Direct applications and syntheses of chemicals and fuels: A research needs assessment, 12:47014 (R;US)

ZERO POWER REACTORS
See also ORNL-PCA REACTOR
MAKET zero power reactor, 12:47455 (R;SU;In Russian)

ZET PINCH
See LONGITUDINAL PINCH

ZINC OXIDES

Electrolysis
Study of the use of Y_2O_3 doped ZrO_2 membranes for solar electrothermal and solar thermal separations. Technical report, 12:47318 (R;US)

ZINC SELENIDES

Photoconductivity
Photoconductivity spectrum of p-type intrinsic-defective zinc selenide, 12:48995 (RA;SU;In Russian)

ZINC SULFIDES

Crystal Structure
Application of the variational cellular method to semiconductors: the ZnS case, 12:47961 (RA;US)

Electronic Structure
Application of the variational cellular method to semiconductors: the ZnS case, 12:47961 (RA;US)

ZINC-BROMINE BATTERIES

Design
Testing of a 30 kWh zinc-bromine electric vehicle battery, 12:47762 (RA;US)
Zinc-bromine battery efficiency, 12:47568 (BA;US)

Electrodes
Zinc-bromine battery efficiency, 12:47568 (BA;US)

Electrolytes
Zinc-bromine battery efficiency, 12:47568 (BA;US)

Energy Efficiency
Zinc-bromine battery efficiency, 12:47568 (BA;US)

Performance Testing
Testing of a 30 kWh zinc-bromine electric vehicle battery, 12:47762 (RA;US)

ZIRCONIUM ALLOYS

Microstructure
Processing and superplasticity in lithium-containing Al-Mg alloys. Master's thesis, 12:47806 (R;US)

Tensile Properties
Tensile behavior of superplastic Al-Cu-Li-Zr alloy 2090 at cryogenic temperatures, 12:47826 (R;US)

ZIRCONIUM BROMIDES

Hydridation
Hydrides of the double metal-layered monohalides: structural and bonding features of Zr_2Br_2H, ZrBrH and YClH/sub z/ type phases, 12:47259 (J;CH)

Structural Chemical Analysis
Hydrides of the double metal-layered monohalides: structural and bonding features of Zr_2Br_2H, ZrBrH and YClH/sub z/ type phases, 12:47259 (J;CH)

ZIRCONIUM OXIDES

Chemical Properties
High conductivity glass electrolytes for sodium/sulfur batteries, 12:47573 (BA;US)

Fatigue
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)

Ionic Conductivity
High conductivity glass electrolytes for sodium/sulfur batteries, 12:47573 (BA;US)

Permeability
Study of the use of Y_2O_3 doped ZrO_2 membranes for solar electrothermal and solar thermal separations. Technical report, 12:47318 (R;US)

Stress Analysis
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)

Thermodynamic Properties
Fatigue behavior of partially stabilized zirconia ceramics, 12:47878 (BA;US)

Ultrasonic Testing
NDE [nondestructive evaluation] of advanced structural ceramics, 12:48135 (R;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form DE82000001 or TI82000001 appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the document quality for microfiche (MF) and printed copy (PC) production: 1 = 92 to 95% legibility, available PC and MF; 2 = 88 to 91% legibility, available MF only; 3 = 87% or less legibility, available PC only. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS).

FILE NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by file number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE87003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) and other price codes are for domestic users; prices for foreign purchasers are, in most instances, twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($6.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for PR-360-4.

MICROFICHE		EXCEPTIONAL		MAGNETIC TAPES		DISKETTES	
A01	$6.50	E01	$7.50	T01	$150.00	D01	$ 50
PAPER COPY		E02	10.50	T02	175.00	D02	75

PRICES EFFECTIVE JANUARY 1, 1987

U. S. DEPARTMENT OF COMMERCE

National Technical Information Service

5285 Port Royal Road, Springfield, Virginia 22161

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 87-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

DOE CURRENT AWARENESS BULLETINS

TIMELY INFORMATION FOR RESEARCHERS IN SPECIALIZED SUBJECT AREAS

To keep science, industry, the government, and the public up to date on worldwide energy literature, the DOE Office of Scientific and Technical Information publishes a series of Current Awareness Bulletins on various aspects of energy production and use. The information abstracted in these bulletins comes from scientific and technical reports, journal articles, conference papers and proceedings, patents, theses, books, and monographs. The semimonthly bulletins are:

ACID PRECIPITATION (PB87-901000) Wet and dry deposition, long-range transport, environmental effects, modeling, and socioeconomic factors.

BUILDINGS ENERGY TECHNOLOGY (PB87-900700) Technology required for economic energy conservation in buildings of all types.

COAL-BASED SYNFUELS (PB87-901400) Conversion of coal to gaseous or liquid fuels.

COAL COMBUSTION AND UTILIZATION (PB87-914400) All aspects of coal combustion and direct utilization, including fluidized-bed combustion, MHD generators, and coal fuel cells.

COAL PREPARATION AND POLLUTION CONTROL (PB87-900800) Coal cleaning and the technology of reducing air pollution from the direct combustion of coal.

DIRECT ENERGY CONVERSION (PB87-946600) Photovoltaic conversion, magnetohydrodynamics, electrohydrodynamics, thermoelectric generators, thermionic converters, fuel cells, etc.

ENERGY FROM BIOMASS (PB87-900600) Biomass production, conversion, and use for energy.

GEOTHERMAL ENERGY TECHNOLOGY (PB87-914700) Technology required for economic recovery of geothermal energy and its use, either directly or to produce electricity.

HEAVY-ION REACTIONS (PB87-900500) All aspects of heavy-ion ($A > 4$) reactions.

LASER RESEARCH (PB87-901100) Research and development, excluding applications.

NUCLEAR FUEL CYCLE (PB87-913400) Uranium reserves, ore exploration, mining, processing, and enrichment; spent-fuel reprocessing; nuclear materials management and safeguards; nuclear fuel fabrication and properties; and environmental and health and safety aspects.

NUCLEAR REACTOR SAFETY (PB87-913500) Accident analysis, safety systems, radiation protection, decommissioning and dismantling, and security measures.

RADIOACTIVE WASTE MANAGEMENT (PB87-902900) Spent-fuel transport and storage, radioactive effluents from nuclear facilities, techniques of processing radioactive wastes, and ultimate disposal of the wastes.

SOLAR THERMAL ENERGY TECHNOLOGY (PB87-901200) Research and development relating to the use of solar thermal systems as a significant energy source.

TRANSPORTATION ENERGY RESEARCH (PB87-900900) Engineering and design of energy-efficient automotive propulsion systems and all aspects of energy conservation in transportation.

UNCONVENTIONAL PETROLEUM (PB87-901300) Secondary and tertiary recovery of petroleum and oil shales and tar sands.

Bulletins are available by subscription from the National Technical Information Service, U. S. Department of Commerce, Springfield, VA 22161. Subscription rates for one year (24 issues) are $80.00 for domestic subscribers and $160.00 for subscribers outside the United States, Canada, and Mexico. Use the order number given in parentheses after the bulletin title.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
